THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSEYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXIX. NO. 1

NEW YORK AND CHICAGO, JANUARY 1, 1910

One Dollar Per Year

SELECT FERNS

For Fine Store Trade

We offer a grand lot of exceptionally well-grown plants of the different varieties of

NEPHROLEPIS

which will be found one of the best-selling and most profitable plants that florists can handle. Our stock is in unusually fine shape, and we will guarantee it will please the most exacting, as it is exceptionally good value at the prices quoted.

Improved Elegantissima. The finest of all this type. It was introduced by us in 1905. This form of *Elegantissima* has been greatly improved, and shows no tendency to revert to the Boston, making it the most valuable fern of this type.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8-in., \$12.00 to \$18.00 per dozen—according to size.

Superbissima. Introduced by us in 1908. A very unique and distinct novelty. Its distinguishing characteristics are its dark green foliage and dense growth. Fronds are very heavily imbricated, making them very dense and compact.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8-in., \$12.00 to \$18.00 per dozen—according to size.

Bostoniensis, Piersoni, Whitmani, Scottii—Extra fine plants, 6-in. pots, \$6.00 per dozen; 8-in. pans, \$12.00 per dozen.

F. R. PIERSON CO. Tarrytown-on-Hudson
New York

Please mention the Exchange when writing.

A. N. PIERSON, Inc. Cromwell, Conn.

Our Catalogue for 1910 is out and we wish to call attention to the many good things offered therein. As usual, we are making a specialty of **grafted and own-root** Roses. We have arranged to graft 350,000 Rose plants this year. We call special attention to the following:

WHITE KILLARNEY (Waban Strain)

Grafted.....	\$2.00 per doz.	\$15.00 per 100	\$120.00 per 1000
Own-Root.....	1.50 "	8.00 "	75.00 "

KILLARNEY

Grafted.....	\$2.00 per doz.	\$15.00 per 100	\$120.00 per 1000
Own-Root.....	1.00 "	5.00 "	45.00 "

MY MARYLAND

Grafted.....	\$2.00 per doz.	\$15.00 per 100	\$120.00 per 1000
Own-Root.....	1.00 "	6.00 "	50.00 "

RICHMOND, KAISERIN, BRIDES and 'MAIDS

Grafted.....	\$2.00 per doz.	\$15.00 per 100	\$120.00 per 1000
Own-Root.....	1.00 "	5.00 "	45.00 "

We offer over thirty varieties of Roses and refer you to our catalogue for the complete list. If your name is not on our list, kindly drop us a postal card and we will be glad to mail you a copy.

GERANIUMS

We Are HEADQUARTERS

and offer the **finest collection in AMERICA**, from 2-in. pots, at \$2.00 per 100, \$18.50 per 1,000—250 of a kind at 1,000 rates.

For \$18.50 we will send you 1,000, 50 each of 20 distinct kinds, in a collection on which we are willing to stake our reputation. A customer, in writing this week, says: "We used your Geraniums last year and had the finest collection we ever had. Sold out clean; had nothing left for stock."

We have a splendid stock, in 2-in. pots, of the following, at \$2.00 per 100:

DOUBLE LOBELIA, Kathleen Mallard; ALYSSUM, Giant and Dwarf; LEMON VERBENAS; FUCHSIAS, 6 Varieties; COLEUS, Verschaffeltii and Golden Bedder; LANTANAS, 8 varieties; IVY LEAVED GERANIUMS, 6 Varieties; SCENTED GERANIUMS.

DOUBLE PETUNIAS, mixed colors, \$3.00 per 100.

CANNA ROOTS, home grown, 1,000,000, good strong division, at \$18.50 per 1000. King Humbert, \$6.00 per 100, \$50.00 per 1,000.

Fertilized Flower Pots

For Growing
and Shipping
Plants

SHOWING
POT
PULLED UP

Made of Extra Heavy Manila Waterproof Card Board. Fertilized, Wire Stitched seams, Perfect Drainage and Shipped Flat. If you grow Tomatoes or Pot Plants you cannot afford to pass over this.

These square pots economize space, give more room to the roots than the tapering round pots. In setting out plants the pots are not removed. Simply unlock the bottom flaps and turn them up (see cut), allowing the roots to grow down.

Size	Gross Weight	Per 1000	250	1000
1 1/4 inch	about 30 lbs.		\$1.00	\$3.00
1 1/2 inch	about 40 lbs.		1.60	4.60
1 3/4 inch	about 50 lbs.		1.76	6.60

In setting out plants unlock the bottom, pull pot up one inch and you have a wall to protect the roots against Grubs and Worms.

Lily Of The Valley!

FOR PROMPT DELIVERY

"EXPOSITION" GRADE This is an extra fancy grade of Berlin crowns. There are never enough of them to supply the demand. Out of Mr. Riemschneider's entire growing, he usually has only 50,000 to 75,000 of this grade, which is evidence of the care with which they are selected. In cases of 2,000 crowns, at \$30.00 per case.

"PERFECTION" GRADE This is a true Berlin, extra selected, 3-year old, straight long, clean crown, with long, fibrous roots. Under proper treatment they force out with tall racemes bearing the maximum number of large bells, free from decay at the bottom. The foliage is ample but not too abundant. In cases of 1,000 pips, at \$13.00 per case.

"HOLSATIA" GRADE These are suitable for later forcing, or for cold storage purposes, and are highly recommended to seedsmen. Very fine selected 3-year old Hamburg Pips, very heavy roots, extra strong growth. Will hold over well in cold storage and produce good flowers the following Fall. In cases of 2,500 pips, at \$30.00 per case.

European Notes

The closing days of the wettest and gloomiest year we have ever known in an experience of more than half a century are deepening in intensity as the end draws near and all outdoor operations are once more at a standstill. Most of our friends are able to understand the conditions we have to face and their patience is the one glimpse of the silver lining.

Purchasers of Peas form the exception to the rule, perhaps from a fear that they will not receive what they have bought. This will probably be true of the very

out. Peppers, on the other hand, are quite the reverse but, strange to say, none of the yellow varieties have come up to expectations. The hot Peppers are yielding well. Chinese Giant Square is a disappointing crop as usual. This is one of our "hand to mouth" cultures, and some people will be left very hungry this season.

Our chief interest in flower seeds is centered in Sweet Peas; crops already delivered average about 200 pounds per acre.

By the time these notes are in your readers' hands a New Year will have dawned upon the world. The writer most heartily wishes every reader of these pages all the happiness and prosperity they can reasonably desire.

EUROPEAN SEEDS.

American Notes

Christmas Business

The seed trade as a whole would seem to have catered more than ever this season to the holiday trade, and the gist of the reports from all sections of the country plainly indicates that a most satisfactory volume of business has been accomplished, although the complaint is general that the high rates for practically everything in decorative greens have had a restraining tendency on the size of individual orders; could prices have been maintained at the average low levels of recent years, the output in this direction would have been at record breaking figures. The high prices for good Holly were very unfortunate, as in a retail way quite a large hunch is expected for 25 cents, and this is impossible when \$5 to \$6 a case must be paid. In several instances dealers report that they filled cardboard boxes with short sprays, which sold readily at 50 cents each. Christmas trees, generally, sold well, but customers were also much disappointed here, from the fact that the usual 50-cent tree was not of nearly as large size as in past seasons. Wreaths of all kinds, Immortelles, Christmas bells, Mistletoe, etc., all sold largely. Among plants it was very noticeable how popular the Poinsettia has become as a holiday plant; it sold very largely, both in pots and pans, as single plants and combinations. Begonia Gloire de Lorraine was more in demand than ever, and surely it makes a glorious showing when well grown. Other pot plants need no special mention, although, perhaps, the strong demand for ferns of all varieties should be mentioned. Some seedsmen added cut flowers to their direction; but, as a rule, plants and decorative greens made up the extra Christmas stocks with the seed trade.

Sweet Peas

Popular as Sweet Peas have always been, their sales the coming season bid fair to surpass by far anything ever accomplished in this direction. There is nothing in the whole list of flower seeds that will give your customers so much real satisfaction for so little money as a fine mixture of Sweet Pea seed. Since the introduction of the large-flowered or grandiflora type of Sweet Peas, and particularly since the splendid Spencer sorts have been added to the list, it has been possible to make mixtures of seed of unsurpassed quality. The real secret of success in Sweet Pea seed selling, is to persuade a customer to purchase a quantity of seed, sufficient to sow a considerable space very thickly. To this end every effort should be used to have customers plant not less than a quarter-pound of the better class of mixtures, and satisfaction is assured them. More space than ever will be devoted to Sweet Peas in the forthcoming catalogs by our largest seedsmen; this fact will add wonderfully to the already great popularity of this flower, and in arranging for the season's supply of seeds an ample quantity of Sweet Peas of the very best quality should be secured.

Purchasers of stock from advts. in these columns will confer a favor by making this statement in their order: Saw your advt. in the EXCHANGE.

We are headquarters for Sweet Peas of every description. Our Wholesale Catalogue of Quality Seeds and Bulbs (ready January 1st), contains 52 pages of Seeds and Bulbs you need. Write for it today—a postcard will fetch it.

ARTHUR T. BODDINGTON, Seedsman, 342 W. 14th Street, NEW YORK CITY

Please mention the Exchange when writing.

Please mention the Exchange when writing.

F. E.—The Best Advertising Medium

dwarf varieties, for the writer has just examined a large parcel just delivered which contains fully nine-tenths of waste, while the fully developed Peas are badly discolored.

Many of these can be used for stock purposes, and with a favorable time, may produce a good crop next year, but if we get an unfavorable Spring they are bound to be a total loss.

Just now we are busy cleaning Tomatoes and Peppers; so far as the former is concerned the crop of the late varieties is much better than we expected, the early sorts are not worth the washing

Meadowvale Florists' Light Mixture of GLADIOLI for FLORISTS

WHAT DO YOU THINK OF THIS

Unparalleled Offer?

You cannot duplicate the quality for several times the price.

There are varieties in this mixture you would not sell for \$15.00 per 100.

The vitality and power of multiplication is exceptional.

ARTHUR COWEE, *Gladiolus Specialist,*
Meadowvale Farm, Berlin, N. Y.

Dear Sir:—Herewith find \$.....for which you may enter my—our order for.....thousand of your Meadowvale Florists' Light Mixture to be shipped via freight express about.....F. O. B. Berlin, N. Y.

This order is given by me—us and taken by you with the understanding that if given proper soil and cultivation, we can, after blooming this season (1910) conscientiously say we have not received full value I—we can, at harvest time, return the stock, together with its increase in bulbs and cormels to you via freight—express and you will refund the above amount paid.
If returned freight—express charges will be paid by me—us.

Name.....
Town.....County.....
State.....

This order has been accepted and entered under the above conditions.
Berlin, N. Y.....1910

For forcing I can recommend it as being almost equal to the best named varieties generally used for that purpose.

It contains named novelties of merit, and hybrids bred especially to supply the needs of Florists requiring light colors.

Having for many years experimented extensively to the end of supplying a White and Light Mixture especially adapted to the Florists' Trade, for Funeral and Decorative work where light colors alone would be appropriate, I am now prepared to furnish my Meadowvale Florists' Light Mixture, which I can guarantee to contain the best quality obtainable in the world at the price. There is such a variation in Florists' Mixtures, as generally offered, that I do not wonder at the frequent disgust of the purchaser, and in my preparation of this stock I have endeavored to eliminate every variety with which the most critical florist could find fault, annually adding desirable varieties and roguing each year more closely.

This Mixture was first offered by me in 1906, since which time I have been unable to supply the demand. I have, however, this year a good stock and invite a trial from those not acquainted with, and increased orders from those who know its merits. For this season, 1910, it will be sold only by me and in lots of not less than 1000 or more. **Price, \$15.00 per 1000, F. O. B. Berlin, N. Y.,** cash with order, and will be sold subject to the conditions on above order blank.

This offer will hold good as long as the stock lasts and orders will be entered in their turn, although shipment may not be required until later. When the stock is all sold, this offer will be withdrawn, without further notice, therefore do not delay and miss it. May I not have the opportunity of demonstrating that I have a Mixture which, after growing one season, you would not part with for double the price paid? If so, fill out the order blank and send to me with remittance and I will sign and return duplicate to you.

*Illustrated Catalogue of Other Collections, Mixtures and Named Varieties will be
Mailed upon Application.*

The Bean Crop

It has been a great surprise to many that a number of varieties of garden Beans have turned out to be so short in yield, when early in the season such good reports were circulated regarding this most important crop. The writer has been investigating this matter, and feels that the following reasons for the shortage in the Bean crop seed yield, as explained by a most prominent grower, throw much light on the situation: "With us the Bean crop has proved very disappointing, owing to the fact that while the pods made a good growth, thus leading us, at inspection time, to expect a good crop of seed, yet at threshing time we found these good looking pods contained only two or three beans, whereas they ought to have contained four to six. It is easily seen what effect this will have upon the yield. This condition is attributed to the dry weather which came along just as the beans were forming. We believe the supply of seed beans for the season will show up somewhat shorter than has been anticipated in many quarters."

New York Seed Trade Notes

At last we have had the long-expected snowstorm; some ten inches on the level fell, and the traffic of the city is blocked until such time as the streets can be cleared. These conditions, combined with the usual after holiday feeling, have made for a very dull week with all the seed trade.

At Boddington's there is plenty doing. Tuberoses are being received and shipped; the bulbs are a very fine sample this season, sound, large and well-rhened. The half-standard Baby Rambler Roses, which in four varieties this house is offering for the first time in this country, grow only 1½ feet high, and will be a fine pot plant novelty the coming season. Forcing Gladiolus bulbs have been and are a very prominent feature just at present, the Gandavensis Hybrids being in strong demand; the sales of America alone have surpassed the most enthusiastic estimates.

Burnett Brothers did a very satisfactory Christmas trade; Japanese Fern balls went especially well, also Boston Ferns. G. G. Edmondson of this firm will make the Newport, R. I., trip this week; the firm supplies the private trade there very largely.

J. M. Thorburn & Co. are very busy getting things in shape for the seed selling season so soon to open. Their representative, Charles McTaggart, is in

New Jersey visiting the private trade.

The Stump & Walter Co. are much pleased with the amount of Christmas business done. Decorative greens of all kinds cleaned up well with them; Mistletoe was a leader in sales.

As usual, a few hundred crates of Holly arrived too late to be sold, and have this week been offered as low as \$1.25 per crate. Seldom it is that this does not happen to some shippers, someone is almost always caught.

Christmas trees at the end turned out to be in over supply with many retail dealers, especially so with the small grocers and kindred trades; quite large losses were sustained in this direction.

Wm. Elliott & Sons feel that the holiday business has been fully as good as the average of recent years. With them plants were especially in demand, Palms, Ferns and Ficus selling exceedingly well. They made a real run on small table Ferns at 60 cents a dozen. Decorative greens were well cleaned up, and the firm could have sold much more in the line of wreaths of all kinds, particularly of Holly. Red Immortelles were much in demand, but the various other colors of these sold at prices even less than usual. Altogether, a most satisfactory business was accomplished.

Vaughan's Seed Store have been having a hard time this week trying to unload, receive and ship to Europe several carloads of Tuberoses, the severe snowstorm rendering such work almost impossible. They made unusual efforts in their Christmas trade and were rewarded by accomplishing much more than in past seasons. Bouquet green sold out clean, the last price was 15 cents per pound. Their XXX Holly closed at \$5 per crate. Wreathing of all kinds was also cleaned up. It was a very satisfactory Christmas business with them.

Rickards Brothers had also a week of very large holiday sales, there being, especially, much demand for bulbs for house culture. Satisfaction is expressed among the seed trade over the re-election of William C. Rickards, Jr., as the treasurer of the N. Y. Florists' Club. Mr. Rickards is very much esteemed by all.

Wm. E. Marshall & Co. sold many decorative plants Christmas week, their fine location on 23d st. could not be bettered for this line of trade.

Peter Henderson & Co. are very busy packing early orders and putting up stock for the coming season. They report things as especially active for so very early in the season.

Dreer's Double Petunias

Our DOUBLE PETUNIAS, for more than half a century, have been the acknowledged standard. The strain this season is equal in high quality to its predecessors, and is well known to the trade.

We offer fifteen distinct varieties, in strong 3-in. pots, which will quickly furnish an abundance of cuttings.

Strong 3-inch pots, 75 cts. per doz., \$6.00 per 100. The set of 15 for \$1.00.

SEED OF OUR

Superb Strain of Fringed Petunias

DOUBLE, 75 cts. per 500 seeds, \$1.50 per 1000 Seeds.

SINGLE, 50 cts. per trade pkt., \$1.00 per 1-16 oz., \$1.50 per 1-8 oz.

OUR QUARTERLY WHOLESALE PRICE LIST, issued January 1st., offers a full line of reasonable Plants, Seeds and Bulbs.

One of our regular advertisers writes us as follows:

"On my part I can truthfully say that my advertisement in The Florists' Exchange has, from the beginning, been most satisfactory." Name and address on application.

There is an unusually large and early demand for Canna bulbs; there can be no question but that the coming season will witness the largest sales of these popular bedding plants yet made.

There is an unusually large number of good novelties and specialties in seeds to be offered in the forthcoming catalogs; this will add much zest to the seed selling. On every hand the signs point to a splendid season ahead.

Short Seed Supply

There is no past record of such a worldwide failure in the supply of garden seed as in the summing up of the results of the harvest of 1909—a failure in its ramifications covering not only the Eastern, Middle and Prairie States of this country, but the seed growing sections of England, France, Holland, Denmark and Germany.

The shortage in Peas, some Bush Beans, Table Beets, Mangels, Cabbage, Radish, Turnip, in fact a shortage covering nearly all the variations of nine or ten families, is so serious that in all these cases a famine in the seed supply positively prevails this moment, with a repetition in sight, as the prospect for next year, as concerns biennials, is exceedingly unfavorable both in America and Europe.

Of course, the above forecast applies particularly to those varieties of vegetables which were grown abroad the past very unfavorable Summer and Autumn, with the intent of producing seed during the Summer of 1910, as, Onion seed excepted, not over one-tenth of the seeds used of garden vegetables were saved in this country.

In addition to this, as concerns European biennials, can be made another forecast as to the next crop of American annual garden seeds, especially as to Peas and Beans to be sown for seed in the Spring of 1910, for of these the

outlook is not rosy; firstly, as seed stocks are diminished in quantity; secondly, because prices will be higher consequent upon the reduced quantity of planting stock; and, thirdly, for the reason that it is more difficult to persuade the more intelligent farmers to take contracts for growing precarious seed crops.

As a consequence of this present very alarming shortage in supply, and a well grounded apprehension of diminished acreages next Spring, both at home and abroad, in seed producing crops, there is certain to be a further advance in both American and European prices for crops of 1910 and, at present, in the face of prevailing conditions and next Summer's anticipated returns, prices for crops of 1909 will yet further advance, not only because of the scarcity of seeds, but because of the daily increasing cost of general business administration, for everything else costs more, from a ball of twine to a keg of nails, and the advance goes on.

D. LANDRETH SEED COMPANY.

Seed Personality

Burpee's New Annual is once more published to tell "the plain truth about the best seeds that grow." It would be an utter impossibility to properly describe in any reasonable space, the great value of this "book on gardening," containing as it does some hundred and eighty pages wholly devoted to illustrating and describing the very choicest and most valuable varieties of delicious vegetables and beautiful flowers. One thought, however, comes to us and stays with us as we turn over the pages—the thought of the Burpee personality, as applied to seeds, which is most apparent in every line.

Seed Personality means much; it means success in seed selling to the seedsmen who has the good fortune to possess it—and Burpee does to a most marked degree. Seed Personality may be defined as a living and controlling organism exercising supervision over all minute details, thus ensuring the highest germinating qualities, the truest types, and, through such factors, expressing The Burpee Quality in Seeds.

No person having a garden, no matter how small, should be without the Burpee catalog of seeds. It is full of human interest from cover to cover, and its reading will fill one with an added love and enthusiasm for the delights of a garden. The reader can believe every word and picture in it, as there is no exaggeration either in descriptions or illustrations. Burpee's New Annual is most certainly a fit representative of one of the largest Mail-Order Seed Businesses in the world.

Having to do with the development of the Burpee business in 1909 are two enlargements, both of considerable importance. The first was the purchase of an additional contiguous property on Fifth st., York ave. and Buttonwood st., Philadelphia, giving the Burpee Co. an entire city block all to itself for warehouse purposes; this event was noted in The Florists' Exchange of June 5, 1909.

The second event, announced in our issue of Oct. 2, 1909, was the purchase of a farm in California whereon the Burpee firm could absolutely control the raising of its own specialties grown in that climate, and the appointment of Edwin Lonsdale, our esteemed correspondent, as manager thereof.

DALLAS, TEX.—The Southland Seed Co. has been incorporated with a capital stock of \$20,000. Incorporators: William D. Garlington, Cullen H. Tinker and Herbert H. Holloway.

YANKTON, S. D.—The Gurney Seed & Nursery Co. has just installed a bag filling machine that is guaranteed to fill and paste 4,500 packets of seeds an hour, putting the same amount of seed in each packet, to the fraction of an ounce. The machine will dispense with the services of a large number of employees and do the work much more accurately.

ALBANY, N. Y.—Frederick W. Eberle has just purchased from his late partner, Frank A. Sherman, the interest of the latter in the seed firm of Sherman & Eberle. This business started with a limited capital, in 1898, in Albany, under the firm name of Woodward, Sherman & Eberle, and upon the withdrawal of Mr. Woodward in 1902 was continued by the other partners under the name of Sherman & Eberle. The business has grown largely under their management.

Forcing Gladiolus

Many florists plant these in boxes, or among their carnations, in the winter. They are excellent for decorative purposes and realize good prices, either wholesale or retail. Gladiolus are a good catch crop and take up but little room. The following are the best for this purpose.

Gladiolus Gandavensis Hybrids

America. The flowers, which are of immense size, are of the most beautiful flesh-pink color. \$3.25 per 100; \$30.00 per 1000.
Augusta. The florists' best white Gladiolus. First size bulbs, 1½ inches and up, \$2.00 per 100; \$18.00 per 1000.
 Bulbs, 1½ to 1¾ in., \$1.75 per 100; \$16.00 per 1000.
Shakespeare. White and rose. \$4.75 per 100; \$45.00 per 1000.
May. Pure white, flaked rosy crimson; the best forcer. Selected bulbs, \$1.75 per 100; \$15.00 per 1000.
Brenchleyensis (true). Flery scarlet. Selected bulbs, \$1.50 per 100; \$13.00 per 1000. First size bulbs, \$1.25 per 100; \$10.00 per 1000.

Remember, you may deduct 5 per cent. if cash accompanies order.

January 1, 1910

NURSERY DEPARTMENT

CONDUCTED BY
JOSEPH MEEHAN

AMERICAN ASSOCIATION OF NURSERYMEN
F. H. Stannard, Ottawa, Kan., President; N. P. Stark, Louisiana, Mo., Vice-president; John Hall, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., treasurer.

DES MOINES, IA.—The M. J. Wragg Nursery Co. has purchased 40 acres of land near this city, and will use for raising fruit.

RICHLAND, WASH.—The Richland Nursery Co. has been incorporated with a capital of \$25,000. Incorporators: C. F. Brethoupt, J. H. James and others.

Taxodium Distichum Pendulum The Bald Cypress of the South, *Taxodium distichum*, is one of the commonest trees of the low lands of the far southern States. It is found, too, in States almost on the border line of North and South, being stated as found in Delaware. And because of its odd growth—a thin cone, oftentimes—it is found planted on many a lawn in the North. Strange, too, to say that though coming from far South as they often do, they endure our northern Winters very well.

We have illustrated one of its beautiful varieties, the weeping one. It is not common in cultivation, though it could be, for planted in low, deep ground, as this one is, it is beautiful. It is pretty even in Winter when defoliated, though in Summer its foliage adds to its beauty by making more distinct its drooping character. This Cypress and all its varieties are swamp lovers, but in common with trees of similar character it appears to thrive just as well in low ground.

Nurserymen increase this weeping form by grafting it to the common stock, seedlings of which are easily raised from seeds sown in Spring.

Climbing Rose One of the hybrid *Wichuraiana* Roses, *Gardenia*, has been several years before the public at this date, but it is only of late that its worth is being appreciated; it deserves. Besides having the healthy foliage of the type, together with greater vigor, it is, practically, the only hardy climbing Rose having yellow flower buds—a yellow Rose one may say, though it is white when fully expanded. But it is when in the bud that all roses are the most valued, whether for cutting or for beauty of appearance, and when at this stage of expansion this Rose is yellow. While naturally of a strong growth, it helps the buds to make the plant still stronger, for then the buds increase in size and beauty. A good winter dressing of manure brings out vigorous shoots in Summer, and these are the ones from which flowers will come the season following.

A great deal of pruning of this class of Roses is not necessary. The lengthy shoots of the past season must be preserved, as from these an abundant crop of flowers may be expected. These shoots may have made lengths of ten to fifteen feet, from which a third of the ends of which may be cut away. This will make the remaining parts give larger buds than if there had been no pruning.

Fragrance of Osmanthus Flowers Where *Osmanthus Aquifolium* is hardy, as it is in the milder portions of the Middle States, it is a beautiful and interesting shrub. It is usually planted because of its Holly-like leaves and its evergreen character, but where its flowers have been seen they almost outclass its other merits, they are of such delicious fragrance, yellowish white in color, and appearing in the last days of Autumn. The sweet odor of the blossoms can be perceived at some distance from the bush. Those who are acquainted with the delicate and refreshing odor of the flowers of the *Elaeagnus imoni* will understand what those of the *Osmanthus* resemble in odor when we say they resemble this closely; and, strangely, both flower in late Autumn; often some flowers are open still when frosts appear. The Witch hazel used to be considered the latest blooming shrub, but these two are just as late.

This *Osmanthus* has a variety with smaller leaves than it, called *ilicifolius*; another one, *myrtifolius*, is pineless.

There are so few good broad-leaved evergreens hardy enough to withstand our zero Winters, that such kinds as this *Osmanthus* are doubly welcome.

In severe Winters this evergreen has been known to have its immature tops injured in open places near Philadelphia, but this does not occur after the plants are of large size and bushy.

Osmanthus (*Olea fragrans*) is a greenhouse shrub, well known for its fragrant flowers. Both it and the one of our notes, *Aquifolium*, are from Japan and China, but the latter species is the hardier of the two.

It is claimed for this *Osmanthus* that it can be increased quickly by grafting it on the common privet.

A Real Ever-blooming Rose A miniature Rose, both in growth and flower, is the Baby Rambler, so-called, a dwarf growing sort, but by no means a Rambler. It has flowers the color of the Crimson Rambler and, like this well known sort, they come in clusters, but there the likeness ends. It ends in the period of its blooming, too, for the Crimson Rambler flowers in June only, while the Baby Rambler flowers from June until freezing weather sets in being practically never without flowers the whole season. It would be hard to name another hardy Rose that does this.

The Teas are supposed to be always in flower, but, beautiful as they are, their blooming is not so continuous nor as abundant as the Rose to which we refer. Florists have found some difficulty in recommending to their customers a dwarf everblooming Rose for planting in cemetery lots. The Baby Rambler would fit it in dwarfness and constant blooming and would give a crimson flower, small but pretty, quite distinct from any other hardy kind available today.

Taxodium Distichum Pendulum.
Weeping Cypress

Citrus Trifoliata, the Hardy Orange The call for hedges of a defensive nature is not now so common as it was in the past, for the reason that barbed wire has taken their places where protection from intruders is required, and wire without being barbed is sometimes sufficient. Osage Orange, once a common hedge, is now rarely seen, unless in the newly settled parts of the country, where tree agents sometimes make sales of it.

Wherever a defensive hedge is required and the cold of Winter is not extreme, the hardy Orange, *Citrus trifoliata*, is unsurpassed for hedging. Its stiff growth, thorny nature and freedom from suckers, are all in its favor, and then there are its white Orange blossoms in Spring and its golden yellow Oranges in Autumn.

If thorn hedges were sought for as they used to be this hardy Orange would run out of demand the Osage Orange in many States for, besides the qualities already mentioned, it seeds freely and seeds grow well, so that the plants could be sold at a low figure.

It has proved quite hardy at Philadelphia so, from that city southward, it could be used without risk and, no doubt, farther North as well. It has become a great favorite with those who need stocks for hudding sweet Oranges, as it answers the purpose well.

We expect the year of 1910 to be the greatest in the annals of the Nursery Trade—Are you prepared to work for and win your share?

Clematis Montana The Clematis Montana, so much in evidence rambling over dwellings in England, makes little or no headway with us; for what reason, unless perhaps lack of hardiness in some situations, it is hard to say. So far as concerns Philadelphia it is hardy, and it thrives well. The flowers are white, and while not so large as some of the Jackmanii type the flowers are two inches or so in diameter, and are slightly fragrant. There are white ones in the Jackmanii class, but none of this section make as bushy a growth as the Montana, which is why it is a better one where shade is some object, as well as the beauty of the flowers.

A pleasing combination is formed by planting several varieties of Clematis near each other; the white, the purple, the crimson and the scarlet make a good selection. The scarlet is the herbaceous species, *coccinea*. Although herbaceous it makes shoots ten feet or more in length when it is a strong plant, quite tall enough to take its place as one of a group.

The C. Montana and many other species can be used to good purpose in planting them to run over bushy shrubs. Running at will in this way they are always more graceful looking than when trained.

Camphor Trees The Camphor tree has been favored with many names in its time, *Laurus camphora*, *Camphora officinalis* and lastly *Cinnamomum Camphora*. It is the tree from which the camphor of commerce comes, the camphor being obtained from the oil procured from the various parts of the tree by means of distillation.

In the northern States this beautiful evergreen is rarely seen, excepting in some of the older collections of plants, and in the conservatories of some of our large parks. It is not sufficiently hardy to withstand hard Winters, being a native of the warmer parts of Japan. It will endure 10° or more of frost, and even more if in the shade. It is very likely that if deprived of its leaves in late Autumn it would endure more cold than with them, as many evergreens will. The foliage calls for so much moisture in Winter that in dry seasons, between the cold and the lack of moisture, evergreens succumb to cold they could endure under better conditions.

The Camphor tree is not particular as to soil. In the southern States it flourishes well, no matter where planted, in poor or in rich ground, as it does also on the Pacific Coast.

In Florida the seeds ripen in October, and, if it is wished to raise seedlings, the seeds require sowing soon after gathering; for allowed to dry out germination is destroyed.

It is a tree often seen in gardens in the South; and in pots in the North it could be grown to give pleasure, the odor of the leaves when crushed reminding one somewhat of the wild spice bush, *Lindera* (*Laurus*) *Benzoin*, to which it is closely allied.

Red-Twigged Dogwood One of the pleasures of lawns and pleasure grounds in Winter is the several kinds of shrubs and trees that change the color of their young bark at that season. There are several do this, but the chief ones are Willows and Dogwoods. Just now, with Winter at its commencement, the Red-twigged Dogwood, *Cornus alba*, leads all in its bright red color, as it will continue to do all Winter. As soon as the first cold days of Winter come, this Dogwood commences to make its change. Up to this time there is a greenish red color, the green predominating, its Summer color, but with the cold approaching the change to red commences, the color gradually deepening until it becomes of the deepest red. This color it holds all Winter, the change to its Summer color commencing with the decline of cold weather in April.

An attraction such as this blood red shrub is in Winter is a great feature, and where grounds are extensive several should be planted together, to add to the effect the color gives. As it is the shoots of the past Summer that give the color, the display is helped along by giving the bush a close pruning in Spring or late Winter, to cause the formation of vigorous growth through the Summer.

There are many shrubs and trees the beauty of which is better displayed in Winter than in Summer. Some of the weeping trees, notably the Weeping Dogwood, are thought more interesting in Winter than in Summer; and how the white barked Birches are admired then! Evergreens, too, add greatly to the pleasure of grounds containing them. It is then of all times that they appear to us as staunch friends, presenting to us the same garb they did in Summer; and we, therefore, show how we appreciate them, by noticing them far more than than at any other time.

HARDY ROSES For Forcing

Ready for Immediate delivery

The right time to buy roses is when they are fresh and well ripened. Roses potted up in the fall or late winter become better established and force better, and are far more satisfactory in every way, and you can retard or force at your leisure. We recommend the American-grown "Ramblers." Don't attempt to force imported Ramblers; the general experience is that they are failures.

Something New in Roses for Florists

Half Standard Baby Ramblers

These are Baby Ramblers, grown on stems or standards about one and a half feet high, and will be a novelty for your trade you cannot profitably overlook. They are offered for the first time in this country in the following varieties:

BABY DOROTHY (Half standard). Deep pink. 60 cents each, \$6.00 per dozen, \$45.00 per 100.
BABY RAMBLER (Half standard). Crimson. 45 cents each, \$4.50 per dozen, \$35.00 per 100.

BABY CATHERINE SEIMETH (Half standard). White. 45 cents each, \$4.50 per dozen, \$35.00 per 100.
BABY "STARS and STRIPES" (Half standard). White and red grafted on the same plant; most attractive. 50 cents each, \$5.00 per dozen, \$40.00 per 100.

Hardy Perpetual Roses

We offer extra strong forcing two-year-old dormant, low-budded stock, in the following varieties, true to name.
 Price, 75c. for 5 (of one variety), \$12.00 per 100, \$110.00 per 1000.

Alfred Colomb. Carmine.
 Anne de Diesbach. Bright carmine.
 Ball of Snow. Pure white.
 Baron de Bonstetten. Dark crimson shaded.
 Baroness Rothschild. Satiny pink; extra.
 Captain Christy. Delicate flesh color.
 Duke of Edinburgh. Bright vermillion; very fine.
 Fisher Holmes. Dark rich scarlet.
 FRAU KARI DEUSCHKE. The finest white in existence.
 General Jacqueminot. Rich velvety crimson.
 General Washington. Beautiful red, shaded carmine.
 John Hopper. Beautiful rose-pink.
 La France. The finest light pink.
 Margaret Dickson. White, pale flesh center.
 Magna Charta. Clear rosy-pink.
 Mme. Gabriel Lulzet. Light satiny pink.
 Mme. Planter. White.
 Mrs. John Laing. Soft pink. Most desirable variety.
 Paul Neyron. Beautiful dark pink.
 Prince Camille de Rohan. Velvety crimson.
 Ulrich Brunner. Cherry-red.

Forcing Rambler Roses

American Grown. The Only Stock for Forcing
Crimson Rambler

Large heavy plants, two years old, mossed and packed in bundles of 10. 10 100
 3 to 4 feet \$1.25 \$12.00
 3 to 5 feet 1.75 15.00
 4 to 6 feet, extra strong and heavy 2.25 20.00

Arthur T. Boddington, Seedsman,

342 West 14th Street,
 NEW YORK.

Please mention the Exchange when writing.

CANNAS and GERANIUMS

WE have as good a list of CANNAS for florists' use as can be found. Strong 2 and 3-eye divisions, Northern grown Cannas, divided from the clumps, just before shipping; are far superior to stock shipped from the South. We firmly believe that Cannas divided early, packed in thin boxes and stored for weeks or months, have lost much of their vitality before the grower gets them.

Beatie Polievine, Crimson Bedder, Duke of Marlborough, Alphonse Bouvier, Egandele, Robert Christie, Florence Vaughan, Burbank, Pape Nardy, \$2.50 per 100, \$20.00 per 1000. King Humbert, \$5.00 per 100. (Many other varieties, but the above are a few leaders).

GERANIUMS Let us have your order for GERANIUMS for immediate shipment or to reserve until you want them. Standard varieties like S. A. Nutt, Mnd. Barney, John Doyle, Alphonse Ricard, Beatie Polievine, Med. Landry, Berthe de Pressilly, Marvel and La Favorite, \$25.00 per 1000 for strong 2 1/2 in. pot plants. Selections of 1000 in named varieties, our choice, all good sorts, \$20.00 per 1000. Tell us how many varieties you wish. Can do 50 if you want that many.

THE STORRS & HARRISON CO., PAINESVILLE, OHIO

GRAFTED ROSES

EDWARD J. TAYLOR, GREEN'S FARMS, CONN.

Please mention the Exchange when writing.

THAT subscription to F. E. you have been thinking of taking out for a brother florist! Why not send it in now?

Get in on ROSES

From early Summer propagation on own roots. Booking orders now for Winter and Spring delivery.

THE LEEDLE FLORAL COMPANY, SPRINGFIELD, OHIO.

Please mention the Exchange when writing.

Purchasers of stock from advts. in these columns will confer a favor by making this statement in their order "saw your advt. in the EXCHANGE."

Dorothy Perkins

Shell Pink. \$1.25 for 10, \$12.00 per 100. Extra strong, \$1.75 for 10, \$15.00 per 100.

Tausendschon

The new Rambler Rose. The name translated means a "thousand beauties." Color beautiful rose, shading to pink. \$2.25 for 10, \$20.00 per 100.
Tausendschon (standard grown). Each 50c., doz. \$5.00, 100 \$40.00.

HIAWATHA. The flowers are single and are of a deep, intense crimson shade with the petals shading to a pure white base. Flowers very freely and is undoubtedly one of the best of the single roses for forcing. Extra strong, two-year, field-grown, \$3.25 for 10, \$30.00 per 100.

WEDDING BELLS. A seedling of the Crimson Rambler. The most floriferous Rose yet produced. The color is white with the upper half of the petals soft-pink. Fine for forcing. Perfectly hardy. Extra strong two-year-old field-grown flowering plants, 3 to 4 feet. \$2.25 for 10, \$15.00 per 100.

LADY GAY. A seedling from the popular Crimson Rambler, which it resembles in habit and general effect. The flowers are of a delicate cherry-pink color, which fades to soft white. Strong plants, field-grown, \$2.25 for 10, \$15.00 per 100.

Baby Rambler Roses

BABY DOROTHY. The Pink Baby Rambler, and bound to find favor where the Baby Ramblers are popular. \$1.75 for 10, \$16.00 per 100.

Baby Rambler

(Mme. Norberl Levavasseur)

Strong field-grown plants, \$1.75 for 10, \$15.00 per 100.

St. Paul, Minn.

Business has been good ever since frost came in the Fall, and the holiday season found everybody working hard, early and late.

Dark days have been very plentiful and the growers have been watching patiently for brighter ones. There was a good supply of stock though shortages were apparent in the line of blooming plants.

The switchmen's strike has demoralized traffic somewhat, so that freight shipments are several days late and express shipments are three to six hours behind.

Christmas trees were plentiful while Holly and Lycopodium were in evidence at all the stores.

Our Dutch bulb friends are arriving and departing daily. Chas. Schwake, with C. F. Meyers, New York, was a caller. VERITAS.

Cincinnati

Business for Christmas was very good; stock was fine and everybody was satisfied. It was like an old-fashioned Christmas, with lots of snow, making it hard on the retail dealers who had quantities of stock to deliver.

Geo. E. Tromey's store on Vine st. was handsomely decorated with red roping and small red electric lights, Poinsettias and Gloire de Lorraine Begonias, which made a fine showing.

Heller Bros. of New Castle, Ind., sent in especially fine stock, consisting of American Beauty, Killarney, Richmond, Mrs. Jardine, Maryland and Bride Roses, upon which we received many congratulations. Carnations in red, white and pink, sold readily. We also had a fine lot of Sweet Peas, and a few Forget-me-nots made their appearance.

I wish all The Florists' Exchange readers a happy and prosperous New Year.

E. G.ILLETT.

Cleveland

The Christmas trade was all that could be expected. Everything sold well, but Violets were ordered beyond the amount expected to be sold. American Beauty Roses held fire somewhat, but they were rather high-priced at wholesale.

The weather conditions were ideal. On Christmas Day there was plenty of snow on the ground and everything sold rapidly. There was a great demand for perpetual goods and many wreaths were sold, both of Ruscus and prepared Moss. There was not the demand for red Immortelle wreaths this year. A lively demand for Carnations was experienced at \$6 to \$10 per 100, and Roses at \$8 to \$15 per 100, but the demand was greater for red Roses. Valley sold at \$4 and \$5 per 100. There was plenty of Paper White Narcissus at \$4 per 100, Roman Hyacinths at \$3 per 100, Stevia at \$1.50, and Sweet Peas, \$1.50 per 100. Holly was scarce and sold at from \$3.50 to \$4.50 per case. There was plenty of Southern Smilax and the string variety.

A few kicks were registered, but on the whole most everything was very satisfactory. Stock was good and every line of business went along without a hitch.

Knoble Bros. reported a splendid business. They had six wagons and two autos busy for two days.

Westman & Getz claim their business was very good, particularly in fancy baskets filled with foliage plants.

Chas. Bramley did his usual large business and is perfectly satisfied with results.

Mrs. Lincoln Brown had a fine business, considering her new location; customers seemed to naturally gravitate there.

Miss Fanny L. Evans, the popular secretary of the Cleveland Cut Flower Co. received 25 presents from admiring friends.

Peter Nichols had two stands in the Arcade; one particularly, having the prepared stock, was cleaned out.

Jones, Russell Co. are more than pleased with the exceptionally large business they have done, considering it is their first year in business.

Smith & Fetters report a large increase in their retail business.

Kirchners did a much larger business in plants this year than previously.

City Forester Boddy resigns his position with the City Park Department and will devote his time to writing a book on "bugology." O. G.

Prices Advertised in these Columns are for THE TRADE ONLY

VINCA VARIEGATA

Extra strong, thrifty stock, ready to shift, 3-in., \$35 per 1000.
GERANIUMS, Mm. Sallerot, strong thrifty, 2-in., ready to shift, \$20 per 1000.

Catalogs Received

SLUIS & GROOT, Enkhuizen, Holland.—General Price List under late of Dec. 15, 1909, of Vegetable, Flower and Agricultural Seeds.

OTTO PUTZ, Erfurt, Germany.—Annual Trade Seed List. The offers are exclusively of Flower Seeds with a selection of some Tree and Shrub Seeds.

WATKINS & SIMPSON, London, Eng.—Foreign and Colonial Wholesale Catalog of Garden and Flower Seeds, in which listings are included quite a selection of Novelties in both sections.

FOREST NURSERY AND SEED CO., McMinnville, Tenn.—Wholesale Trade List of Deciduous Trees, Seeds, Collected Seedlings, Shrubs, Collected Evergreens, Vines and Creepers, and Native Ferns.

I. N. SIMON & SON, Philadelphia.—Wholesale Price List of Seed Specialties for Market Gardeners, 1910. The front cover bears an illustration in color of Tomato Extra Early Mascot, pronounced by the firm as the best extra early and the greatest yielder they have ever seen. The catalog lists a full line of select seed for the purposes designed.

THE BARTELDSE SEED CO., Denver, Col.—1910 Catalog of Western Seeds. The size and contents are indicative of the growing importance of the seed trade in the West. Full lines of Vegetable and Flower Seeds are catalogued, and much space is given to Seeds and Requisites for the Farm. Tree Seeds, Deciduous, Fruit, and Rocky Mountain Evergreens are a feature. Front and back covers are lithographed in colors.

JOHNSON SEED CO., Philadelphia.—Johnson's Wholesale Price List of Tested Seeds, for 1910. This is a 48 page publication covering Vegetable and Flower Seeds, Farm and Garden Tools, and Greenhouse Requisites. Among the Vegetable novelties described are a new German Cabbage, and a new Earliana Tomato. The catalog appears in a handsome cover, the front page, bearing a half-tone design showing an old gardener admiring his product, and the back page illustrations of the interior of the company's store, and a section of the trial grounds.

IOWA SEED CO., Des Moines, Iowa.—This firm, whose motto—"Only One Quality, the Best," appears on their front cover, cover forward this year a quite a representative catalog, embracing within its pages every known vegetable and flower seed for the planter as well as the various tools and appliances necessary in the cultivation of the soil. The front cover shows, in colors, a collection of Roses, as well as advising the fact that they maintain 32 large greenhouses and carry 12 acres in flowers at their city establishment. Other color pages shown embrace the back cover, with collections of Tomatoes and Flowers; collections of Corn, Oats and Potatoes, and a plate showing a collection of Chrysanthemums and one of Geraniums.

J. F. NOLL & CO., INC., Newark, N. J.—A modern catalog of the latest type, amply and profusely illustrated with half-tone illustrations which serve to convey life-like images of the goods offered. The book is 8x10 ins., thus allowing the use of large type, good headings and impressive pictures, all clearly and well printed. The contents include full lists of all that is of value in Garden and Farm Seeds and covers, also, a full range of Flower Seeds, Spring Bulbs, etc. Insecticides, Fungicides, Fertilizers, Tools and Implements are also listed. Since the previous catalog was issued, Mr. E. C. Dungan, for over thirty years with Wm. Henry Maule of Philadelphia has become president of the Noll Company and Mr. Theo. Cobb, for over twenty years with D. M. Ferry & Co. of Detroit, secretary. Mrs. E. W. Noll, the treasurer, is the wife of the late J. F. Noll, the founder of the business.

AGELER & MUSSER SEED CO., Los Angeles, Cal.—Catalog of Vegetable and Flower Seeds, Tree Seeds, Deciduous Trees, Palms, and Dracaenas, Ferns, Flowering Bulbs, Chrysanthemums, Decorative Plants, Evergreen Trees and Shrubs, Vines, Roses, Fruit Trees, Small Fruits, Farm and Garden Tools and Supplies. Considerable space is given to a line of Eucalyptus seeds, and there is a chapter on the propagation and care of Eucalyptus. In the novelty section are to be found a new "Full Plume Aster" called Pluto, flowers deep blood red; Ruth Fisher, a new variety of Forget-me-not; a new Gloxinia, Regina; a new German Calceolaria; a purple-flowered Kudzu vine; new Nasturtiums, Phloxes, and Sweet Peas. The publication contains 144 pages, is well illustrated, and appears within handsome lithographed covers bearing representations of two vegetable specialties.

THE LIVINGSTON SEED CO., Columbus, O.—Livingston's Seed Annual for 1910, a 130 page catalog of Vegetable and Flower Seeds, Bulbs, Roots, Ferns, Flowering Plants, Roses, Hardy Herbaceous Plants, Peonies, Aquatic Plants, Climbers, Hardy Ornamental Trees and Shrubs, Hedge Plants, Ornamental Flowering and Shade Trees, Fruit Trees, Small Fruits, Grass Seeds and Garden and Farm Tools and Requisites. Among the vegetables are several

IMPORTANT ANNOUNCEMENT TO CARNATION GROWERS

At the earnest solicitation of a large number of commercial and private growers, the Cottage Gardens Company has decided to disseminate, this year, the two famous Carnations —

Mrs. C. W. Ward and Alma Ward Two varieties which are well known to all the leading growers of the country. Four years' test in the New York market has demonstrated their popularity and good staying qualities. For the past three years we have been growing from fifteen to twenty-five thousand Plants of each, during which time they have always commanded the highest market prices, and at no time has the supply been equal to the demand.

On the exhibition table they have taken the highest honors, and we believe it is safe to say these two Carnations stand without an equal.

Carnation, Alma Ward

Mrs. C. W. Ward

MRS. C. W. WARD is a perfectly formed flower with full center; color deep pink, several shades lighter than Lawson, deeper than Winsor; having strong, erect stems, 24" to 36" in length. A vigorous, healthy grower, and has never shown disease of any kind.

A very early and free bloomer, producing fine flowers as early as September 1, which bring from twenty-five to fifty per cent. more than any other variety on the market.

The keeping qualities of this variety are remarkable. Several shipments of blooms sent to Europe reached their destination in perfect condition, and wherever exhibited it has always been the last to show signs of wilting.

AWARDS

Silver Medal of the Society of American Florists, Boston, 1906; the Craig Cup for Best Seedling, Philadelphia, 1906; the Lawson Bronze Medal, Washington, 1908; the Horticultural Society of N. Y. Silver Medal, Sweepstake Prize for Best 100 Blooms, New York, 1909; the Horticultural Society of N. Y. Diploma for Best New Variety, New York, 1909.

Rooted Cuttings, ready Jan. 15, 1910. Dec. and first part of Jan. cuttings all sold. \$2.00 per 12; \$12.00 per 100; \$100.00 per 1000; \$95.00 per 1000 in lots of 2500. 25 at the 100 rate. 250 at the 1000 rate.

Alma Ward

This beautiful Carnation is pure white, except during dark weather, when it shows delicate splashes of pink similar to the Cattleya, increasing its popularity.

ALMA WARD is the largest, most fragrant Carnation ever grown, producing perfect flowers $3\frac{1}{2}$ " to $4\frac{1}{2}$ " in diameter, on strong, erect stems, 36" to 42" in length.

This most remarkable variety takes the same place among Carnations as the American Beauty Rose does among Roses, and has, during the past four years, been awarded numerous prizes, including the following:

The Lawson Silver Medal, Toronto, 1907 (no gold medal having been awarded); the Lawson Gold Medal, Washington, 1908; Silver Medal of the Society of American Florists, Washington, 1908.

Rooted Cuttings, ready Feb. 1, 1910. Jan. cuttings all sold. \$3.00 per 12; \$5.00 per 25; \$9.00 per 50; \$15.00 per 100; \$35.00 per 250; \$65.00 per 500; \$120.00 per 1000.

INVITATION We extend a cordial invitation to all those interested to visit our establishment, where they will have an opportunity to see these varieties growing and to compare their good points with other standard varieties grown under the same conditions.

The Week's Work

BY
FRITZ BAHR

Carnations

Selecting Cuttings for the Propagating Bench

There is a quantity of good material now on the plants fit for cuttings. Every flowering stem has a number of shoots along the base, and any of them which are 3 inches in length will do. Whenever there is plenty of stock don't use cuttings in a variety of lengths; pick them out so as to get them as near one size as possible. If uneven when inserted into the propagating bench you can be almost sure they will remain so until they go to the field. When taking cuttings, use the greatest care in selecting them; you want a vigorous one to start with, one healthy and full of life; a sickly one will never develop into a healthy plant afterward. Cuttings from plants which are not in a thriving condition should never be used for propagating. If short on a certain variety, and you are anxious to grow extensively from this particular one for another season, buy clean, healthy rooted cuttings, rather than use cuttings from sickly stock or make use of every little side growth for propagating in order to get a certain number into the sand. There isn't any operation in our business more simple than that of propagating Carnations; if the right material is at hand a knife is of but little use, especially at this time of the year; but what is necessary is good healthy stock, clean sand and bench, and a healthy atmosphere in the house the cuttings are expected to root in.

Shasta Daisies

Plants Grown from Seed Sown Now

This is a good time to sow out some Shasta Daisy seed, by so doing splendid salable plants in 4-inch pots can be had by next May, and they will bloom this year. Such as are not sold for your customers' old fashioned flower borders or perennial beds may be planted out on your own grounds. With us, the Shasta

Daisies don't do as well the third year, and after, as in the first and second. Even when divided we don't get the results as we do with the plants grown from seed, and while the proper time to sow the seed is during May and June, outdoors, in order to get large enough field grown plants by the following Spring, nice stock can be had if sown out now indoors. The Shasta Daisies are among the finest perennials for cut-flower purposes. Anyone conducting a retail place knows of what value they are during the Summer months, and more of them should be made use of. There isn't a retail grower in the country who can't sell numbers of them in pots for planting out in Spring. Sow out thinly. It doesn't hurt to put two or three of the seedlings together in 2-inch pots. Keep the plants in a temperature of not more than 43° at night; a Carnation house is almost too warm a place for them. During January and February there is danger of the plants damping off if kept too warm. Avoid, also, using a too heavily manured soil; this, or sour soil will also cause damping off. I might mention that among the numerous sorts of Shasta Daisies now offered the variety Alaska will be found a good one for the florist.

Cannas

Examine the Stock Under the Benches

I noticed the other day that some of the Cannas under the benches are making quite a growth. This, if allowed to continue, will weaken the plants. We find that on account of the unusually warm weather we have had this Fall all the plants which had been brought in, with balls of soil, after the first frost had spoiled their foliage, have made considerably more growth than those which had but little soil clinging to their roots and were brought in later, which of course is natural. However, all such as are growing should be gone over. Some of the clumps, even when standing on boards, might be sending roots down into the soil between the boards, through the cracks. This, in a Carnation house temperature, is bound to start a growth. Lift them and reset. Plants exposed to heavy drip from above should be removed to a drier spot. Cut off all long shoots; if there are any of from 3 to 6 inches in length they are not likely to do any harm for awhile, and in another month from now they may be removed carefully and potted up, or put in flats, especially if they consist of some of the newer varieties—

it pays to save them. It might also be well to examine the plants which are not making a growth; there is as much danger of the eyes shrivelling up for the want of moisture as there is from rotting due to too much.

Primula Obconica

Prepare a Stock of Plants for Easter

There is plenty of time yet to order, if you should be short, some nice strong $2\frac{1}{2}$ " inch stock of P. obconica. If such can be had and the plants are potted up into 4's in good soil, you will get splendid stock for Easter, and that is really the time of the year when they are at their best, and sell. Made up pans containing five to seven 4-in. pot plants in full bloom make a great showing during March and April; in fact, I hardly know another plant which blooms as freely during the Winter months as P. obconica does. Give the plants a little more heat than you would the Chinese Primulas, well manured soil and plenty of water. January isn't any too early to sow out some seed for next Winter's supply. This, of course, will produce plants for 5 and 6-inch pots by next December, but they come in handy then, especially for the retail grower; quite often, we are in want of flowers for design work, and what is of more or greater value than these Primulas. If you have a few plants on a side bench you will always have flowers to cut, and as long as we have set funeral designs to make up the obconicas will be of as great value as a Rose or Carnation for our work.

Poinsettias

Care of Stock Plants After Xmas

Poinsettias have been one of the best sellers we had for Xmas; in fact, with us, the demand for them has been unusually heavy. It seems that in spite of all the artificial flowers one sees displayed the real article is being more and more appreciated by the flower lovers. There certainly seems to be a steady increase in the demand for them every Xmas, for the pot plants as well as for the cut ones. The plants which have been grown in pots make good material for stock; all that is necessary to do to them now is to give them a rest until next May. Plants which have been cut down should be laid on their sides under some bench where there is no danger of drip from the top. Don't pick out a Violet house, but, if possible, use the house the plants were grown in, they require warm quarters. If you have

stock plants which were grown in benches, lift them with a good clump of soil, they will answer as well as the pot plants to propagate from next May. Another thing I might call attention to is to take a sufficient number when selecting the stock plants; while a great many cuttings may be had from a few plants, nothing is gained by figuring too closely.

Hen Manure on Carnations

"We would like to water our Carnations, which we are growing on the bench system with a liquid manure made from hen droppings. Will some one who has had experience in its use give in detail the proportion of manure and water and the frequency of use and the results?" VIRGINIA.

—Liquid fertilizer made from hen manure may be successfully used on Carnations, but care should be exercised not to make the solution too strong. Poultry manures contain a fair percentage of nitrogen, phosphoric acid and potash, which elements are especially valuable in the growing of all flowering plants. These fertilizing elements are readily available in poultry manures. One peck of manure to about 50 gallons of water is about the right proportion. It should be allowed to stand for about one week at which time the manure will have fermented thoroughly and be ready for use.

At this season of the year it would be advisable to use this liquid feed alternately with clear water. Later on, when the sun is higher, and consequently the root action more vigorous, it may be used more often.

The fertilizing properties of hen manure are such as are necessary for the successful growing of flowering crops and, if this manure is used carefully, the result should be a healthy and vigorous growth. It is not well to depend altogether on this liquid feed, however. When the real growing season arrives, say from Feb. 15 on, it would be advisable to use a good mulch of cow manure, well rotted, and mixed with about one-third soil. This will keep the beds from drying out too quickly and will give the surface roots new material to work in.

DIANTHUS.

Carnation "Admiration"

THIS Carnation we offer to the trade as being one of the finest Carnations of any color that we know of up to date. Being a beautiful shade of pink, somewhat lighter than Winona, having that beautiful satin finish, always showing up well either in natural or artificial light. Plants benched in August are now coming into full crop, carrying from 10 to 20 buds. We have been cutting since September 10. As a money maker you will find no equal. The size of the flower is 3 to 3½ inches, excellent form, well built up in the center, with the petals so arranged as to make it stand the general requirements of a good fancy commercial variety. A grand keeper and shipper. The habit is ideal, upright, with no surplus grass and every shoot going into flower. Its freedom and earliness make it nearly the ideal Carnation. The calyx is very tough and seldom bursts. Can be handled with great success either from the field or grown inside all Summer. No one has to be an expert to handle this variety. It scored 86 points at the American Carnation Society meeting at Indianapolis, January 27 to 28, 1909.

Price, \$12.00 per 100; \$100.00 per 1000. 250 at 1000 rate.

Send for catalogue of all other new and standard varieties of Carnations. We are always pleased to have visitors come and inspect our stock and varieties.

Rose, White Killarney (Waban variety), 2¼-inch pots, own roots, \$8.00 per 100, \$75.00 per 1000.

CHAS. KNOPF FLORAL CO., RICHMOND, IND.

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in General.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published every Saturday by the A. T. DeLaMare Ptg. and Pub. Co. Ltd., Proprietors, 2, 4, 6 and 8 Duane Street, New York. A. T. DeLaMare, president and managing editor; Jas. H. Griffith, secretary; David Touzeau, treasurer. The address of the offices is the address of this paper. Short address: P. O. Box 1897, New York. Telephone 3765-6 Beckman

Chicago: Margaret T. Flint, room 614, No. 50 Wabash Avenue; tel. Randolph 3000. Office hours: 9.30 to 12.
Boston: J. W. Duncan, Jamaica Plain, Mass.
Philadelphia: A. H. Secker, 306 Wood Building, No. 24 So. 16th St.

Yearly Subscriptions—United States and Mexico, \$1.00. Canada, \$2.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Draft on New York. Post Office or Express Money Order; if paid in cash please register letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

Registered Cable Address: Florex, New York.

Telegrams—Telegrams received in this office up to 3 p.m. Wednesday, containing changes in advertising, will receive attention for the issue of the Saturday following; likewise, telegrams having informative matter intended for our news columns will be received up to Thursday 9 a.m. News telegrams should be forwarded after 5 p.m. Wednesday and marked "Night Press Message, Collect." These will be forwarded by the telegraph companies at their newspaper rate, providing the material so forwarded contains news for the paper.

A Happy and Prosperous New Year

This is our greeting to friends, subscribers and advertisers. Not a cold, formal expression, but backed by our heartiest well wishes. We would like to shake hands with every man who reads the paper (his wife, sweetheart or sister, too) but since that privilege is impossible we ask that each and all who read this greeting will treat it as genuine to the core.

Index to the Florists' Exchange, Vol. XXVIII

This index, covering the period from first issue in July to last in December, 1909, will be shortly ready for distribution. Subscribers desiring a copy of this index can obtain same by notifying us by post card; copies will be mailed to those who have already previously advised us to that effect.

The Florists' Exchange Design Book

A new edition of the Design Book is now in preparation and it is expected, will be issued about January 20. It will be found a decided improvement on the earlier editions, has been completely remodelled and now contains 80 pages, covering a multiplicity of designs. It will be freely admitted the most valuable compendium of its character ever offered to the trade, as well as the cheapest. It is sold only in connection with a subscription for this paper; The Florists' Exchange two years and one copy of the Design Book, new or renewal subscription, for \$2.50.

To Our Readers

We beg to remind our friends and subscribers that our constant endeavor is to record in The Florists' Exchange all matters of trade interest, and we shall be much obliged if they will co-operate with us in this aim by giving us early intimation of all changes in firms, deaths, legal cases affecting the trade, local matters likely to prove interesting to others, also information as to crops and novelties in flowers, seed and nursery subjects.

Photographs that are clean-cut, sharp and illustrate subjects of general trade interest (and these are innumerable) are always heartily welcomed.

If newspapers are sent, will our correspondents kindly mark the paragraphs to which they wish to draw our attention; and if cuttings from same, indicate the periodical from which derived.

We always welcome reliable cultural notes, if new or concerning novelties likely to prove valuable from a commercial point of view, and shall be pleased to pay for same, if desired; it will, however, be readily understood that ordinary cultural details respecting commonplace subjects are out of place in a newspaper for experts.

Our own knowledge and experience are always at the service of our subscribers, either through our columns or privately, and we will make every endeavor to answer all leading and important questions through a reliable authority.

We do not allow our advertising columns to dominate or influence our editorial remarks.

Review of Nineteen Hundred and Nine

To the satisfaction of every one in the trade, the year 1909 was ushered in with little, if anything, on the trade horizon of a disturbing character, and throughout the year nothing occurred to in any way block trade progress, unless we except the long continued drought of Summer. While trade happenings of particular interest were notably absent, still there is plenty of evidence to show that all branches of the business worked in general accord for the advancement of floriculture in all its branches. Probably the principal subject of concern was the settlement of the tariff, but, thanks to the zeal with which the leading trade organizations took up the different phases in the Payne bill applying to horticultural interests, the final passage of that measure ensured a tariff which is proving entirely satisfactory to seedsmen, nurserymen and florists.

Hard Times Passed

The results of the panic which existed toward the close of 1907, and which to a considerable extent affected trade in 1908, were no longer retarding business at the opening of 1909 and reports indicate that the year was a fairly prosperous one. The various exhibitions held during the Summer and Fall showed, most of them, improvements over those of previous years, and the number of "first annuals" was most gratifying, betokening a desire to increase the influence exercised by these shows. The public, through the attendance noted at the exhibitions, evidently is beginning to respond to the educative influence which they exert.

S. A. F. and O. H. Annual Meeting

The silver jubilee convention of the S. A. F. & O. H. was held at Cincinnati in June. It was the 25th annual meeting, the first having also been held in Cincinnati; consequently the proceedings were largely of a reminiscent character. Recommendations in the president's address relative to the creation of special sections of the Association; that the election of directors be made by the convention and the appointments of secretary and treasurer by the directors; that application be made to the Secretary of Agriculture for data and information from foreign countries in reference to the culture of Palms, Azaleas and Bulbs in those countries with a view to developing kindred industries in the United States; and that an effort be made to secure appropriations for florists' departments in agricultural experiment stations, were all concurred in. On the first named recommendation action was taken in November, in Chicago, when a well attended meeting of retailers from different sections of the country was held with the object of forming a retailers' section of the Society; the possibilities and usefulness of such a section were fully discussed, and a committee was appointed to consider the matter and report at a meeting of the executive board to be held next March in Rochester. The convention also passed a resolution endorsing the provisions of House Bill Number 10,762 providing for the establishment of a parcel post in the United States. The holding of a second national flower show was discussed fully upon a report presented by the committee in charge of the project, and it was arranged to hold such a show in Boston during the Spring of 1911. F. R. Pierson of Tarrytown, N. Y., was elected president for the year 1910. The trade exhibition held in connection with the meeting was extensive in its scope and remarkably successful from every point of view. The next place of meeting will be Rochester, N. Y.

Canadian Horticultural Association

This Association held its annual meeting in Toronto in November in connection with the show of the Ontario Horticultural Society. Some valuable papers were presented and discussed, principal among which was one bearing on the transportation of cut flowers in the Dominion and the lack of proper facilities furnished by the transportation companies. Representatives of the Canadian express companies were present, and action toward remedying the deficiencies seemed a likely result. H. E. Philpott of Winnipeg was elected president for the forthcoming year, and W. C. Hall of Montreal secretary, and under the guidance of these gentlemen there would seem to be much good to result from the organization.

American Association of Nurserymen

The annual meeting of this Association was held at Rochester, June 9-11. The tariff committee reported much work done at Washington with the result that a list of rates had been practically agreed upon. The legislative committee recommended that efforts be made to obtain the enactment of a Federal law providing for the inspection of imported nursery stock, and the committee was empowered to take action to that end. Several valuable papers were read and discussed, and the matters of business taken up showed much enthusiasm along the line of protection of the interests of the nursery trade. An excellent trade exhibition was a feature of the meeting. F. H. Stannard of Ottawa, Kans., was

elected president for the forthcoming year, and St. Louis is to be the next place of meeting.

American Rose Society

This Society held a most successful convention at Buffalo in March, and, in connection with it, an exhibition which, for quality of exhibits, was considered to be the best ever held by the organization. It was notable for the first public appearance of the new Roses White Killarney and My Maryland, which are already very prominent in our cut flower markets. The Society's silver medal was awarded to the Waban Rose Conservatories, Natick, Mass., for White Killarney, the variety scoring 87 points. The different sessions of the convention were well attended and the affairs of the Society were shown to be in excellent condition. August Poehlmann of Chicago was re-elected president for the year to follow, and Benjamin Hammond of Fishkill, N. Y., was re-elected secretary. The Buffalo Florists' Club was conspicuous at the convention, and the efforts of its members in the promotion of the success of the meeting, and in the entertainment of the visitors, were most laudable.

American Carnation Society

This Society held its annual meeting and exhibition at Indianapolis in January. The exhibition was a remarkable one from many points of view and was strongly representative of the advance made in the culture of the Carnation. While the exhibition hall would ordinarily be considered a large one, it was really inadequate for the accommodation of the many exhibits staged. The number of promising seedlings exhibited was very large, and several of them found places in the ranks of the varieties presented for dissemination before the close of the year. The Society's gold medal was won by Albert Roper, Tewksbury, Mass., with Bay State, a beautiful variegated variety. The silver medal was awarded to Dailedouze Bros., Brooklyn, N. Y., for a white seedling of remarkable size, known as No. 404. The bronze medal was won by the scarlet variety, O. P. Bassett, originated by Bassett & Washburn of Chicago. Certificates of merit were awarded for the varieties Shasta (Baur & Smith); J. Whitcomb Riley (Bertermann Bros. Co.); Sangamo (A. C. Brown); No. 108, Cerise Pink (N. Zweifel); Sport of Winsor (F. R. Pierson Co.); No. 60, Crimson (F. R. Pierson Co.); Superba (A. C. Brown); No. 30, White (F. R. Pierson Co.).

New varieties of Carnations registered during the year were: Mrs. Pfeuffer (John S. Pfeuffer); Washington (Henry Eichholz); Alvina (Henry Eichholz); Arapahoe Glacier (S. Knudson); Gov. Deneen (A. C. Brown); James Whitcomb Riley (Bertermann Bros. Co.); Olean (Danna R. Herron); Badger State (N. Zweifel); Bright Spot (N. Zweifel); Kathleen B. W. (F. Schramm); Shasta (Baur & Smith); Sangamo (A. C. Brown); Superba (A. C. Brown); Vincent's Pink (Grimm & Gorley); Scarlet Glow (F. Dörner & Sons Co.); Admiration (Chas. Knopf Floral Co.); Miami Queen (Miami Floral Co.); Black Chief (Stuart Low & Co.); Conquest (Chicago Carnation Co.).

Albert M. Herr of Lancaster was elected president, and the next meeting of the Society is to be held in Pittsburg, Pa., Jan. 26, 1910.

Chrysanthemum Society of America

This Society held its annual meeting in New York on Nov. 10. Elmer D. Smith of Adrian, Mich., was re-elected president. The reports of the officers showed considerable progress in the work of the organization and an increase in the popularity of the flower it represents. A grand exhibition was held in connection with the meeting, the quality of the flowers being considered higher than at any previous meeting. It was to be regretted that the exhibition quarters at the American Institute were inadequate for the proper staging of the entries, but assurance was given that any future exhibitions held in New York would be accommodated to better advantage. Many new sorts were certificated by the Society, among the named varieties being: Anoka (Elmer D. Smith & Co.); Oropa (Elmer D. Smith & Co.); Donatello (Elmer D. Smith & Co.); Mrs. W. Arnold (C. H. Totty); Mrs. A. R. Peacock (C. H. Totty); Mrs. W. Wincott (C. H. Totty); Constellation (James Livingstone).

American Peony Society

This Society held its annual meeting at Cottage Gardens, Queens, L. I., in June. Through the unavoidable absence of President C. W. Ward, the meeting was presided over by Prof. John Craig of Ithaca, N. Y. Reports showed an immense amount of work consummated in the direction of nomenclature. In the trial grounds at Ithaca some 2769 varieties of Peonies had been planted in an effort to make a determinate report. As a further assistance in this direction, the meeting appointed a committee to visit the trial grounds during the blooming season and assist in the nomenclature work. The secretary's report showed a satisfactory state of the affairs of the organization and an increase in the membership. B. H. Farr of Reading, Pa., was elected president, and C. W. Ward was made honorary president as a recognition of services rendered the Society. The next meeting will be held in Boston.

January 1, 1910

National Sweet Pea Society of America

A new society, formed in the interests of a flower which has made enormous strides in popularity in recent years, was the National Sweet Pea Society of America, promoted by Harry A. Bunyard of New York and organized at a meeting, held in July, at the American Museum of Natural History in New York. An exhibition of some magnitude was a feature of the meeting. Harry Turner of Port Washington, L. I., N. Y., was elected president, and Mr. Bunyard secretary. Preliminary work looking to the proper establishment of the organization was satisfactorily accomplished, and plans were laid looking to the procurement of trial grounds for the purpose of settling nomenclature. A committee for the latter purpose was appointed, and later in the season effected arrangements whereby trial grounds were to be provided at Ithaca under the oversight of the experiment station at the College of Agriculture of Cornell University, which station will cooperate with the Society in making tests. The infant Society started under very favorable conditions and will doubtless prove of great service to the trade.

New England Dahlia Society

The New England Dahlia Society met in Boston in October. Reports of the different officers showed advancement made in the objects of the organization and an increased interest in the Dahlia. It was shown that the membership of the Society exceeded the four hundred mark, and its affairs were in a prosperous and satisfactory condition. An excellent exhibition was held in connection with the meeting.

American Seed Trade Association

The annual convention of this Association was held at Niagara Falls in June. State legislation governing the sale of pure seeds was an all important topic for discussion, and President Woodruff's address reviewed the situation in detail. His recommendation that a committee of five, to act with counsel, to be retained annually, be appointed to acquire prompt knowledge of bills affecting seed interests introduced in Congress or State legislatures, and to oppose unfair or advocate wise legislation, was adopted. A recommendation of the committee on seed legislation that a committee of three be appointed to confer with a similar committee from the National Association of State Seed Analysts to agree, if possible, on the draft of a uniform State seed law to take the place of the many objectionable laws in existence, was concurred in; as also was a recommendation by President Woodruff that in future statutory enactments separate provisions be inserted governing the sale of vegetable and flower seeds from those covering the sale of grass, clover and field seeds. A committee was appointed to urge upon the Secretary of Agriculture of the United States and the Agricultural Committee of the Senate and House, that such congressional legislation be effected as would establish a national irrigation station near Washington, D. C., where pumps, irrigating machinery and all appliances could be assembled in order to show working processes as adapted to Eastern conditions. Throughout the convention considerable enthusiasm was manifested in the proceedings. J. C. Robinson of Waterloo, Neb., was elected president for the ensuing year.

American Association of Railroad Gardeners

This Association held a very enthusiastic meeting in August, at Philadelphia. About 45 delegates were in attendance and some excellent papers on various subjects connected with railroad gardening were presented and discussed. The Association is doing much good in its line of work, and the extension of floriculture on railroad systems is being ably advocated. Geo. B. Moulder, chief gardener for the Illinois Central Railroad, was elected president, and J. S. Butterfield of the Missouri-Pacific system, secretary-treasurer.

The Florists' Hail Association

The good offices of the Florists' Hail Association were greatly appreciated during the year, the losses from hailstorms being remarkably heavy. From Nov. 23, 1908, to July 4, 1909, the Association paid out in losses \$26,657. The financial condition of the organization, as reported at the annual meeting, held Aug. 19, in Cincinnati, was excellent, with a membership of 1605. John G. Esler continues to be secretary.

New Organizations

Besides the Sweet Pea organization already mentioned as organized in New York, there was formed, at the convention of the American Seed Trade Association, a new association to be known as the Wholesale Grass Seed Dealers' Association, with Albert McCullough president.

Another new association formed last Spring was the Employers' Association of Landscape Foresters and Commercial Entomologists.

New Plants

Many new plants made an appearance during the year. The following were registered by the S. A. F. & O. H.:

Adiantum Roedderii (Alfred Roedder); *Begonia Pres.*

Taft (J. A. Peterson); *Berberis Thunbergii*, var. *Silver Beauty* (M. J. Van Leeuwen); *Cannas*, *Halley's Comet*, Mrs. Alfred F. Couard and Mrs. Carl Kelsey (Conard & Jones Co.); *Canna Multiflora* (Vaughan's Seed Store); *Cannas*, *Wawa*, *Mont. Blanc Improved* (Conard & Jones Co.); *Cattleyas* *Oakland* and *Eureka*, *Laelia*, *Cattleya Magenta* (Chas. G. Roebing); *Carnation Edward* (W. H. Shumway); *Chrysanthemum Dr. Frederick A. Cook* (Cockburn & Sons); *Clematis paniculata rubra* (Jackson & Perkins Co.); *Geranium Red Wing* (F. H. De Witt & Co.); *Hydrangea cinerea sterilis* (E. Y. Teas); *Nephrolepis Galvestoni* and *N. Pruessneri* (J. D. Preussner); *Rose Chas. Dingee* (Dingee & Conard Co.); registration protested and referred to committee of A. R. S.; *Rose Climbing Mosella* (Conard & Jones Co.); *Rose Climbing Killarney* (Alex. Montgomery); *Roses Priscilla* and *Abundance* (Peter Henderson & Co.).

The Death Roll

The grim reaper was responsible for the removal of many prominent men in the trade, including some well known pioneers. As our space will not permit the presentation of a complete list, we mention the following as among the more prominent: Charles L. Allen, Peter Barr, Peter Bauscher, Francis Calvert, Edward Dale, Herman Dreyer, John Wilson Dunlop, W. H. Gullett, Wm. Hagemann, E. V. Hallock, Herbert Heller, Wm. K. Harris, Bernhard Hasselbring, John R. Henthall, Dr. F. M. Hexamer, Carl Jurgens, W. C. Krick, H. F. A. Lange, J. H. Menard, Carl Mulder, L. M. Noe, Aldrich J. Penneck, Carew C. Sanders, John Scott, J. H. Small, E. Sutermeister, John Thorpe, Thomas C. Thurlow, Thomas M. Waters.

New Hardy Rose Johannisfeuer (St. John's Fire)

This cross of Princess de Béarn and *Jaune d'ore* has been very happily named St. John's Fire, for it has an unusual and peculiar brilliancy of color which is remarkable even among types of the Jack Rose; moreover, the bright fiery red petals are tinged with a golden shimmer such as is not found in any other variety of Rose. The flower is of a handsome cup shape and, being well filled, it will open freely under any sky. It has proved very hardy, plants under observation having successfully come through the rigorous German Winter of last season, in open beds without any protection whatever. The foliage is luxuriant and healthy. As the long, stout branches are not over thorny, St. John's Fire will prove excellent for a cut flower. It is also exceedingly effective when massed in large or small groups. This novelty was originated by the well-known rosarian, Robt. Tuerke of Meissen, Germany.—*Der Handels-Gaertner*.

Commission Technique de l'Horticulture

The Gardeners' Chronicle (Eng.) of Dec. 18, in its editorial columns, sets forth in some detail the program of the work to be undertaken by the Technical Commission of Horticulture, an important body just established by the French Minister of Agriculture, M. Ruan. The marked development in French horticulture during the past twenty years may be gauged by the statement in the report of the official decree establishing the Committee constituting this Technical Commission, that the total value of French horticultural produce was 295,904,000 francs in 1892, whereas it is now 400 million francs. The Minister states, however, that French horticulture cannot rest content with its position, and efforts should be extended in the direction of improving the methods of production, introducing co-operation among the producers and venders, improving the methods and speed of transport and revising the charges for the carriage of horticultural goods. The establishment of an agricultural parcel post for produce sent in parcels up to 40 kilog. (90 lbs.) in weight will be among the first practical tasks of the Committee.

The constitution of the Committee augurs well for the success of its work. Besides some 16 members who are appointed by virtue of their several offices—the Director-General of Customs, the Director of Agriculture, the President of the National Society of Horticulture, the Director of the School of Horticulture at Versailles, the chief of the Agricultural Enquiry Bureau, and representatives of the chief railway companies—there are also 30 members nominated by the Minister. In making his first nominations, M. Ruan has taken care that all the chief horticultural interests are represented. The list includes seedsmen, florists, nurserymen, market-gardeners, fruit growers, salesmen and head gardeners chosen from the various regions of the country. Among the names of members of the Committee we note those of Messrs. René Adnet, of Antibes; Antoine Rivoire, of Lyons; Victor Lemoine, of Nancy; Albert Truffaut, of Versailles; Amédée Lecomte, of Louvecienne; Philippe de Villemor, of Paris; and Jules Vacherot, head gardener to the town of Paris.

"They 'order these things better in France,' but there is no reason why we should not imitate where we cannot originate," says the Gardeners' Chronicle.

In its first issue in January, 1908, *The Florists' Exchange* contained 28 pages; first issue in January, 1909, 32 pages; this year, 40 pages. This is a showing of steady, healthy growth of which the publishers feel reasonably proud.

Changes in the American Nursery Company

Mr. Fred W. Kelsey has sold his interest in the above named company which was incorporated in January, 1908, with that gentleman as president; Theodore Foulk of the Bloodgood Nurseries, Flushing, N. Y., as vice-president, and William Flemer, of the F. and F. Nurseries at Springfield, N. J., as vice-president and manager.

Mr. Kelsey states that the business established by him in 1875, with New York offices at 150 Broadway, will hereafter be owned and conducted as the F. W. Kelsey Nursery Co., a New York corporation with ample resources and responsibility.

The American Nursery Co., of which, under the recent re-organization, Mr. Theo. Foulk, of the Bloodgood Nurseries, Flushing, N. Y., now becomes president, and Mr. Wm. Flemer, of the F. & F. Nurseries, Springfield, N. J., vice-president and treasurer, will continue the business of that company in the Singer Building, 149 Broadway, N. Y. City. As both of the gentlemen principally interested are managers of extensive nurseries they will be enabled to cater very successfully to their patrons.

Tomatoes as Insecticide or Preventive

French horticulturists are recognizing the value of the Tomato as an insecticide, as appears from several instances cited by the *Revue Horticole*. M. Boucher, the well-known nurseryman of Paris, prepared a decoction of the leaves, with which he sprayed Peach trees infested by green fly, with the result that the pests were destroyed. The solution, therefore, acts much in the same way as a nicotine solution would, with the advantage of being considerably cheaper. Another correspondent of the *Revue*, M. Berlou of Saint Quentin, writes to confirm the observations of M. Boucher, and describes his own method as follows: "For several years I have planted at the foot of each of my Peach trees, of which I have about twenty, a Tomato plant, which is never pinched, and which twines up into the tree. I never have green fly. I also set out some Tomatoes around beds planted with beans, with the same good result."

NEW POMPON DAHLIA PUPPENFEE (Doll Fairy).—While the large flowered Dahlias are, on the whole, the kind most in demand, yet there are many lovers of this flower who prefer the more graceful, small flowered newer sorts of the Pompon Dahlias. These will be delighted with the novelty, Doll Fairy, which is not quite 2 in. in diameter, and often less, forming therefore a class by itself. The flowers, which are pure white in color, resemble in shape large Bellis. The plant makes a height of almost six feet, is compact in habit, and an extraordinarily free bloomer. It has a great future as a plant for massing, especially when the more popular colors shall have been developed. It will be introduced in 1910 by the firm of Nonne & Hoepker, Abrenshurg, Germany.—*Moeller's*.

George W. Ostertag

Geo. W. Ostertag, superintendent of Public Parks, St. Louis, Mo., died last week, Dec. 20, after a long illness, of dropsy. Mr. Ostertag was forty years old and leaves his widowed mother, a wife and four children, also two brothers, Henry and Fred, and a sister Mary, all in the florist business. The funeral took place on Dec. 23 and was attended by a large number of his friends in the trade. The pallbearers were employees of the Park Department. ST. PATRICK.

George Serviss

George H. Serviss, florist, Batavia, Ill., died on December 23 at his home, 75 Harrison st., following an illness of many months. The deceased had lived in Batavia for the past 25 years; he leaves a widow and two children.

Miss Minnie Greensmith

Miss Minnie Greensmith, daughter of Herbert Greensmith, Chief Nurseryman of the City Parks at Cincinnati, O., died at her residence at Price's Hill, that city, on Dec. 18, and was interred in Spring Grove Cemetery Dec. 21. The young lady had a wide circle of friends, was of a very amiable disposition and talented. During the convention of the S. A. F. at Cincinnati last August Miss Greensmith had charge of *The Florists' Exchange* stand and was looking forward with much anticipation to again meeting the trade in Rochester in 1910.

English Horticultural Notes

Carnations The annual general meeting of the Perpetual-flowering Carnation Society was held on Dec. 8. The exhibition was held the same day, and another show has been arranged for next May (19th). The Society has passed through what is hoped are its initial stages of trial and difficulty and now has a bank balance of \$140 with which to proceed. But it was only the self-sacrifice of the responsible officers that saved the Society from collapse in 1908. However, all's well that ends well, and the amateur cultivators are beginning to know of the existence of the Society and are joining. The membership stands at 230, which is 64 more than last year. A "Year-Book" will be published, and a feature of it will be the result of the trials of Perpetual-flowering Carnations as out-door Summer bedding plants. Of course, our "Perpetual-flowerers" are just the Carnations you have, and the reason why such an awkward title had to be chosen for the Society was that the existing National Carnation Society, whose flower is the hardy border type, hardly known on your side, would have nothing to do with the "American" forms. Thus the new society sprang up.

The recent show was typical of its predecessors and there was no novelty certificated. New varieties continue to be raised, and some of your wideawake growers ought certainly to keep an eye upon Stuart Low & Co., and upon Mr. Burnett of Guernsey. The latter has some wonderfully fine and varied Carnations in yellows, fancies, and other shades. Again, for the tenth or twelfth time, I would like to mention his giant-flowered, sweet scented Marmion (scarlet with white edges), which is a strong grower and grand, as shown from Guernsey. He also had a firm-flowered cross bred from Enchantress and Mrs. Burnett, the latter the finest salmon variety we have. These Winter-flowering or perpetual Carnations are extending rapidly in every country garden throughout England, house after house being devoted to them.

The Sweet Pea Society Probably "European Seeds" has told you all about our recent annual meeting and conference. He is always first! Good luck to him. But there can be no two opinions as to the success of the conference, and I commend the idea to the notice of our mutual friend, Mr. Harry Bunyard. This was the order of the proceedings: Annual general meeting at 3 p.m.; dinner, 5.30 to 7 p.m.; conference, 7 to 9.15 p.m. Leading growers came from distant parts of the country, and at least one from Scotland. Of course, 400 miles is as nothing to an American, but we are not bred up to long distances as you are. Mr. Horace J. Wright, the former honorary secretary, now in business for himself, was chairman, and 70 were present. The papers were on "The Im-

perfect Seeding of Spencer Sweet Peas," by W. Cuthberton (Dobbie & Co.), and "Sweet Pea Names and Nomenclature," by W. J. Unwin. An abridged form of these papers is enclosed for publication at the editor's option. A good discussion resulted.

J. HARRISON DICK.

We append the abridged essays, both good papers and worthy of study.

The Imperfect Seeding of Waved Sweet Peas

For 200 years the career of the Sweet Pea ran its course unperturbed. We are now embarked on trying times—all our troubles date from the advent of Cole's Countess Spencer. In the early days we dealt with certainties. In these days we deal with uncertainties. My firm's practice was to sow 4 oz. to 100 ft., and we knew what the produce would be in five seasons out of six. But all that is changed. Last season was altogether an abnormal one, and I am not therefore disposed to argue from the experience of it, but if we look at an average season I think you will agree with me if I put it that on an average the old type seeds were ten times better than the Spencer type. Having said that I have not said all, because a number of the finest Spencers are far below the average, and are nearer being twenty times worse seeders. Think of Etta Dyke and Dorothy Eckford—Clara Curtis and Mrs. Collier or James Grieve—The King and King Edward VII.—Mrs. Chas. Foster and Lady Grisel Hamilton—Earl Spencer and Henry Eckford—Mrs. Hardcastle Sykes and Prima Donna!

The pollen escapes from the anthers at a very early stage, as all of us know who have tried artificial cross-fertilization. In the old type of Sweet Pea the pollen escaped and could not help coming immediately in contact with the stigmatic point, as they were all squeezed up together in constricted or clamped keels in old and Unwin types. In many of the Spencer or waved forms the stigma from the very earliest stage has grown out beyond the anthers. It is quite apparent, therefore, that the chances of fertilization are much reduced when this condition of things exists. The old type and the Unwin type cannot help being prolific. They are abundantly self-fertilized before they expand.

You can readily understand how this delicate process (the development of the generative cells) can be adversely influenced by cold wet weather, either in its preliminary or secondary stage, and especially in the case of Spencer flowers with their more open keels. Let me return to the position of the stigma as shown in the figures. It protrudes beyond the anthers. In some flowers it seems to do this right away from... the earliest bud stage. My theory regarding this is as follows:—We know that the anthers dehisce, that is, shed their pollen in the very early bud stage of the flower. Unless, therefore, the point of stigma, in pushing its way to the outside position just referred to, gets coated or partly coated with pollen, the flower runs an exceedingly poor

chance of producing seed.

Some people argue that Sweet Peas are pollinated by wind borne or insect-borne pollen, and that accounts for the variations we get in so many stocks of Spencer Sweet Peas. I have never been able to subscribe to this theory. The plan we adopt at Mark's Tey is to grow the different varieties in lines of 100ft. long. There may be four lines of The Marquis, followed closely by four lines of Countess Spencer, then four lines of Helen Lewis, and so on. If the wind or insect theory of cross-pollination held good we should not get pure seed, but as a matter of fact we do. Then again, it is suggested that in America there must be insects, unknown in this country, at work there to give us the "fine variations" we so frequently get! I should like to have Mr. Burpee's or Mr. Morse's opinion on this point. Fifty years ago so extremely careful an observer as Charles Darwin wrote: "Whatever the cause may be, we may conclude, that in England the varieties of Sweet Peas never or very rarely intercross. But it does not follow from this that they would not be crossed by the aid of other and larger insects in their native country."

But before concluding, there is another condition of things which I must speak of—the liability of the pods (after they are formed) to rot off. Last season this was particularly noticeable. Close to the footstalk the pods became brown, as if attacked by a fungus. When this happened the pods were doomed. It was only a matter of a few days until they dropped off. This remark reminds me of something else. After the petals dropped on some varieties—notably on Earl Spencer and Edrom Beauty—the young pod appeared all right, but on the slightest touch it dropped off. I think the abnormally cold weather had much to do with this.

To sum up, I must put up as the first and foremost cause of imperfect seeding in Spencer varieties the open keel in conjunction with the protruding stigma, otherwise imperfect fertilization. Then the extreme sensitiveness of the type to adverse weather conditions. Its very shape, the large waved standard, makes it much more sensitive than the old type. How often have we noticed in bad weather the standard almost rotting and falling down and clasping the keel and pod! Sunshine supervening after such conditions made the standard adhere to the keel and pod as they had been glued round them, and they could only be removed by being pulled sharply. To all but the seedgrower this non-seeding is an advantage. It means a longer continued period of bloom, and this must enhance the value of the Sweet Pea as a decorative object. The consolation I would offer the seed grower is this. The choicest things in the world—the things most worth having—are the things most difficult to get. Nature seems to decide for us that the more perfect we make her productions from our point of view, the more difficulty we shall encounter in reproducing them. This law holds good right through the Floral World.

Sweet Pea Names and Naming

I do not propose to deal particularly with the naming of Sweet Peas, but rather to outline a scheme by which I believe growers may be more safeguarded in making their selections of distinct varieties. Our Society is already doing good work, but more must be done if we are to know, with more certainty, which new varieties are worth growing. The Society cannot prevent unfixed stocks being sent out, but it could debar unfixed new varieties from being staged in competitive classes at its shows. As a remedy, I suggest that all new varieties in future shall be sent to the trials, and only those that proved to be fixed shall be eligible for entry in any of the Society's competitive classes. If the Society is firm in this matter growers would soon know which varieties to grow, and who to look to for more reliable information than we have at present. I venture to suggest that a more detailed account be given by the Society of all fixed stocks, as to their type and color, and whether they are quite distinct, or how they compare with varieties already in commerce. Unless any of the unfixed stocks are of special merit they must not be mentioned. It seems useless to waste time over varieties that are badly mixed and of no particular merit. It will be readily seen that if the Society allows only fixed varieties to be staged in the competitive classes and publishes a fully detailed report of the trials from the Floral Committee, the growers will be safeguarded to a great extent, and I believe this work would eventually prove a real benefit to the trade.

I, of course, assume that the Society will deal with those unfixed varieties already in commerce. At the present time the list of too-much-alike varieties is of little help to anyone, but with the detailed report on fixed stocks it would enable us to know which varieties are identical, and what differences there may be between others.

There is a marked difference in the color of Sweet Peas growing in a row as compared with the same variety when bunched, and to arrive at a more accurate description of its colors I make a further suggestion, namely, that a bunch of twelve sprays from every fixed stock (new and old) be brought from the trials to the

We present an illustration of one of the largest houses in the trade, on the establishment of Messrs. Thos. Rochford & Sons, Broxbourne, England, devoted to the culture of Grapes. It is one of many in this vast establishment and measures 50 feet long and 35 feet wide. The variety grown is Black Alicante; 10,800 bunches were cut from this house last season, total weight 8½ tons. The cutting usually commences in September continuing until Christmas. This variety and Gros Colman is chiefly grown, the average crop being about 100 tons per annum; the fruit is widely distributed in Europe and much of it is sent to America.—Courtesy A. Dimmock.

January 1, 1910

London Show and staged under numbers, in their different color sections, and judged by points for color, effect and size. After the judging, each bunch shall be named or numbered as sent to the trials. Should this proposal be adopted, I venture to say it would be the great attraction of the show, and a real benefit to hundreds of members who cannot visit the trials.

A New White Cypripedium

There was great excitement among the Orchid fanciers when Mr. Bolton, of Wilderspool, Warrington, placed before the Royal Horticultural Society a Cypripedium with all the elegance and charm of *C. insigne* Sanderae, but instead of being primrose yellow the flowers were a glistening ivory white. How it originated does not appear to be known, except that Sanderae was the mother parent; yet there were indications in the color and form of the leaves and in the shape of the labellum that *C. bellatulum album* was the father. Whatever its parentage, here was the dream of many an Orchid breeder realized. We were assured that the plant is a good doer, although it is perhaps too soon yet to give it a character for growing, seeing that the plant is only a youngster, now flowering for the first time. If only it is as easy to manage as its mother, *C. insigne* Sanderae, is—and as every Orchid grower knows, this is the perfection of a Cypripedium—then in the white seedling from Warrington, which is to be known as C. Boltoni, we have indeed a champion Orchid. It is difficult to say what a hybrid Orchid is going to do. Some hybrids grow like weeds, ever so much better than their parents, but there are others that are stubborn and unsatisfactory. Therein lies the charm of Orchid breeding; one never knows what he will get until the flowers tell him. Sometimes, from the cream of parents, carefully and scientifically mated, the most worthless of mongrels are bred, and sometimes from a chance mating, as in the case of this white Cypripedium, a delightful seedling results. You never can tell, not even if all the knowledge of Mendel and his disciples is brought to bear on the mating; there is that glorious uncertainty which makes plant breeding as full of interest and surprises as cricket is. —*The Field, Eng.*

The Parcel Post Agitation

(Continuation of Mr. W. R. Shelmire's paper from page 984, issue of Dec. 25.)

There is much of misinformation concealed in the pamphlets we have read in opposition to the Parcel Post. For one thing, they fail to mention the one great industry that would be adversely affected by a cheapened Parcel Post—namely, the express companies—which omission is very significant. In all the attempted legislation to obtain a better Parcel Post, we find the pathway blocked by the lobby of the express companies. Every postmaster-general for years has recommended a liberal Parcel Post only to be thwarted and defeated by the insidious connivance of these rich corporations. In our opinion there is nothing that would lower express rates quicker or compel a better service than a well ordered and liberal Parcel Post.

Suppose it to be true, as the opponents of the measure say, that the express companies would carry all the near-by packages and leave the long and unprofitable hauls to the Post Office, is it not plain that, in order to get the trade, the express companies would have to reduce their rates or lose the business? We contend that this compelled reduction would be a vast saving to the country and worth all it might cost. But we do not believe the express companies would get all the short hauls or any large portion of them. We think the people, as a rule, would prefer to deal with the Post Office because it will be more convenient and less troublesome. We believe, with a cheap Parcel Post, the Government would get the great bulk of the business, short haul as well as long haul, and the express companies would improve their service and cheapen their rates.

We hear a great deal of the deficit of the Post Office. Supposing there is a real deficit, what difference does it make if the country as a whole is getting its money's worth, and if the Department is run economically and on business lines? It really depends on the point of view. For instance, if we look upon the Post Office in the same way as we would a private corporation, very likely we see nothing but ruin in the reckless way in which it is managed. But it is not a private corporation, and we must, therefore, judge it from the broad plane of public utility. From this point of view we are very sure that the United States Post Office is a mighty factor for the welfare of the country and in the fostering of all industry. It may be criticised, perhaps, in paying too much to the railroads for transportation; at least part of the deficit can be traced to that source. Probably the Department cannot help itself under present conditions. We would hardly expect the Government could get as low rates on carriage as the express companies when we consider that large blocks of stock of these profitable corporations are held by men high in the councils of the railroads. The Government has no such pull, of course, and has to pay all the traffic will bear. We copy the following from the report of the Third

Assistant Postmaster-General for the year 1908, the current year's report not being available: "While this deficit (\$17,000,000 in round numbers) is the largest in the history of the Post Office Department, it was for the most part anticipated, due to increases in salaries to postal employees. These increases as shown by the report of the auditor, amounted to \$9,891,321.92. But for these increases the deficit would have been \$7,018,957.07. Had the usual percentages of increase in receipts been maintained, there would have been an increase of revenue over 1907 of \$17,110,122.51. Under normal conditions and without the increases in salaries there would have been a surplus of \$2,234,563.85 in the postal revenues for 1908."

Another source of deficit is in second class matter: papers and periodicals in bulk at one cent per pound. This service costs the Government \$57,000,000 in uncompensated service; this amount being the cost of handling and transporting nearly 750 million pounds of second class matter over and above the direct revenue derived therefrom. But it is justly claimed that this second class matter is instrumental in originating a large amount of other classes of mail matter, particularly first-class, which pays a handsome profit.

Still another source of deficit is the franking privilege and matter carried for the various Government Departments. If this was paid for to a privately managed post office the Government would have to pay over \$16,000,000 for the privilege, and for the same courtesy extended to the Congressmen and certain semi-governmental activities an additional sum of \$4,000,000.

Then we have the Rural Routes which cost last year, \$30,000,000. These routes now reach 18,000,000 of patrons. It is suggested that a rural parcels express be established to be confined entirely to rural routes, and in this extra service there would be no cost for railroad transportation; and the service, it is hoped, would become self-supporting. Whether it would or not, the country is committed to it and will not turn back. The service rendered to the farming community can not be measured in dollars and cents and, on the whole, it is a paying investment to the country at large; socially, politically, commercially and intellectually. But it pays even in dollars and cents, for persons who have made a study of the subject estimate that real estate values in rural districts have increased \$750,000,000 since the establishment of the rural free delivery system.

It will be seen that, in several directions, we can easily account for the apparent deficit of the Post Office Department. In reality it has to its credit a large yearly surplus—in social and business benefits rendered. While we fully realize that it is very desirable to have the post office self-sustaining, we consider that the matter of a reported deficit is not necessarily to be condemned, and should not stand in the way of an improved Parcel Post. But the improvements should take place step by step and as fast as public sentiment demands them.

In conclusion, we would say to the small retailer that in our opinion he has little to fear from his big competitor, whether it be the great mail order house or the big department store. The retail trade of this city is so great in volume, we are quite sure there is enough for all—if the proper methods are taken to secure it. The retail trade of the country is so prodigious that it can-

not be monopolized by any combination of capital. If we are to stop all improvements in transportation, or facilities in handling the mails, or reduction in express charges, or price of car fare—or if we are not to encourage any project because some one is going to get an advantage out of it, or some one is going to be hurt by it—then all progress will cease. There is nothing good that does not have its drawback. All things that are of advantage to the masses of the people are in every instance a disadvantage to a few. The very same arguments now presented against the Parcel Post have heretofore, in substance, been presented against every scheme proposed to help the masses of mankind.

Note.—In preparing this paper I am greatly indebted to the following gentlemen for valuable information: Mr. John Wauamaker, formerly Postmaster-General; Mr. Newton M. Brooks, formerly Superintendent of Foreign Mails; Mr. C. M. Summerfield, sec'y Merchants and Manufacturers' Association, Phila., Pa., but we in nowise use their names as an endorsement of the views expressed.

The French trade in flowers has grown from \$57,000,000 to \$77,000,000. The reason for it is stated in a consular report:

The extension of the Parcel Post privileges to the shipment of cut flowers is considered as one of the principal causes of this increase.

Now, if we could have any such parcel post in this country there would be an even greater increase in the business of mailing all classes of goods. How do you like to have your country go plodding on behind the procession in the dust of all Europe?—R. N. Y.

Editor The Florists' Exchange:

We wish to register our vote in favor of Parcel Post throughout the United States.

From our observation we have come to believe that Parcel Post would be even a greater blessing to the farmers and those living in the rural districts, than rural free delivery, and is really more important. Express rates on small packages are exorbitant and, in many cases, prohibitive. This applies not only to our line of goods but to many necessities required on the farm and in rural sections.

We sincerely trust that sufficient pressure can be brought to bear upon Congress and the Post Office Department, to establish Parcel Post in the United States.

THE GRIFFING BROTHERS, Nurserymen.

Jacksonville, Fla., Dec. 22, '09.

[We all realize the excessive charges of the express companies and, in this business particularly, expansion of trade is kept down for the very reason that a customer does not care to pay fifty cents expressage on a fifty-cent purchase.]

BELLIS PERENNIS RANUNCULIFLORA ALBA TAUSENDSCHOEN (Thousand Beauty).—(This is a white variety of Bellis recently put on the market by the firm of M. Herb of Naples, Italy. Like its red progenitor, it has a handsome, large very double flower, and is a free bloomer. Borne on long, erect stems, it may be used not only for pot culture and bedding, but is also especially suited for floral pieces.

Our illustration is that of a consignment of Palms packed and ready to be loaded on the train for shipment to America. Immense quantities are grown at the establishment of Messrs. Thos. Rochford & Sons, Broxbourne, the largest nursery of its kind in England, chiefly Kentias in all market sizes. Giant Roses in pots is a special feature, together with thousands of Orchids, Ferns and foliage plants which only constitute a portion of the great variety of plants grown under the glass covering about 45 acres.

The Advent of the Year 1910

Up to a certain age in life the opening of a new year discloses a multitude of men who have waited for that epoch in order to put into effect certain resolutions for self improvement which they inwardly felt they stood much in need of. No other day in the year would fit the case and if, unhappily, the resolutions did not work out right on that very day a lapse took place and the reformation was postponed to a year thence, and all things with that individual remained as before—if they did not get worse. Personally, we are inclined to the belief that when that certain age has been reached, the individual who has been struck by a sense that he is lacking in some way the degree of perfection he would attain to does not wait for a New Year day to come, but, adapting the mood as it seizes him, at once and there and then makes a new start in the direction desired.

All of which leads us to advise those of our readers who may unfortunately make a break in their self imposed vows in the first day or the first week of the New Year not to wait an entire twelvemonth before renewing the attempt but to courageously tackle the inward enemy and at once make a fresh start.

In addition to the New Year vows there are other thoughts which are apt to float to the surface on that day and which seem opportune enough to talk about, for instance:

Exercising Patience with an Awkward Employee—If the man shows a spark of promise in any part of his composition, give him another show.

The Slow Creditor—If you are satisfied the man is honest and wants to pay, give him another chance; don't down him forever through a judgment or an execution.

The Weather—It is not always going to be bad or unfavorable.

The Markets—Have their ups and downs. Watch them all the more carefully until you secure a better understanding of how to catch them on their up side.

The Contractor's Delay—He has broken his solemn promise over and over again and is away behind on your work. If you have had the foresight to tie him up with a forfeiture clause not your's will be the worry; but if you haven't (as is just as likely the case) don't swear at him or call him names for that won't help matters. Jolly Him All You Can.

That Profit and Loss Account—If you had such a rush of work at the holidays you couldn't get that set of books started with the first of January, open them up the eighth of that month. In this case it is better to be late a week than a twelvemonth.

The Old Greenhouses—Good stock has been raised in very inferior structures as these go today. Better wait until there's enough money free and clear to pay half the cost of the new proposition than be worried for a length of time with unpaid bills and all that this business condition implies.

Have a Vegetable Garden—By all means plant a good generous vegetable garden; you have only one life to live, and you and your family do certainly deserve a few of the good things of this world as you travel along.

Make a Flower Garden for Your Wife—Never neglect this. You may have acres of flowers and plants to sell, and greenhouses full to overflowing for the same purpose—but they will not take the place or give your good wife one-thousandth part of the real pleasure "her own flower garden" will.

Buy Good Seeds—In seeds the best are the kind you want. Never mind the price, the reliable seedsman will take care of that, and you can rest assured he will not overcharge you. In these days of advancement in every line of work it is not at all a difficult matter to obtain the best.

The Dissatisfied Customer—Never allow yourself to have one; at least, don't let it be through your fault. To knowingly let a man get the best of you once or twice won't ruin you. Of course, this suggestion bars out the professional sharper.

The Man With a Grievance—We meet many of his kind in a year. It's a study in human nature and a source of amusement to deal gently with him. And, many times, he proves not half so bad as you first thought; it's just as often as not his point of view that clashed with yours.

The Help Problem—Not near as difficult as you thought if you put yourself, once in a while (mentally) in the position of the Help.

For Better Education—Study all you can. Visit all in your line all you can. Attend conventions whenever you can.—Read *The Florists' Exchange* always.

Want to Make Money—Sure thing. Honestly, of course. Then remember that talent and genius are good possessions, but can never displace the ability to "everlastingly keep at it." Add common sense to your striving and you will come out all right.

Discouraged Occasionally—The brightest and apparently the lightest hearted man you know suffers worse from this trouble than you do; don't let him shame

you in bearing up under difficulties not of your own making.

Striking Back—Never lose your dignity when committing that act. Hit back in a genteel way whether you are using a pen or a poker.

Precaution—Forethought generally outwits afterthought. Thrash out thoroughly all the pros and cons before you commit yourself. Better lose an apparent opportunity than fall into a financial desert.

Hesitation—"He who hesitates is lost."—Old Saw. We don't quite agree with Old Saw. Better hesitate soberly than act recklessly.

Many more suggestions for the New Year might be offered but, as it is, we may have already offered a superabundance.

Geranium Dr. Lincoln Cothran

Two New Geraniums

We present herewith a picture of Geranium Dr. Lincoln Cothran; description was given in our issue of Oct. 16, page 570.

Of seedling No. 8, the raiser says: "This is probably the biggest Geranium in the world. The single flowers are $2\frac{3}{4}$ " to 3" in diameter, the trusses are big, and borne on long stems. The color is dark red, somewhat akin to Jacquerie. It is a cross between Meteor and

Geranium Seedling No. 8

Queen Olga. Here it flowers all the year around; I think it has a great future."

"Seedling No. 15 is a cross between Beaute Poitevine and Meteor; the flowers are about $2\frac{1}{4}$ " across; the trusses are immense; under favorable conditions there will be 60 flowers on one truss. In color it is copper salmon pink. The growth is dwarf and stout." The picture sent us shows seven trusses on a young plant. The originator of the above three new Geraniums is Richard Diener of Colma, Cal.

The National Rose Society

The National Rose Society (Great Britain) has a membership of 3797; its cash on hand Nov. 30 was £436, 10s. 6d.; its reserve fund in English 2½ per cent. consols was valued at £750. It has paid out in cash prizes, medals, etc., during the past year £818 3s. 7d. Its Summer show cost the Society £422 3s. 2d., exclusive of prizes. Its income from membership was £1919 6s. 5d.

At the recent annual meeting the first Dean Hole Memorial Medal was awarded to Rev. J. H. Pemberton in recognition of his assistance to that Society and for his contribution to the literature of the Rose. The Dean Hole medal is no ordinary one, such as was presented for a seedling Rose on a championship; it was intended as the highest award in the Rose world.

Edward Mawley, the honorable secretary of the Society, in October last made a record by obtaining 200 new members inside of twenty-six days.

Nine hundred new members joined in 1909. The total number of affiliated societies is 55. During 1910 the following publications will be issued to its members: "The Rose Annual for 1910," and new and revised editions of "Hints on Planting Roses," and the "Enemies of the Rose."

New French Roses

Messrs. Barbier & Cie. of Orleans, are introducing several new Roses, which they describe as follows: LOUIS BARBIER (Pernetiana), cross of Madame Bérard and Capucine bicolor. This is a very vigorous Rambler, putting forth branches from 3 ft. to 11 ft. long, entirely covered with flowers which appear as early as May. The flowers are semi-double, borne in sprays of from two to six, coppery red in color, turning to bright purple when fully opened; the exterior petals being a coppery yellow, darker at the base. This is a striking new color, as brilliant as that of Capucine bicolor. The leaves are thick and of a dark shining green. Although it also flowers during the Fall it cannot be considered absolutely as a Remontant. This novelty combines the great vigor of Madame Bérard with the shadings of Capucine bicolor, while its own color is wonderfully effective at a distance.

DESIRE BERGERA, cross of Wichuraiana and Bengale aurore.—This is a vigorous Rambler and free bloomer. The flowers are of medium size, very double, coming in sprays of from two to six, of a coppery rose pink, shading to light coppery red, a color that is new among the Ramblers. It is a very free bloomer.

JOSEPH LIGER, cross of Wichuraiana and Irene Watts.—A vigorous variety blooming very freely. The flowers are bunched in panicles of 20 to 30. The inner petals are of a delicate canary yellow edged with clear pink, the outer petals are cream white. The flowers are about 3 in. in diameter.

AVIATEUR BLERIOT, cross of Wichuraiana and Wm. Allen Richardson.—This is a vigorous Rambler, with dark green shining leaves. The flower is of medium size, full and of a saffron yellow color with golden yellow center, the most distinctly yellow of this series. The flowers are bunched in corymbs.

WHITE CECILE BRUNNER.—A sport of Cécile Brunner, having preserved all its good qualities. Pure white, saffron and chamois yellow flowers are found on the same plant.—*Revue Horticole*.

Messrs. Léon Chénault et fils of Orleans, are introducing a variety obtained by M. Henri Cayeux of Lisbon, which is described as follows: ETOILE DU PORTUGAL—cross of Rosa gigantea and Reine Marie Henriette. This is the first hybrid of Rosa gigantea. The thick foliage is bright green. The flower is large, shapely, with uniform petals of a fine salmon pink with yellowish base, a magnificent color new among the Ramblers. The bloom is perfect in form, and very lasting. This novelty has proved as hardy as most of the Teas and Ramblers.—*Revue Horticole*.

PRINCIPAL A. H. PIRIE.—This makes a shapely plant of goodly size. The flowers, borne on straight, stiff stems are very double, open freely and last a long time. The inner petals are of a cochineal pink, lighter on the under side; the outer petals are silvery pink. This is a fine, freely blooming variety.

The equally well-known rosarian, Pierre Guillot of Lyon-Montplaisir, announces the following novelties: CREME SIMON, Hybrid Tea; very vigorous, with erect branches, and ample dark green shining foliage. The flower is very large, full, and opens in Camellia shape; the color is cream white, with the center occasionally salmon tinged with carmine. It has a delicate perfume. Awarded a gold medal at Clermont-Ferrand.

Newport, R. I.

Christmas trade here proved the best in years, in both plants and cut flowers, and all appear to be well pleased with the amount of business done.

Gibson Bros., as usual had stocked up heavily and in many lines were entirely sold out; in fact little was left over.

C. Oscar Schultz had made heavy preparations at his Broadway store and found a great demand for all kinds of stock.

In flowering plants the best sellers were Begonia Gloire de Lorraine, Azaleas, Cyclamens and Poinsettias, the last and the Begonias being early sold out; many more could have been disposed of.

A surprise was the large number of Ferns in pans and in medium-sized pots sold, among them being Nephrolepis Bostoniensis, N. Whitmanii and N. magnificum. Small-sized Palms were also in good demand.

In berried plants the Jerusalem Cherry was the favorite. The demand for Christmas greens was excellent.

In the midst of the rush a lot of funeral work came in, which kept Mr. Schultz's eleven hands and three delivery wagons on the go. A special feature was made-up baskets of greens filled with flowering plants which took well and brought good prices.

In cut flowers, as usual, red Carnations were early sold out and no more to be had; these brought \$1.50 per doz.

Roses brought \$2.50 to \$3 per doz.; Violets, from \$2 to \$2.50 per 100, the supply being short.

At the Stewart Ritchie store the same condition existed, even Carnations which are grown in quantity at his own greenhouses, in all colors, were entirely cleaned up.

As a rule no advance in prices are made here for the holidays.

Less than usual was done in the way of decorations in the churches.

ALEXANDER MACLELLAN.

Kalamazoo, Mich.

That business was good is the verdict of the local trade and a feeling of satisfaction is apparent. The florists were indeed fortunate when the weather moderated on Wednesday and so made it easier to effect deliveries as well as bringing out the buyers.

A very large business was done in pot plants, especially those in bloom, and a more liberal mood seemed to prevail among the purchasers.

Holly, wreaths, and Christmas balls sold well, the latter almost entirely doing away with the paper bells which are now mainly carried by the department stores and even there have slow sales. Holly, generally speaking, was poor, but the Boxwood was good and was a heavy seller both in wreaths and balls.

Cut flowers were scarcer than usual but the advance in prices will probably more than balance the loss on shortage. A pleasant factor to record is there was no particular complaining of the advance in prices, showing the public is getting acquainted with the law of supply and demand even in flowers.

Van Bochove's had a gorgeous display in their store and kept a dozen or so men busy all the week as well as several delivery teams. The Central Nursery Co. also did a big business and handled a large quantity of Christmas trees.

The Fisher Co. had a finely decorated store and apparently broke all their previous records in amount of business done.

W. Thomas supplied most of the Christmas balls at the stores in town; and those doing business at their greenhouses cleared out well.

Shipping trade, of course, was most excellent; the prices prevailing being the Chicago quotations, the business being right up to the limit of supply.

The prospects for the coming week look favorable and, no doubt, good prices will prevail.

Altogether the trade wears a satisfied look and, on behalf of the florists in this vicinity, I wish The Florists' Exchange and its readers A Happy and Prosperous New Year. S. B.

Los Angeles, Cal.

Christmastide

Christmas spirit fills the atmosphere and holiday shoppers fill the streets and crowd the stores. The overwrought word "prosperity" has been abroad on this Coast for several years, and to a greater degree this season than during any of its predecessors—no stomach will go hungry, no child unclad, no hearthstone without fire, in Los

Angeles—this year. The spirit of the Christ, whose birth we celebrate, permeated the lives of our citizens and fraternal and charitable organizations to such an extent that the one ambition of each and all is to minister to the physical necessities of the unfortunate members of the community.

Our postmaster maintains a bureau, with seven volunteer women assistants, which investigates the appeals of children who, in their simplicity, address him as Santa Claus, in letters pathetic and appealing. One wealthy woman, whom the writer knows, called in a gardener—whom she had hired for a day at 50c. an hour—and made diligent inquiry as to any one in his part of the city who might lack food, fuel or clothing. When he showed a little impatience at her interruption of his work she gently but firmly bade him be seated and assist her in the work of finding the destitute, with the remark that the care of the garden was of less importance just then than ministering to the necessities of her fellows.

And yet there are men and women whose views are so narrow and minds so dwarfed that they never fail, when opportunity presents, to tell us that society is growing more corrupt, humanity more degenerate, and the world deeper in moral depravity than at any time since history has been recorded; whereas the fact is, never since the chorus "Peace on earth, good will to men," was sung by an angelic choir over the hills of Judea, two thousand years ago has the spirit of Him, whose birth they announced, so filled the world as at this present Christmas Day.

Flowers in abundance adorn our flower stores. There may not be enough to meet all demands, as has been the case for several seasons past, but a slight shortage is better than an over abundant supply. The cool, frosty nights have ruined Poinsettias and Tea Rose bloom, while copious showers will damage outdoor Carnations. Violets, grown by the acre, are not up to their usual standard of excellence and less abundant than usual at this season of the year. Our Christmas Berry is unusually plentiful and beautiful this season. Wreaths of our wild Plum, *Prunus ilicifolia*, are made to simulate the Holly wreaths of the East, by weaving the scarlet berries into them.

Never before have so many Jerusalem Cherries—the oval berried sort—been put on the market. Grown in the open and potted up into six-inch pots, they have been selling readily at one dollar each.

The several store windows show the individuality of the owner. O. C. Saakes has plants and cut flowers beautifully arranged, Adiantum Farleyense predominating. A. F. Borden's window was decorated with baskets of various sizes, filled with California Christmas Berry, branches, and some Cycas leaves ornamented with bands of red ribbon. Tom Wright had masses of bloom of all sorts, artistically arranged. The Wolfskill Store never appeared more beautiful. Roomy, it is furnished in massive vases, furniture and tapestry. Goldenson had a bank of the berries referred to above in his window. Certainly, Nature has been lavish with her gifts to us on this Coast this season.

Germain Seed Co. had on sale the finest flowered *Primula obconica* ever seen in this market.

P. D. BARNHART.

Dec. 22, 1909.

Firms Who are Building

BATAVIA, ILL.—The Batavia Greenhouse Co. is adding a second story to its office building in South Batavia ave.

MILWAUKEE, WIS.—Hindoe Bros. have erected a modern greenhouse on the north side of this town, at a cost of \$8000.

SOUTH PARIS, ME.—E. P. Crockett has built a new greenhouse at Porter st., 27 ft. by 50 ft., with an office building 12 ft. wide across the end.

NEWPORT, R. I.—Arthur Griffen, not finding conditions congenial at Port Washington, L. I., has returned to Newport.

MARION, IND.—F. W. Herleman is building a house for Carnations, 21 by 104 ft., using the Garland iron gutter and iron purlins. He is also getting ready to erect a house for Roses to cover a space 43 by 106 ft., and will use the Garland truss construction and iron gutters; the gutter will be 8 ft. high, with cement block walls. The Evans ventilating machines are used at this place entirely.

A Hunt Ends in a Tragedy

Dr. Lewes Krautter, assistant professor of botany in the University of Pennsylvania, and Ernest J. Macfarlane, son of Dr. John M. Macfarlane, head of the botany department in the same institution, were drowned or frozen to death near Wildwood Crest, N. J., last week. They had been on a hunting expedition, and it seems probable their boat upset during a windstorm.

Stock Sold Must be True to Name

An English purchaser of Orchids recently brought suit against the seller to recover £100 for breach of warranty. A plant named *Cypripedium* insigne Francis Wellesley, stated to be a great improvement on C. insigne Harefield Hall, was purchased from the defendant, but on flowering proved to be C. insigne Harefield Hall. The judge's verdict stated that all the parties concerned seemed to have acted in perfect good faith, but £70 and costs was ruled in favor of the plaintiff. In another similar action judgment was also given for the plaintiff.—*The Gardeners' Chronicle* (Eng.)

Washington, D. C.

Washington, like many other cities, had a "white" Christmas; the second snowfall of the season, with a veritable blizzard all Saturday night. The chief inconvenience suffered locally was the work of delivery which was hard on man and beast.

Christmas sales were excellent, but with prices ranging somewhat lower than upon similar occasions. There was a lively demand for all classes of cut flowers, and small pot plants ranging from 50c. to 75c. Azaleas led in public favor and Poinsettias, with which the market was well stocked, moved slowly. The supply of all stock was about normal.

JAS. L. CARREBY.

Concord, N. H.

Trade at Chas. H. Barrett's was at least 35 per cent. better than last year, and was about evenly divided between cut flowers and plants. Violets and Roses led in cut flowers, and Azaleas and Cyclamens in plants. \$2 to \$3 was the average price for Roses; \$1 to \$1.50 for Pinks; \$2.50 per 100 for Violets.

C. V. KIMBALL.

Hoboken, N. J.

Business good; better than last year. Stock fine; mostly plants were sold, as cut flowers are too high for this neighborhood. Plant baskets, made up of Crotons and assorted colored foliage, were good sellers. Hampers and handle baskets about even in demand.

M. HENDBERG.

Nashua, N. H.

Our Christmas trade this year far surpassed anything in former years, in fact it was ahead of our expectations. It commenced early and kept up a steady increase until we were completely sold out of everything. Flowering plants of all kinds were in great demand, Azaleas taking the lead. Cut flowers of all classes worked up to the last. Green pottery had an unusually good sale, and brass jardinières and Fern dishes, of which we have just added a large line, were in great demand. Christmas greens also came in for their share and attention, and in fact kept us on the move throughout the late hours filling orders.

W. W. POWERS.

N. Y. State College of Agriculture

Assistant Professor H. H. Whetzel of the department of Plant Pathology, established at Cornell University, Ithaca, N. Y., in 1907, reports that in the Spring of 1908 quarters for that department were finally completed, since which the time has been largely taken up with teaching and becoming established in the new buildings. From henceforward this department expects to be in a position to assist growers who have trouble with plant diseases.

FREEMONT, ILL.—The recent heavy snows caused havoc at the greenhouses of John Bauscher, Jr.; the snow packed upon the glass and, when the thaw started, became heavy, thus breaking the glass in many places.

Prices Advertised in these Columns are for THE TRADE ONLY

We wish to impress upon our readers that all questions intended for this department must bear the name of the sender, not necessarily for publication but as a guarantee of good faith. We will endeavor to answer all questions submitted to us by subscribers, but we cannot recognize anonymous communications.

IDENTIFICATION OF PLANTS

When sending specimens for names correspondents should send some lower leaves of herbaceous plants as well as upper ones, and of all plants, flowers and seed vessels if possible. In addition to this, if stated whether it be shrub, tree, herbaceous, wild or cultivated, location where growing, it would often enable identification of specimens difficult to determine otherwise.

(1) Covering native Rhododendrons.—Do you think it really necessary to cover our native Rhododendrons and protect them with cedar boughs here in Conn.? The Rhododendrons in question were planted a year ago this Fall, are on the warm side of the house, have had the best of care and are well established. N. H. N., Conn.

In their native wilds there are many things affording shade to Rhododendrons in winter, preventing the browning of the foliage, which they do not meet with in cultivation. Yours are of the native sort, you say; and being on the warm side of the dwelling one would not look for them to be damaged by the cold of winter. Many persons hereabouts who have such Rhododendrons and other hardy evergreens shade them by boughs or in some other way; not that they fear injury to the plants, but to preserve the fresh green color of Autumn to the leaves, instead of having the dull brown look which winter gives to so many of them.—J. M.

(2) Fungus on Palm Leaf.—F. Nurseries, Conn.

The fungus on the leaf of Phoenix submitted is *Graphiola phoenicis*. It can be kept in check by a weak solution of Bordeaux Mixture.

(3) Specimen for Name.—M. F., New York.

Your sample arrived dried up. It is a *Cytisus*, but not having any description we are unable to determine the variety.

(4) Christmas Plants under Glass in Summer.—For another Xmas I want to have a few nice Cherries and Peppers in 4 to 6-in. pots and would like to know if I can grow them under glass all Summer, as I have not much room outside to plant in the field. I want also to have some Begonias such as, *Erfordii* and *gracilis*. When shall I sow the seeds and how shall I handle them through the Summer?—G. A. R., New York.

It is possible to grow Cherries and Peppers under glass for Xmas, and seed should be sown for them about May 1. Transplant as soon as the seedlings can be handled, and give room to the plants as they develop, to keep them from becoming straggly. Great care must be exercised in watering, when plants are in bloom, so that the pollen is not washed off, as otherwise the plants will have no fruit. Shift as the plants develop. Sow seeds of Begonias about January 15, and transplant, when large enough to handle, into good soil. Repot as necessary, and do not give too much water. Plants should be pinched as occasion requires to make them shapely. Begonias enjoy a mixture of leaf mould in the soil.

(5) Poinsettias Wilting.—We have been growing Poinsettias for many years past and have never had any trouble with them until this year. They appeared while growing just the same as ordinary, but we cannot make them show up. When cut, the leaves drop down and look bad. Have tried burning the stem and also dipping it in hot water of various temperatures, but it seems to do no good. What do you think the trouble is and how can we remedy it?—C. F., Iowa.

Your trouble seems to be one that bothers many florists, and we can only account for it by the flowers being subjected to a too sudden change in temperature. Plants should be hardened off a few days before being cut.

(6) Sash House for Carnations.—W. K. Long Island.—Your suggestions for building a sash house for Carnations would be of no avail, when consideration is taken of the low cost of regular building material. Get in touch with some greenhouse builders, who are advertisers in our columns, and we feel sure you can make a good bargain for a serviceable greenhouse at a reasonable cost. Sash houses are a thing of the past.

and Nos. 476 and 478 York Avenue

PHILADELPHIA, PA.

January 1, 1910.

ers:

our friends and the introduction to The Farm Annual has been rightly so addressed for many years past. We bring all that is possible to insure your success in gardening, and are sure that you are pleased also to know of us, you may be interested in reading the articles on pages 4, 12, and 34, from all four American Trade Journals. BUSINESS has shown a steady—and almost uninterrupted—growth since its beginning, in 1876, in the little building pictured below. Compare this with the present Burpee Building and also our latest purchase, illustrated on page cover. The total business for an entire year "in the seventies" was less than what we do now in a week. OUR OLD CUSTOMERS,—many of twenty to thirty years' standing,—need no new assurance of fidelity on our part. Our reputation for SEEDS OF QUALITY has been builded upon the constant aim to maintain the quality of our famous motto:—

Burpee's Seeds Grow and are The Best Seeds that can be Grown

This Catalog for 1910 (of which the first edition is more than four hundred thousand copies) may reach some persons, however, who never before have had an opportunity to try BURPEE'S SEEDS. To such we would say all we ask is a fair comparative trial,—no matter how small your first order may be. All stocks are thoroughly tested and we sell only those proved to be good—the best it is possible to produce.

are Grown by Burpee! As a rule, this is absolutely true! Those varieties of seeds that cannot be produced to the highest standard of excellence under private contract, subject to our personal inspection during growth in such sections of America and Europe as are best adapted to their proper development. We buy no seeds upon the open market—and yet this rule occasionally excepted this season is in the case of Garden Peas, for the reason explained at bottom of page 80.

for your many courtesies during past years, and trusting that the same friendly spirit may

Sincerely and gratefully yours,

New Jersey, and The New BURPEE RANCH in California.

in the introduction to our retail catalog—BURPEE'S NEW ANNUAL FOR 1910. If you do not receive a copy of this "Leading Catalog" for 1910, please write for it. At the same time, if you appreciate quality in seeds and are willing to pay a fair price for the best seeds it is possible to send you also (provided you are a market gardener or florist) a copy of BURPEE'S BLUE LIST FOR 1910—the most complete list of seeds for the profit. While our prices may be higher than those of some other houses, yet the quality of the seeds in every variety is guaranteed. We aim always to excel in quality rather than to compete in price. Shall we send you one or both catalogs?

E BURPEE & CO.,

PHILADELPHIA, PA.

Dimorphotheca Aurantiaca

This is one of the showiest of Summer garden flowers and as well one of the most remarkable annuals that has been, we may say, reintroduced during the last few years. It is not exactly a novelty, for, according to a writer, in the *Revue Horticole*, it was cultivated, at least in England, for a period of more than 40 years, between the end of the eighteenth and the beginning of the nineteenth centuries, as appears from illustrations in the great iconographic work of that time. It was described in the *Botanical Magazine* in the year 1797, under the name of *Calendula Tragus*, again in the same publication in 1818; and in the *Botanical Register* in 1815. After that, it was neglected and forgotten for a long time, being reintroduced only in the beginning of our own century by the firm of Barr & Sons, who obtained the seed from Namaqualand, South Africa. In France it was exhibited for the first time last April, before the National Society of Horticulture, when it was awarded a certificate of merit.

The pre-eminent qualities of *Dimorphotheca aurantiaca* are many: in the first place, the flowers are exceedingly gay and brilliant in color and love to unfold under the full sunlight, whereas under the same influence many other flowers are prone to close or fade, and it is a very free and long continuous bloomer; it prefers a sunny, warm and dry location, not demanding much water; finally, it is very easily cultivated and propagated and will begin to flower within two months after having been sown. It may be used both for baskets and borders; its bright orange flowers harmonize well with other colors and will also afford effective contrasts. For effect in mass, at a distance, it is cheaper than the *Geraanium* because of the ease and rapidity with which it may be propagated.

This plant received honorable mention at the Temple Show in London, in May, 1908, and we are pleased to see it prominently figured in Burpee's Annual for 1910.

Plants in Sick Rooms Advocated

The abundant use of house plants in the sick room was advised in a paper on the subject read before the Stark County Horticultural Society, at a recent meeting at the Stark County Infirmary, Canton, O., by Dr. M. D. Dougherty of Massillon. Dr. Dougherty asserted that the old custom of not permitting house plants in the sick room was a fallacy and advised their use both in the sick room and throughout the house. The claim is made that they absorb the poisonous carbonic acid gases thrown off by the body and that they also assist in neutralizing other poisonous gases.

Artificial Flowers

Editor The Florists' Exchange:

Enclosed you will find an advertisement that I clipped from the New York Times of Dec. 28, 1909, covering artificial flowers. Surely this line of business is making dangerous progress; wherever you go you see artificial Fern dishes and artificial flowers. It is not alone the so-called middle class that use them, but also the so-called upper class.

When will the florists waken up and pay heed to the vast inroads this line of business has made, especially for the past three years.

In the EXCHANGE of Dec. 11, under the title of "Our Mission," you have undertaken to assist, through legislation, to bring about two much needed reforms, the discontinuance of free seed distribution, and the establishment of a parcel post. Make it one more, the mission to discourage the use of artificial flowers.

E. H. VOLKMANN.

New York, Dec. 28, 1909.

The advt. to which Mr. Volkmann refers is one of Saks & Co., New York, headed "Where Are the Roses of Yesterday?" and then proceeding to dilate upon the beauty, variety of form and lasting qualities of the artificial flowers they offer: Violets, Roses, Gardenias, Lily of the Valley, Jonquils, Orchids, etc.

Frankly, no one has a right to interfere with legitimate business and even when the red rag of artificial flowers is waved at us, however it may excite our wrath and displeasure, we have to bear with it as best we can, controvert its value all the time and in open, manly fashion, use every art of voice and persuasion to keep that article from gaining too solid a foothold.

Reception Hall Decoration. American Beauty Roses, Easter Lilies and Smilax
W. J. Palmer & Sons, Buffalo, N. Y.

That the artificial flower will ever supersede the natural, or affect the sale of the latter to any appreciable degree, we much doubt. Many of us are compelled to wear artificial teeth, but we keep the fact close and we think it is much the same with the artificial flower; people who wear them are not saying much about them for fear they will hear a disparaging remark.

If the trade, generally, will offer fresh goods only, flowers that will keep as they should keep, the danger of these being supplanted by the artificial product or worn to any extent in anything except hats is, we believe, very remote.

A Unique Decoration by Breitmeyer's

Breitmeyer's recently had an extremely fine decoration for a coming-out ball. It was one of those old timers where expenses are of secondary consideration and doubly enhanced in value through its position in an art studio filled but not overloaded with fine marbles, draping, chairs and tables, all of very rich design and each one a piece of art. The principal material used was Southern Smilax, Laurel and American Beauty Roses. Two very handsome doorways, encased with frames from old Italian chapels, led into a conservatory in which a beautiful moonlight effect was produced by using green crystals around electric lights. Large Palms and Ferns were used to add to the subdued effect, and several 15-inch Corinthian columns, surrounded by tall slender evergreens, with a marble fount and a string orchestra, completed a genuine Italian moonlight scene. It was, all in all, a complete success and society was in raptures.

FRANK DANZER.

Christmas Retail Trade in New York

Reports of retail florists in the different sections of Greater New York are to the effect that Christmas trade was heavier than heretofore experienced at a similar season. Early on the day preceding the holiday, many supposedly ample stocks laid in were sadly depleted and many would-be purchasers had to be disappointed. It was really and truly a plant Christmas, cut flowers figuring very little in the volume of sales made.

The windows of the florists on the prominent thoroughfares presented a brilliant array of flowering plants in

all manner of combinations; very few cut flowers were to be seen. While there was but little which might be termed "new" in the line of plants displayed, still, there were one or two innovations which at least presented the feature of change. Some of the smaller potted plants were shown with the pots completely covered with ribbon, instead of the usual pot cover. The ends of the ribbon were finished in a bow, and while the effect was handsome, such decorations in careless hands would soon be damaged, and the fashion, therefore, must be short-lived.

There was the usual array of basket and hamper combinations. Baskets in what are termed "Arts and Crafts" styles were exceedingly prominent, and some of the designs were most handsome and covered a wide range of ideas, many of them in the lighter "Mission" style. Twig hampers and baskets were again popular, as well as those of raffia and willow.

Plants of Orchids, in their frame carriers, and well flowered, were noticeable in some of the better stores. Cattleya Trianae was most gorgeous combined with liberal ribbon effects. *Cypripedium insignis* seemed to be a popular flowering plant, and numbers of them, profusely flowered, were seen in the florists' windows on Broadway and Fifth ave. Tastily decorated with ribbons, they appealed at once to an artistic taste and proved to be good sellers.

Ottahite Oranges were more than usually in evidence this year and, trimmed with yellow ribbons, appeared to strike the popular fancy. *Begonia Gloire de Lorraine* was on view everywhere, some very handsome plants adding much to the general window displays and selling well. There were quantities of poorly grown plants hanging fire, much to the disgust of florists who loaded up with them. There was more of this inferior stock seen than has been the case in previous years and retailers realize that unless of good quality *Begonia Gloire de Lorraine* is not worth handling. Camellias in flower were seen quite largely, but did not appear to meet with ready sale.

Some day, not far off, either, all Retail florists will appreciate the advantages of this Department. But why wait? Break the ice now, with the beginning of 1910, and write us freely. Correspondence solicited. Good photos wanted.

Florists in good standing throughout the country can avail themselves of the advertisers' offers in this Department and accept, without hesitation, orders from their local customers, transmit same to an advertiser in these columns, and thus avail themselves of the opportunities for extension of trade which are open to all. Let your customers know you fill orders by telegraph to any part of the country.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail firms advertising under this heading are all considered by the publishers of The Florists' Exchange as being responsible, and will accept and fill orders for Flowers, Plants and Floral Designs for Steamers, Orders, departing Trains, or any given point within their reach, forwarded them by mail, telegraph or telephone, in the respective districts to which their trade extends, the usual commission being allowed. While no guarantee is expressed or implied by this paper as to the satisfactory fulfillment of orders sent to parties whose names appear in this Directory, we will state that only concerns of known good standing will be admitted in this Department. The use of Arnold's Telegraph Code No. 16, a copy of which is placed in the hands of every advertiser, will greatly facilitate this interchange of business.

Eyres ALBANY, N. Y.
11 North Pearl Street

Cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

John Brattmeyer's Sons DETROIT, MICH.
Broadway and Gratiot Ave.

We cover all MICHIGAN points and large sections of OHIO, INDIANA and CANADA. Retail orders placed with us will receive careful attention.

Ericas were again a good thing, and enough plants could hardly be secured. Trimmed with bright red ribbons, they were recognized as ideal Christmas plants. Ardisias again enjoyed a good run and figured but little in the left overs. Poinsettias were handled in great numbers and on the whole were a good thing, particularly in the various combinations in which they were used. Jerusalem Cherries sold well and were very handsome both alone and used in hamper or box effects. Something of a novelty were pots of Carnations in flower, and the offerings in this line were soon snapped up. Azaleas again met an enormous demand and cleaned up wonderfully well.

Seldom before have Ferns been in such demand as they were at this Christmas. The Boston and its many sports were sold by thousands. Some of the retailers used them in combination with Winterberries and Pussy Willows, and the effects thus obtained made many a sale. Dracenas and Asparagus and smaller Ferns in combinations were also good sellers.

Reports from plant growers in regard to the Christmas business are all satisfactory, most all growers having been completely cleaned out of stock.

Some Boston Retailers

The new store of Julius Zinn on Park st., right in the center of the wholesale flower district, is a gem. The decorations in green give an excellent setting and the large show window makes it one of the most attractive stores in town.

Thos. F. Galvin's, on Tremont st., is always a busy corner. It is located on a much traveled thoroughfare and his windows are always an attraction.

Henry R. Comley on Park st. has always something attractive and his store is one of those that make a specialty of many of the rarer plants and flowers.

J. Newman & Sons, at 24 Tremont st., is one of the oldest established retail stores in town, and enjoys a fine established trade.

Bromfield st. is known as one of Boston's busy cross streets and there is no more busy place to be found than the store of Penn, with an always attractive window. On entering, the fine white decorations, with always a large lot of Killarney and other Roses greet the eye.

Among the Back Bay stores, one of the latest is that of Carbone, on Boylston st. This is now one of the leading streets of the new shopping district and the arrangements of this store are charming, without a doubt. Here, too, may be found some rare plants and flowers that will be always pleasing to the person on the outlook for something out of the ordinary.

McMulklin's store is always attractive, located as it is opposite the Public Gardens, and kept up by a window that has ever changing attractions, and where color schemes are used with excellent effects.

W. E. Doyle is one of Boston's oldest florists and his store on Boylston st. is one of the leaders. The conservatory at the back makes it rather out of the ordinary, and is something rarely met with in the more recently established stores.

Hoffman is located right on Boston's hon ton thoroughfare, Commonwealth ave., corner of Massachusetts ave. He has at all times a large selection of plants and flowers and keeps his corner one of the most attractive in town.

Growing Jasmine for Perfumery

The cultivation of Jasmine for perfumery purposes in the district of Grasse, France, is assuming large proportions every year. The 300,000 pounds picked in 1900 has increased to about 1,200,000 pounds at the present writing; the plantations in 1906 alone increasing to more than 1,000,000 sq. ft. of ground.

Two kinds of Jasmine are grown at Grasse, the common or white Jasmine, which is used as a grafting stock, and the Spanish Jasmine, the flowers of which are larger and more strongly perfumed, with a red stripe in the corolla. Jasmine requires much sun; in favorable surroundings it may be found at an altitude of 1200 to 1600 ft. at Grasse.

The harvesting of the flowers begins toward the end of August, and lasts until the third week of October. The women of the region do the picking, beginning at six in the morning, or sooner if the dew has disappeared; good workers can pick eight to ten pounds in the forenoon, receiving half a franc, or 10 cents per kilo (2.2 lbs.). If the flowers are still a little damp with dew they are spread out on cloths in the fields to dry; they are then carried in large flat baskets, in quantities of 15 to 20 kilos, to the perfumery works.

The flower of the Jasmine is sold by the kilogram (2.2 lbs.) at a price fixed each year, and that is also subject to the season, for the flowers picked after the end of September, when the heat is abating, lose some of their perfume.

In 1906, the price was 4 francs (80 cents) per kilo; in 1907 it slumped to 2.45 francs, and in 1908 the flowers brought even less, doubtless on account of overproduction. Many growers make a definite agreement with the manufacturers for a period of six years, the price being generally fixed at 2 francs per kilo, for a predetermined quantity. It is estimated that 1000 sq. ft. of ground will produce 40 to 50 kilos of flowers. A well-kept plantation of Jasmine will produce a crop for a period of 14 to 15 years.—Revue de l'Horticulture Belge.

Chrysanthemum Baby

The Chrysanthemum bearing the above name is probably the smallest double-flowered variety in existence, being, in point of fact, a miniature-flowered Pom-pom of a golden-yellow color, that appears to attract the attention of a large number because of its diminutive size. The flower heads individually are not so large as an ordinary breeches button, and a dozen or two of these clustering—though not touching—on the tips of well-flowered branches or sprays, are very attractive. The variety is small in all its parts, leaves, stems, and florets, the latter not more than half an inch in length. The plant is of dwarf and bushy habit, and those who cultivate the curiosities of the Chrysanthemum world should find it of considerable interest. As exhibited recently, the variety was quite an attraction, even among a large number of other varieties of undoubted excellence.—E. J. in Gardening Illustrated.

"FLORISTS' FAVORITE" CUT FLOWER BOXES

Very Neat Manila Boxes—White Inside

JUST PUBLISHED

Webster's NEW INTERNATIONAL Dictionary, (G. & C. Merriam Co., Springfield, Mass.) surpasses the old International as much as that book exceeded its predecessor. Editor in Chief, Dr. W. T. Harris, former U. S. Com. of Education. The definitions have been re-arranged and amplified. The number of terms defined has been more than doubled. The Etymology, synonyms, pronunciation, have received unsparing scholarly labor. The language of English literature for over seven centuries, the terminology of the arts and sciences, and the every-day speech of street, shop, and household, are presented with fullness and clearness. In size of vocabulary, in richness of general information, and in convenience of consultation, the book sets a new mark in lexicography.

Retail Notes

MARYSVILLE, CAL.—J. W. Evans of Sacramento is to open a retail florist store in the Ellis block. A nursery, with greenhouses, is contemplated in the near future.

BETHLEHEM, PA.—Haines' new florist store, corner Broad and New sts., was opened on Dec. 21 and was visited by a large number of people.

KANKAKEE, ILL.—D. F. Ingham opened a store in the Chritzman Building on Dec. 17, to conduct a business in cut flowers and potted plants.

TRENTON, N. J.—Chester A. Van Cleef, 19 years old, has opened a retail florist store at 10 West State st. Mr. Van Cleef has been in the employ of several of the best known florists in this vicinity and has gained much knowledge of flowers.

JACKSONVILLE, FLA.—Owing to the tremendous growth of the business of the Jacksonville Floral Co., another store was leased at 123 Laura st., to accommodate stock for the holidays.

Rochester, N. Y.

That the Christmas business for 1909 was fully equal to previous years is generally conceded by the local trade; and from opinions expressed by one of the dealers it will, no doubt, after matters are straightened out, prove to show a marked increase in the volume of business in comparison with previous years.

Owing to the dark, cloudy weather prevailing previous to Christmas, and the brisk demand for cut stock right up to the time of the largest demand, the stock received was in good condition and fresh, the pernicious habit of salting stock not having been resorted to, much to the satisfaction of all concerned and particularly to the flower buying public who, as everybody knows, are getting very tired of paying from 50 to 100 per cent. advance for stale flowers at Christmas after buying superior stock at other times for a reasonable price. It is devoutly to be wished that the conditions prevailing this year will continue in the future, and that the man who hereafter picks his flowers will be a back number.

Carnations were in good demand, bringing from 5c. to 6c., red bringing 8c. and 10c. Roses brought from 12c. to 15c.; some fancy stock bringing 20c. and 25c. were in good demand, especially Richmond and Pink Killarney. White Killarney did not move to any extent. Violets cleaned up well at \$1.50. Valley brought \$2.50 to \$4.

Transportation facilities, it may be said, were never so bad at any previous Christmas. No Violets reached Rochester till 8 p.m. Christmas Eve, consequently much business was lost; other shipments from the East were equally delayed, some not arriving until Saturday and Sunday. Outgoing shipments were never so badly handled. Shipments arrived too late for sale and many were frozen so badly as to be unfit for use, from being carelessly left for hours in the severe cold. It seems that much of this inconvenience could be remedied by the S. A. F. getting together with the transportation companies. The evil could probably not be remedied altogether, but much of it could be done away with.

Prospects for New Year's are bright for a good cut flower trade, and stock will not be over plentiful if the present cold weather continues.
 H. B. S.

Verbenas! Verbenas! Verbenas!

THE SEASON IS NOW OPEN

SPECIAL OFFER

We will give one copy Plant Culture and The Florist's Exchange two years, all for \$3.00.

Plant Culture

NEW, THOROUGHLY REVISED EDITION. JUST PUBLISHED

By Geo. W. Oliver, Propagator to the Bureau of Plant Industry, U. S. Department of Agriculture

Printed on enamelled paper and illustrated with one hundred plates and engravings. Strongly bound, 12 mo., cloth. By mail postpaid, \$1.50

A WORKING handbook of every day practice for the Florist and Gardener, and those who intend to grow plants and flowers, in the greenhouse or garden, as a means of obtaining a livelihood. Each and every article is written in concise, simple language, and embodies wholly and solely the experience of the writer.

The plants dealt with comprise those which are commercially handled by Florists, Gardeners and Nurserymen, and include Florists' Flowers, Stove and Greenhouse Plants, Hardy Herbaceous Plants, Annuals, Shrubs, Hardy and Tender Vines and a chapter of General Directions, covering Propagation, Seeds, Grafting, Hybridization, etc.

This reliable cultural work has been gotten up for use, not ornament; therefore the price has been fixed at a figure within the reach of all. It contains more real practical information for those for whom it is intended than is found in much more pretentious works.

Send for sample pages, free.

Offices, 2 to 8 Duane Street, N. Y. Address P. O. Box 1697, New York City

G. & F. Club of Boston

The regular December meeting of the Club was held in Horticultural Hall on Tuesday evening, with an attendance of over a hundred members. It was announced that the annual banquet would be held January 27, which is a more suitable time of the year than April, when it has formerly been held. Four new members were elected. On the exhibition tables was a fine collection of Geraniums from W. N. Craig, in speaking of which that gentleman said that the variety Emile Zola was the most satisfactory of all to grow. Peter Fisher exhibited a vase of Carnation May Day which was awarded a report of merit. Duncan Finlayson exhibited a lot of Calanthes, including the varieties rubra maculata, superba, vitata lutea, maculata, Sandhurstiana and Veitchii. He was awarded a report of merit for superior cultivation of these flowers. E. Holmes of the Montrose Greenhouses exhibited a collection of Roses, including some 13 varieties. Prof. White of the Mass. Agricultural College gave a brief outline of the horticultural work at the College and invited the Club to hold another field day there. The matter of the laws of the State whereby the towns were assessing growers for their plants was the cause of considerable discussion by Messrs. Butterworth, Patten, Palmer and others, and it is likely that some action will be taken, as it seems as unfair to tax a florist for the plants in his greenhouses as it would be to tax a farmer for his crops out of doors.

As reported in our last issue, the following officers were elected to serve for 1910: President, John W. Duncan; Vice-president, Peter M. Miller; Secretary, W. N. Craig; Treasurer, Edward Hatch; executive committee, J. P. A. Guerineau, W. E. Fischer, Thos. Pegler, and H. E. Fiske. H. U. B.

Massachusetts Horticultural Society

The Mass. Hort. Society announces its annual course of free lectures on topics of horticultural interest, for the season of 1910. The lectures will be held at Horticultural Hall, Boston, on Saturday mornings at eleven o'clock.

- The program is as follows:
- Jan. 8.—Plant Hunting in the Heart of China. Stereopticon Illustrations.—By E. H. Wilson, Arnold Arboretum, Jamaica Plain.
 - Jan. 15.—The Use of Water in Commercial Gardening.—By H. M. Howard, West Newton.
 - Jan. 22.—A Study of Continental Landscape Gardening. Stereopticon Illustrations.—By Albert D. Taylor, M. S. R., Ithaca, N. Y.
 - Jan. 29.—Apple Growing in New England as a Business. Stereopticon Illustrations.—By E. Cyrus Miller, Haverdenville.
 - Feb. 5.—How New Races of Plants arise through Hybridization.—By Ezra Brainerd, Middlebury, Vt.
 - Feb. 12.—Some Practical Results of Investigations of Diseases of Trees on Structural Timber. Stereopticon Illustrations.—By Dr. Hermann von Schrenk, St. Louis, Mo. (The John Lewis Russell Lecture).
 - Feb. 19.—The New Agriculture and Its Significance to New England.—By G. C. Sevey, Editor New England Homestead, Springfield.
 - Feb. 26.—Exhibition of Plants, Flowers, Fruits and Vegetables.
 - March 5.—Horticulture as a Profession for Women.—By Miss Laura Blanchard Dawson, Jamaica Plain.
 - March 12.—Lilies in the Home Garden. Stereopticon Illustrations.—By E. S. Miller, Wading River, N. Y.
 - March 19.—The Dietetic Value of Fruit.—By Prof. Wm. R. Lazenby, State University, Columbus, O.
- After the reading of papers opportunity will be afforded for full discussion of the subjects.

All are freely and cordially invited to attend.

Wm. P. Rich, Secretary.

New Jersey Floricultural Society

The New Jersey Floricultural Society of Orange, has elected the following officers for the ensuing year: President, Albert F. Larson; vice-president, Dietrick Kindsgrab; secretary, William Reid; treasurer, Walker Gray.

Mr. Larson is head gardener for A. B. Jenkins, of Llewellyn Park, West Orange, while Mr. Kindsgrab occupies a similar position on the estate of William Runkle. Mr. Reid is chief gardener for Sidney M. and Austin Colgate. Mr. Gray is a resident of Maplewood. These officers are prominent as floriculturists in New Jersey, and have won numerous prizes at various flower shows.

Elberon (N. J.) Hort. Society

The Society held a meeting on December 20, President Peter Murray in the chair. The usual business of the Society was attended to. Chas. C. Dewild had three seedling Carnations at the meeting, which scored as follows: White seedling, certificate of culture; red seedling, 73 points; Pink seedling, 76 points. Arthur T. Boddington of New York donated three medals to the Society, gold, silver and bronze, for a competition for points during the season. In the report of the last meeting a misstatement as to the date of the Carnation night was made. It will be held at the second meeting of next month, January 24.

ALEX. FLEMING, Rec. Sec.

Newport (R. I.) Horticultural Soc.

A regular meeting of the Society was held on Tuesday evening, December 28, with President James Robertson in the chair. Two candidates were presented by the executive committee for membership, and they were elected. The committee on banquet reported progress; the date originally set, January 18, has been changed to January 11, so that it will come on the night of a regular meeting. An effort was made to have arrangements changed so that ladies could be invited to the dinner, but the committee could not see their way clear to make the change, much as it was desired, owing to the lack of time. Another time the ladies will be included in the invitations. At the meeting W. E. Marshall of New York and John Beaton, representing R. & J. Farquhar of Boston, were present, the latter speaking on the advantage of the revised tariff in the case of the importation of bulbs, but he failed to see any advantage in case of the proposed parcel post.

A. MacL.

Monmouth Co. (N. J.) Hort. Soc.

The Monmouth Co. Horticultural Society held its regular meeting on Friday evening, December 17. In the absence of our president, Wm. Turner was selected chairman. Peter Murray of Elberon was elected a member of the Society. After the regular business was completed the Society went into the election of officers, with the following result: Wm. Dowlen, president; Geo. Davis, vice-president; H. A. Kittel, secretary; Percy Hicks, financial secretary; N. Butterbach, treasurer. Our new president, after taking the chair, selected his committees for 1910 as follows: Executive committee, Geo. R. Kuhn, Jas. Kennedy, Wm. Turner and W. W. Kennedy; exhibition committee, Wm. Turner, W. W. Kennedy, Geo. Davis, N. Butterbach, H. A. Kittel and Geo. Hale. Our annual dinner will take place somewhere around the middle of January; the dinner committee is as follows: N. Butterbach, chairman, H. A. Kittel, Wm. Turner, W. W. Kennedy, Jos. Rilev, Geo. Hale, R. Applegate, J. R. Hance, P. Hicks and Geo. R. Kuhn. The Society in past years has always taken considerable interest in the annual festival, in fact it is one of our landmarks. All look forward to a pleasant and enjoyable time, and I am prepared to say that the committee will do all in their power to keep up the standard of excellence that has been in vogue in the past.

W. T.

Minnesota State Florists' Assoc.

The regular monthly meeting was held at St. Paul, Tuesday, Dec. 14. There were 25 in attendance and a very interesting time was had. One new member was elected.

Pres. Wirth presented the matter of the guarantee fund for the next National Flower Show, and \$500 was pledged, which amount will be offered by the Association.

Prof. Freeman of the State Agricultural school gave a very interesting and instructive talk on "Fungous Diseases of Plants," which elicited quite a good many questions and a lively discussion.

An entertainment committee was appointed to prepare for the annual ball to be held in Minneapolis.

Mr. Hawkins gave a brief report on the annual meeting of the Iowa State Hort. Society which he attended recently in Des Moines.

Mr. Wirth spoke of the annual meeting of the Minnesota Hort. Society, which met recently in Minneapolis and at which several of the florists read papers.

J. Christensen, supt. of Holm & Olson's greenhouses, exhibited some very fine Begonia Gloire de Lorraine and some promising sports therefrom named Gertrude and Agathe, also choice Cyclamen and Polinsetta plants. The Donaldson Co. exhibited Cyclamen. The Hiawatha Gardens had Begonias and Cyclamens. Will Bros. showed some very fine Carnations, Beacon, Rose Pink Enchantress and White Enchantress.

The next meeting will be held Jan. 17. VERITAS.

AZALEAS IN BLOOM

AZALEA Indica, in bloom, for New Year, Mme. Petrich, Simon Mardner, Deutsche Perle, Vervaeana, 75c., \$1.00, \$1.25.

Other varieties for Easter: Bernard Andrea alba and Niobe (double white); have only extra large plants of this variety, 16, 18, 20, 22 in. \$1.00, \$1.60, to \$2.00 each. Mme. Van der Cruyssen, Simon Mardner, Vervaeana, Deutsche Perle, Prof. Wolters, Helene Tellman, Apollo, Empress of India, Schreveriann and other well-known American varieties. Price, 50c., 75c., \$1.00, \$1.25, \$1.50 to \$2.00 each. We don't carry any cheap Azaleas, only first-class.

COCOS Weddelliana, 3-in., 12 to 15 in. high, 15c. to 18c.
ARECA lutescens, 5-in., 35c.
LATANIA Borbonica, 4-in., 20c.

WE ARE NOW BOOKING ORDERS FOR ADMIRATION

One of the most promising Carnations we have seen.

Advance orders indicate that the sale of this variety will be heavy and also prove that level-headed Carnation growers realize the real worth of **Admiration**.

This is a strong-growing variety, with excellent stem, calyx and form of bloom. The color is the point above all most noticeable, and description of this cannot do it justice. It is a clear, lively, light pink which holds well and is always even, through the bright days as well as the dull. Flower is large and is an excellent keeper and shipper.

Place your order now and get early delivery. Our stock is healthy throughout. \$12.00 per hundred. \$100.00 per thousand.

SHASTA

"SEEING IS BELIEVING"

THEREFORE we ask everyone interested in carnations to come and see our new **white carnation, SHASTA**, growing. Plants benched early in August are in full crop now, carrying from 10 to 20 buds per plant. Have been cutting good blooms since September 15th. As a money-making carnation it has no equal. And the quality is right too. Scored 85 points at Indianapolis, April 11th, 1908; 85 points, Indianapolis, January 12th, 1909; 89 points A. C. S. at Indianapolis, January 27-28, 1909. Travelled to Boston, Mass., and scored 87 points in February, 1909. 89 points at Springfield, Ill., in March, 1909. Never scored less than 85 points. You can see it growing at either Indianapolis or Tewksbury. Always ready for inspection.

We are booking orders now for January delivery at
\$12.00 per 100, \$100.00 per 1000.

The Christmas Market

Christmas trade was hardly up to expectations with most of the dealers; better results were looked for as the times seemed to be improving the last few months. The uncertainty of the holiday trade is becoming worse each year; high prices seem to be the main cause, and the poor quality of stock some people get for the prices paid is an effectual reason why they quit buying flowers at the holidays.

In the cut flower trade there was enough stock for the demand and some over, and plants were abundant, not selling as well as was expected; a good few were left over. The quality of cut flowers was fair, but there was evidence of some salted stock in Carnations which were handled and sold, and certainly did not give great satisfaction to the people who received them.

Roses were not in such great demand; prices at retail from \$5 per doz. up for general sorts; American Beauty retailed from \$12 up per doz. Carnations were plentiful and the main blooms handled, selling from 6c. up, wholesale, retailing from \$1.50 up per doz. Poinsettias sold well in limited quantities, the best brought \$1 each, retail. Violets were sold at \$2 per 50, retail, and not in such great demand as usual. Good Paper White Narcissus sold readily at \$1 per doz., and cost from 2c. to 4c.

Roman Hyacinths and Valley were little asked for. A few 'Mums were to be seen of poor quality.

In plants trade was fair; Poinsettias, Azaleas, Cyclamens, Lorraine Begonias, Primulas, Crotons and Ferns were most called for. Pans of Poinsettias were about the best sellers and Lorraine Begonias about the poorest. The latter plant is less wanted each year; it is hard to handle safely, is easily affected by cold, and very few people can keep the plants in fair condition when they receive them.

Cyclamen is another plant which is losing prestige with the customers. Tulips in pans sold well; 7 bulbs to a plant brought \$1, making this a profitable plant to handle for the grower and dealer.

The Christmas greens market was over done this year, which was rather looked for, as last year there was a scarcity and high prices were paid; this induced many to enter the field, particularly in Christmas trees, and the consequence was an overstocked market with carloads left unsold. Other greens, such as Laurel, Ground Pine and Boxwood wreathing sold well, Holly, loose, and wreaths, sold well as usual; Holly is the best selling green on the market and the most profitable if of good quality. Sheet Moss was in fair demand; the supply was good. Mistletoe was mighty scarce, an unusual occurrence.

It has been quite a few years since we have had such a cold spell of wintry weather at Christmas, and for the past few weeks or more, the thermometer was not above the freezing point except for a day or two at the utmost. It required much work for the florist and grower to handle plants and cut blooms properly, to keep them from being frozen, and a good many were hurt enough, if not frozen, as to be unsalable. The cold weather had undoubtedly some effect on trade in plants and cut flowers; particularly noticeable were the few orders for flowers for decorating graves in the cemeteries and not quite so many were used in the churches. Funeral work was a factor after the holidays, several good orders being executed by several of the florists.

Prices after the Christmas holiday still hold up well and will not likely change very much until after New Year's trade is over.

Club Meeting

The next meeting of the Florists' Club, the first one in the new year, takes place Tuesday, Jan. 4, at the Fort Pitt Hotel. The subject will be Roses, and some good blooms will be exhibited. Nomination of officers for the coming year is also in order. All the committees who have charge of the American Carnation Society's meeting, end of January, will report. All those who have promised to contribute to the fund for the entertainment of the American Carnation Society's members should send in the amount of their contribution, without delay, to E. C. Reineman, chairman, 1145 North Negley ave., City, as it is very important for the Finance Committee to know, soon, how much money will be available so that the various committees can make proper arrangement in good time.

E. C. REINEMAN.

CYCLAMEN

Splendens Giganteum Hybrids

The strain which I offer is unsurpassable. A fine lot of well budded plants, 5 colors, including Fimbrilatum, from 4-in. pots, \$15.00; from 5-in. pots, \$20.00 per 100; August Seedlings, twice transplanted from flats, first-class stock, \$3.00 per 100, \$25.00 per 1000.

NEW YORK.—The cut flower business for the Christmas holiday was somewhat disappointing. Immense shipments of all kinds of stock poured in, and early on Friday the results of an over-estimated demand were apparent. Roses and Carnations were the heaviest of arrivals and efforts to secure high prices on these flowers were frustrated by the lack of interest on the part of the retailers.

Weather conditions for the entire week preceding the holiday were well nigh perfect. It was, however, purely a plant Christmas, and as there was but little or no shipping of cut flowers done from the wholesale houses, the local demand was the only outlet for the quantities of flowers received. Very little speculation was indulged in by the retailers, as they sought to profit by experience gained in former years, and only bought such material as was practically ordered. The demand for medium priced goods was strong, but so much of this class was received that a great deal was left over.

American Beauty Roses reached \$1.25 each for top grades, while a larger number went at the dollar mark, which was apparently more general. Plenty of these Roses were on hand, and sales were made to suit all conditions. A mistake was certainly made by the growers in holding back so much material, as considerable of it could have been used to better advantage earlier in the week, when prices equalling those of Friday prevailed. This applies particularly to Tea Roses and Carnations. The quantities of Killarney and My Maryland were beyond all expectations, and prices for these varied according to quality. 25c. for top grades was general, while medium grades ranged from 10c. to 20c. Richmond was popular, some sales reaching 35c., others averaging 20c. A better clean-up was made of this variety than any other. Bride and Bridesmaid were a secondary consideration, the best grades averaging 15c., while medium and smaller grades ranged from 4c. up.

Carnations, except red sorts, were in endless supply, the majority of sales being made near the \$6 mark, notably for Enchantress; sales of selected stock reached \$10. White varieties were very plentiful and moved slowly at \$4, and \$5. Red varieties were sold at from \$8 to \$15, according to quality. Quite a few flowers looked sleepy after being received and these could not be disposed of at any price. A few Chrysanthemums were seen, but no special demand for them was noticeable, \$2 to \$2.50 per doz. was the asking price. Easter Lilies were plentiful and averaged \$12.50 per 100; a few sales were made at \$15. Lily of the Valley moved slowly, and plenty was obtainable at low figures, \$2 to \$5 being the general run of prices.

Cattleyas and other Orchids did not reach as high a figure as was looked for, shipments of them being heavier than the demand called for, 60c. to 75c. was the range of prices for the bulk of arrivals.

Violets moved well, the prevailing figure being \$1.25 per 100. Some special lots of top grade flowers sold for \$1.50. A few shipments arrived slightly frozen. A fairly good clean up was made although late arrivals on Christmas morning were held over.

Mignonette, Daisies, Pansies, etc., helped in the general sales, more for use as mixed flowers than for any individual value.

Callas were not called for and many remained unsold, as they are not Christmas flowers. Narcissus was very plentiful and much stock was left over; receipts were heavier than in any former year, and prices ranged from \$1.50 to \$2.50 per 100. Asparagus and other greenery was also plentiful. A few single Daffodils were seen, as also some

Yellow Prince and Artus Tulips, but they were too short stemmed for real value to be given them. Poinsettias were in good demand and ranged from \$2 to \$4 per doz. Gardenias were a poor feature, and did not realize the prices expected.

Since the holidays, business has been very dull. Cut flowers of all kinds are over-abundant. American Beauty Roses are hard to dispose of at 60c. each, while Tea Roses of all kinds have experienced a fall in price. Good Roses are offered at 8c. to 10c., but as no business is being done they remain unsold. Bride and Bridesmaid are particularly hard to dispose of. Carnations range from \$3 to \$6 for standard grades and plenty are on hand for all purposes. The supply of Orchids of all kinds has over-supplied the demand, and sales of Cattleya Trianae cannot be made at 50c. to 60c., while C. Percivaliana has been sold, in large lots, for less than 25c. each. Cypripediums are held at \$12.50 to \$15 per 100 and the supply is just about equal to retailers' wants. Lily of the Valley is somewhat of a glut; special grades are begging for buyers at \$4 per 100. The outlook for a good business for New Years is not very bright, except perhaps for Violets which are firm at \$1.25. Sweet Peas, Mignonette, Stevia and Narcissus are all in heavy supply. Daffodils and Yellow Tulips are seen more frequently but are not meeting with any special demand at present.

PHILADELPHIA.—The unprecedented snowstorm which arrived on Christmas day seriously interfered with the cut flower business the early part of the week. Arrivals fell off almost completely and but for the amount of stock left over from the holidays considerable trade would have been lost. As it was, the arrival and departure of trains was so uncertain that the express companies refused to accept shipments for delivery, necessitating the dispatching of special messengers to distant points with important orders.

A shortage in all lines existed on Monday, but it was not felt very heavily, owing no doubt to the general falling off of business since the holidays. Prices on some lines remain about the same as at Xmas, although white Roses and Carnations are still very plentiful and hard to dispose of. Market conditions up to Tuesday a.m., at which time a few small shipments by messenger were received, were as follows: American Beauty Roses averaged 60c. for best grades, and were not in heavy demand. Tea Roses of all grades, except white, brought \$4 to \$15, quality determining price. White Roses could be had at practically any figure. Carnations were in fair demand, enough being left over from late holiday receipts for supply, and prices ranged from \$2 to \$5. Enchantress was popular at the \$4 figure. Orchids were plentiful and averaged 60c. each on what few sales were made. Lily of the Valley was not in very heavy demand, and stock was plentiful, prices remaining about \$2 to \$5, according to grade. Easter Lilies were scarce, and more could be disposed of at \$12 to \$15 per 100. Mignonette, Stevia, Pansies and Daffodils were meeting with some popularity where boxes of mixed flowers were wanted, prices varying according to demand. Narcissus was plentiful and was disposed of at \$2 to \$3 per 100, less for larger quantities. Violets were sold out, sales reaching \$1.25 per 100. Yellow Daisies were popular at \$2 to \$3 per 100 blooms.

BOSTON.—Christmas trade was up to expectations and all kinds of flowers sold well. While prices of some flowers may not have been so high as sometimes seen yet they were very satisfactory and the volume of business done was considerably larger than that of last year. As a rule there was plenty of all kinds of flowers, American Beauty

Roses being perhaps most scarce. Richmond Roses were the most popular, the best blooms readily bringing \$4 per doz.; other Roses varied much in price according to stem and flower. Carnations sold well, there was little surplus and prices ran anywhere from \$3 to \$8. Scarlets and other colored flowers were the best sellers. Violets sold well at \$1 and \$1.50; there was no scarcity. There was a good demand for Orchids, and Poinsettias were easily moved, prices ranging from \$3 to \$5 per doz. Lily of the Valley was steady. Business has been fairly good this week considering the fact that we are in the midst of the worst snowstorm seen here for a number of years; indeed, it is a long time since telephonic and telegraphic communication has been so much crippled here as it now is. Of course prices have fallen, but they are still very satisfactory. Carnations readily bring \$3 and \$4, while Roses run from \$3 to \$16 for the better grades. Violets still remain at \$1 and other flowers have dropped proportionately. The Evergreen trade was good and showed a marked improvement over last year.

H. U. B.

CHICAGO.—As is usual after Christmas, all stock has taken a decided drop and prices are almost back to the quotations of two weeks ago. The market is greatly affected by the weather as with such stormy days, snowing almost incessantly since last Friday, the demand for stock is not nearly so great. The Christmas business was about up to the standard. There was no heavy demand, for flowers as was anticipated, which fact is attributed to the severe storms. Roses in all sorts were easily disposed of with the exception of long stemmed American Beauty and Killarney, which dragged on account of price. At this writing extra long stemmed American Beauty are selling at \$6 to \$8 per dozen, while the other grades range all the way down to the shorts at 75c. per doz. Richmond and pink and white Killarney, extra fine, are bringing \$15 per 100, with medium grades, \$7 to \$8 per 100. Bride, Bridesmaid and Perle, extra stock, are bringing \$10 to \$12 per 100 with shorts at \$4 and \$5. Carnations have taken a tumble, and while a few flowers are demanding a somewhat fancy price plenty may be had at as low as \$1.50 per 100, with red stock in the ascendancy.

Lilies have been scarce, and more could have been sold if it were obtainable. Prices are steady at \$2 and \$2.50 per dozen. Lily of the Valley has also been very scarce, and there has been no difficulty in disposing of all on the market at \$4 and \$5 per 100. Sweet Peas are not at all plentiful, and meet with a fair demand.

Orchids of all sorts meet a ready sale, the stock available not being sufficient for the demand. Gardenias also sell readily. Violets were a disappointment for the holiday, not nearly the amount being used as in previous years. Mignonette, Stevia, Paper White Narcissus and Snapdragon are hard to clear.

The trade is looking for a good New Year business, if the weather is fine.

ST. LOUIS.—From all reports this Christmas can be classed as the best in years.

The commission men say they are away ahead of their sales of last year and prices were higher than ever the day before Christmas. First class American Beauty Roses brought \$12 per doz. and were not any too plentiful; shorter stock had a better demand than any of the other grades.

In Roses, Bride, Bridesmaid, Richmond and Killarney, both white and pink, sold well and as high as \$15 to \$20 per 100 for choice; red Roses were very scarce. Carnations held up in price, as high as \$3 per 100 was asked for some of the fancies. These were

plentiful but the price soon dropped as low as \$4 when consignments kept coming in; where the demand was great the supply was greater. Violets sold better and higher than ever; best California brought as high as \$4 per 100; others from \$2.50 to \$3 per 100; doubles from \$3 to \$4 per 100; these sold clean.

Bulbous stock was, as usual, very plentiful. Roman Hyacinths brought \$3; Paper White Narcissus, \$4; Lily of the Valley, \$5; Callas and Harrisii, \$15 to \$25; Poinsettias, \$25 per 100 for the fancies. Smilax and other greens sold well.

All kinds of Christmas greens sold well; bouquet greens were scarce; Holly and Mistletoe were fine and plentiful, at prices as usual.

The demand for blooming plants, such as Cyclamens, Poinsettias, Lorraines, Begonias, Azaleas and other plants, was better than ever. The weather was cold and we had plenty of snow, and plant deliveries needed a lot of wrapping, causing extra work.

For New Year's all flowers will be in plenty, and more will be used, as open houses will need quite a lot for decorating purposes. ST. PATRICK.

New York

A meeting of the board of directors of the New York Cut Flower Exchange will be held at the usual place on January 8, at 3 p.m.

The snow storm which commenced in this city on Christmas morning caused considerable inconvenience to many shippers, and arrivals of cut flowers were unavoidably late on Monday, but orders were filled from late Christmas shipments, enabling the commission men to make a better clean-up on some lines than would have otherwise been possible.

The next meeting of the New York Florists' Club will be held on Monday, Jan. 10, when the new officers will be installed.

For the holidays Thorley opened an annex on Fifth Ave., a few doors below his House of Flowers, which enabled him to take better care of his immense Christmas trade.

Jos. Leikens had an exceptional holiday trade in made-up baskets and decorated pot plants. White Lilac plants were a feature of his offerings.

The Greater New York Florists' Association of Brooklyn, report business as exceptionally good. All kinds of flowers were handled through the holiday season to good advantage.

The attractiveness of the store of Robt. Wilson, Brooklyn, evoked much comment. His display of gilt baskets and hampers presenting many tasty effects, was evidently approved by his customers, judging by the way they went off. Azaleas, Poinsettias in pans, Ericas, Cyclamens, and other popular plants proved winners in the general demand.

Edw. Schmidt of Brooklyn, handled a fine grade of imported English Mistletoe. Church orders proved a prominent part in his Christmas work.

Chas. Weiss, the grower of Melrose, in the Bronx, recently purchased the property, greenhouses and stock of the Weimar Florist Co., Mt. Vernon, N. Y. This acquisition with his nine greenhouses at Melrose will enable Mr. Weiss to better meet the requirements of his large retail trade. Both establishments will be conducted under the firm name of Charles Weiss & Sons.

The Old Reliable Florist Store, Court st., Brooklyn, established in 1869, the proprietors of which now are Fitzsimmons & Rooney, did a good business, in

potted plants Christmas week. During the dull Summer season, extensive improvements were made to the show house, consisting of concrete side walls, stone walks, painting, etc., and the house is now in fine shape. Several Orchids are seen in this show house, which were received direct from South America; they are growing on the original limbs of trees as when found.

Philips Bros. of Newark, N. J., report a Christmas business far beyond their expectations. Funeral orders on Christmas day kept all hands busy until very late.

Potted shrubs in bloom have made their appearance in several of the prominent retail stores. J. H. Small & Sons this week had a fine display of Apple branches in bloom in their windows.

Wm. H. Siebrecht of Astoria is cutting Daffodils and yellow Tulips; and red Tulips have made their appearance at the store of the Growers' Cut Flower Co., although of very short stem.

For the past few days "tree doctors" have been busy with operations on the Buttonwood trees in Old Trinity churchyard, cleaning out dead wood and filling up holes with cement, and using tar oil polities for worm ravages. The work is watched by an admiring throng of people, many of whom have come to look upon the old trees as friends.

Fires

LIMA, O.—At 10 o'clock Monday evening, Dec. 20, fire broke out in the boiler room which is located in the rear of the establishment of E. N. Zeltitz. Owing to the holiday season Mr. Zeltitz had a large stock of Holly and Mistletoe in the storage room, as well as a stock of cut flowers. The flames spread to the storage room, and together with the boiler room, it was gutted. The fire department responded quickly, and within a half hour had the flames under control. The damage done to the plants is estimated at about \$2000, and to the building, \$300. The buildings were covered by insurance and carpenters are at work now rebuilding the damaged portions.

Hampton, Va.

I am sorry to report that we had a disastrous fire on Saturday, Dec. 17, house and contents burned to the ground. All my named and numbered varieties of Gladioli were stored in one ead; we saved a great part of them, but I am sure we have lost a great many varieties; will not know for sure just what are lost, until we can go through them. We have received much sympathy from the people in the vicinity, who have acted in a very noble manner toward us.

Geo. BUCHETT.

Baltimore

Large quantities of cut flowers and plants were disposed of up to Dec. 25, Christmas Day, when the great snow storm broke loose which contributed much toward the slackening of business, as it prevented shoppers from visiting the stores. The phones, however, were working overtime and considerable business was done in that way. Prices were as good as last year.

The Club meeting today, Dec. 27, was poorly attended, mainly on account of the weather, the snow being eight inches in depth and street as well as railroad travel anything but satisfactory. The members expressed their sorrow at the death of W. K. Harris of Philadelphia. Mr. Harris will ever be remembered by his Baltimore friends as the foremost of the old school, with a sterling character unsurpassed by any. The Club adopted resolutions on his death, the same to be forwarded to the Philadelphia Florists' Club and through them to the family. CHAS. L. SEYBOLD.

quality. The two Killarneys and My Maryland were very popular, and brought good prices, 15c. to 25c. for the better grades being received; arrivals of these were very heavy and quite a little stock remained unsold, a condition which later weather conditions proved to be advantageous. Offerings of all kinds of Roses were made on the streets by the fakirs on Christmas morning and good grades were sold at \$1.50 per doz. Bride and Bridesmaid were not called for in any great quantity, especially the latter, and much stock of these remained on hand after the holiday.

Carnations were plentiful, red, of course, being in most demand, prices for which ranged from 8c. to 15c., according to quality. Other colors, except white, were sold at 4c. to 10c., regulated by the condition of flowers. White varieties were hard to dispose of, but what were sold brought \$3 to \$6.

Orchids were heavy enough in demand to keep the supply from becoming congested, and sales of these at \$9 to \$12 per doz. were frequent. Cyripediums were also popular, and were sold at 12½c. to 15c. each, there being ample for all demands. Gardenias were plentiful, and sales ranged from \$3 to \$5 per doz., late shipments, however, remaining unsold.

Violets were in excellent demand, and prices ranged from 50c. to \$1 per bunch for good grades. Several shipments of held-over stock were seen, flowers from these selling at from 25c. to 50c. per bunch.

Poinsettias were very short in supply and more could have been used; sales reached \$5 per doz. for selected blooms, the medium grades ranging from \$2 to \$4 per doz. Sweet Peas, Daffodils, etc., moved well, and sold out clean at good prices. Lily of the Valley was plentiful but not called for very heavily, sales were made at \$3 to \$5 per 100. Easter Lilies were popular, and many were disposed of at \$2 per doz.; the supply was not very heavy, so that a general clean-up was effected. Stevia and greenery of all kinds was disposed of in vast quantities, but the supply was very heavy, resulting in the later shipments being left over, a condition, however, which need cause no anxiety at this time of year. Taken all in all, the cut flower market showed a fair increase in volume of business, especially in cut of town shipments, and this in spite of attempts to belittle the value of cut flowers as a holiday gift.

The majority of shipments showed excellent quality and regrets were freely expressed concerning the keeping of the flowers—this applies to all kinds—in the growers' hands until the last day, as trade was such that flowers were in good demand all the preceding week, but shipments were unnecessarily held until late, causing much delay and trouble to wholesaler and retailer, a condition which must be borne in mind on future occasions. Earlier receipts of goods would have done better and easier conditions.

The complete tie-up of all lines of traffic, resulting from the recent heavy snowstorm was the cause of much inconvenience to the wholesalers. No shipments were received on Monday morning, and but for left-over material from the holidays no business could have been done. The express companies absolutely refused to accept shipments to or from Philadelphia, necessitating the sending of special messengers to distant cities with the cut flower orders.

Henry A. Dreer of Riverton, N. J., is continually receiving orders for Bay and Box trees for Spring delivery, and the quantities of Palms, Ferns, etc., recently seen in their greenhouses indicated preparations for an exceptional holiday business.

Among the retailers general satisfaction is felt concerning the amount of business accomplished at Christmas and the outlook for a good week end demand for New Year's gifts is encouraging.

Robt. Craig Co. reports plant business with it as fully 25 per cent. ahead of last year, and far beyond their expectations. Cyclamens and Begonias are among the good stock left over, but before the week is out, no doubt a general clean-up will be the order.

The bowling games for a turkey, held at the quarters of the Florists' Club of Philadelphia, Horticultural Hall, resulted in a victory for Chas. Zimmerman, who totaled 2042 for the ten games.

The next meeting of the Club will be held Tuesday evening, Jan. 4, at which time a very interesting paper will be read.

Killarney and My Maryland Roses are still "the best ever" with the Leo Niessen Co.

Boston

Christmas trade has proved very satisfactory and considerably in advance of that of last year. While there have been few novelties the sales of plants have been large, and, as usual, Azaleas have on the whole been the leaders. Begonia Gloire de Lorraine, of which there was an excellent lot of plants seen, came next. Ardisias were popular, and Poinsettias when well grown went very satisfactorily. Lots of other plants, well grown, sold well and the business in all sorts of evergreens, wreaths, and Holly has been the best for years.

Boston met with one of the worst snow storms in years on Sunday, and growers, generally, are happy over the fact that it did not come till after the holiday.

Andrew Christensen, the well-known Carnation grower of Stoneham, is confined to his home, suffering from abscessed throat.

George Cartwright has gone to spend a few days in Philadelphia.

Lawrence Flynn has resigned his position with N. F. McCarthy & Co., and is now in the employ of Welch Bros.

Much damage is done to trees and shrubs by the heavy snow storm throughout the city parks. Many fine specimen Thorns and other trees are badly broken down.

H. U. B.

There will be a free exhibition of 700 photographs illustrating the flora, fauna, and scenery of central and western China, at Horticultural Hall, beginning Dec. 27, and lasting two weeks. These photographs are the property of the Arnold Arboretum and were made by Mr. E. H. Wilson, the head of the Arboretum botanical exploration expedition, during the years 1907-08. The collection is of great value and interest, for it contains the first pictures which have been made of the plants of western China, many of which are new to science. In addition to the botanical subjects there are photographs of birds, animals, and objects of architectural and archaeological interest. The exhibition will be open daily from ten to four o'clock.

Milwaukee

"Merry Christmas, and did you have a good business?" That was the query Christmas Day and the day following. Nearly everyone is reported as having enjoyed excellent trade, judging from the heavy stock carried by some of the downtown dealers and the way they cleaned up, business must have been good. As usual, plants at Christmas are cutting, most seriously, into the cut flower business. When Carnations go to \$1.50 per dozen and ordinary Roses \$3 per dozen, the public will buy plants. This was fully demonstrated by the large call for plants in preference to cut flowers, and the slump in cut flowers on the closing days. Reductions and cancellations in advance orders showed the nastiness of the cut flower market. There was an abundance of Carnations on the market and plenty of light colors left over, but good red and bright colors sold well, although top-notch prices somewhat receded. Roses were about equal to demand with a heavy call for red, and pink Killarney, which sold out clean. American Beauty were in heavy demand, especially in the medium grades. Violets were short in demand, but there was plenty of Stevia, Roman Hyacinths and Paper White Narcissus to help out. Some growers held back their stock and sent it in at a stage when it could not be used for shipping, and then wondered why returns did not average outside figures. Shipping trade out of this market was unusually heavy, as the supply is now sufficient to take care of its territory.

Currie Bros., Jas. Fox, McKenny & Co., Baumgarten Floral Co., Wm. Zimmerman and Edlefson-Leideger Co., carried a heavy stock of plants, while the Imperial Floral Co., Jas. Chacona, Louis Maas and Wisconsin Floral Co., specialized cut flowers. These firms did about the bulk of the downtown business, and report good trade. Numerous small dealers outside of the business districts did a good business in plants, but little in cut flowers at the advanced prices.

Holly was plentiful, but much of it was poor; the best sold at \$5 per case, and inferior stock at \$2 to \$3 per case. Bouquet green wreathing was short of demand. Mistletoe was plentiful, but arrived badly frozen.

The weather was cold, hovering around zero right up to Christmas, causing great inconvenience in making deliveries.

Chicago

Christmas day was a disappointment to the trade, as on Friday at noon a severe snow storm set in which kept up all Christmas Day and up to Sunday noon, consequently preventing the anticipated rush at the last moment. The early part of last week business throughout town was so active that Christmas prices went into effect a day or two earlier than expected, but the weather terminating as it did left considerable stock in some lines unsold, the storms being so bad all through the West and Southwest as to make shipping very uncertain, with trains delayed owing to the heavy fall of snow. Carnations were to be seen in vast quantities, every grower, as is usual at this season, holding back so many that the market was glutted. Many of the commission men were selling them on Saturday morning at far below quoted prices, and even with the great reduction many were left on their hands. Roses, as usual, were in active demand and all moved well with the exception of the very long stemmed American Beauty, which were held at such high prices that they were refused in many instances. While many of the wholesalers report a much more profitable business over Christ-

vor by making this statement in
their order: Saw your advt. in
the EXCHANGE.

Detroit
My prediction for a heavy Christmas
trade, a conclusion drawn from the heavy
trade experienced by all last Thanksgiving,
has been fully verified. Everybody
is very well pleased and it seems that all
lines, cut flowers, plants and baskets,
equally shared in the increased demand;
still it is early for a detailed statement
on this score.

Comparing present known facts with
last year, a strong call for all classes of
Roses stands out very favorably as com-
pared with the low demand there was for
them then. The Michigan Cut Flower
Exchange had a large supply of really
very fine Roses and retailers bought them
up eagerly. Carnations, on the other
hand, became a drug but the fault for this
belongs to the grower only. A week or
ten days ago Carnations were extremely
scarce because of the picking going on;
two days before Xmas this stock was
unloaded on the market, some of it in
absolutely unmarketable condition. The
result was an over-supply and a consequent
depressing effect on all other flow-
ers.

Retail prices were good: Roses
brought from \$2 to \$8 per dozen; Am.
Beauty from \$6 to \$18. Carnations, \$1.50
to \$2, with fancy and red, \$2 to \$3.
Violets sold well at \$4 and a few at \$5
per 100. The majority of Poinsettias
sold at \$6 per dozen.

The express service was very poor;
Chicago flowers, which should be de-
livered by 9 a.m., did not reach the flor-
ists before 5 p.m., causing all kinds of
disappointment and delay. The Michi-
gan Cut Flower Exchange had a man
stationed at the depot to help dig out
flower shipments from among carloads of
Christmas freight. Breitmeyers had to
send their auto after midnight Christmas
Eve to the depot for several hundred
Am. Beauty.

Mr. Schroeder's Violets did not reach
their store till Christmas Day in the
afternoon, although they were shipped
on the 23d.

A very unfortunate occurrence was the
blowing out of a boiler section at Mr.
Kales' establishment. Present reports do
not indicate any serious damage but, to
add to the difficulty, he had to wire to
Buffalo for a new section. It is to be
hoped that the weather will not turn
much colder, thereby occasioning further
damage to his stock.

Individual reports from local promi-
nent florists brought forth the following
observations, regarding Christmas trade:
Breitmeyers: The demand made on us
taxed our strength and resources to the
utmost. Orders were placed somewhat
earlier than usual and the receipts of
Dec. 22 and 23 prove this assertion most
conclusively. Plants and baskets sold very
well and high-grade Roses were a close
second. All in all this was the best
Christmas we ever had.

Sullivan's: It is safe to say that this
was the best Christmas Detroit florists
ever had. One may call it a plant Christ-
mas, although the cut flower trade started
very briskly Friday afternoon. Roses
were in much better demand than a year
ago. A good many pickled Carnations
glutted the market, which would have
brought good prices had they been re-
ceived three or five days previous. It
seems too bad that the sermon about pick-
ling flowers should have to be repeated
at every holiday. Out of 1500 deliv-
eries made on Friday about 1000 were
plants.

Schroeder: Plant trade was exceed-
ingly good and started very early; in
fact, we were practically sold out of
plants by Friday morning. Everything
else moved well. Roses were high in
price, but the people got quality equal to
the price.

Brown: Cut flowers sold better than
ever and Roses, which were difficult to
dispose of last year, sold easily this. The
better quality offered may have helped
some.

Taepeke: Everything tip-top; trade
started up at least two days earlier than
usual. Azaleas and Cyclamens were the
favorites. Everything else sold well ex-
cept Violets. FRANK DANZER.

Plant Names, Pronunciation of
This handy little book furnishes a key
of the pronunciation of some 4,360 names
of cultivated plants, genera and species,
and will be found valuable as furnishing a
standard to which to refer by all who de-
sire to be correct when they speak of plants
sent postpaid, on receipt of Fifty cents.

THE FLORISTS' EXCHANGE

WIZARD BRAND MANURES

Dried, screened and packed in bags of 100 lbs. each.

Pulverized Sheep Manure

Pure — Uniform — Reliable.

A strong and quick acting manure, highly recommended for carnations and chrysanthemums.

Shredded Cattle Manure

Easy to handle and apply.

Stronger and better in every way than rough manure. Lasts much longer on the benches. Unequaled for mulching and feeding roses, liquid manuring and mixing with bench and potting soil. Used by all the largest growers.

Ask your supply man or write us for circulars and prices.

The Mastin Automatic White-Wash and Spraying Machine is Reliable, Practical and Durable

The tank is made of galvanized sheet steel, and in brass. The pump is of brass throughout, simple and powerful. The mixing device keeps the contents of the tank well stirred up from start to finish.

When the machine is filled to within six inches of the top, a few strokes of the pump will compress enough air in the tank to produce a continuous mist-like spray for fifteen minutes.

All parts are made to gauge, and may be had for repairs. Ask your dealer about our Extension Hose, Extension Rods, and the Mastin White-wash Nozzle for Bordeaux mixture.

Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

Rye, N. Y.

The Rye Nurseries occupy 38 acres devoted to evergreens and fruit trees. The greenhouses contain nearly 65,000 ft. of glass and are devoted to stock suitable to the large retail trade which the concern enjoys. The nursery was started in 1870 by Chas. Fremd, father of the present owners, S. C. Jenkins and F. D. Fremd. The foreman, Fred Dettmer, points to several novelties which they are introducing and especially the Meteor Geranium, which is proving a good market variety; it is a single red of good color; the concerns grows about 60,000 plants of it, and a large quantity of other bedding stock as well. Considerable design work was furnished by the establishment for the funeral for F. P. Perkins, president of the village of Port Chester, held Dec. 12. A large quantity of Lily of the Valley is forced here for local trade. From 80 to 200 men are employed by the company, 80 men are on the regular pay roll and additional help is added as needed. The nursery is near the trolley line and close to the railroad station.

TRAVERSE CITY, MICH.—The Queen City Floral Co. has erected a new greenhouse, of Foley construction, 150 by 18 ft., and planted it to Carnations.

GREENSVILLE, IND.—A new firm, Dille & Konzelmann, has been formed to engage in the growing of flowers for the wholesale market. For some time Mr. Konzelmann had charge of the Heller Bros.' plant at New Castle, and was later in charge of the growing department of the E. G. Hill Co., Richmond.

Syracuse, N. Y.

Christmas Trade

Christmas trade here was a little above the average and weather conditions were ideal, the ground being covered with snow; the cold snap at the beginning of the week moderated and the delivery of plants was made without much risk. One missed the music of the sleigh bells and the joyous laughter of the little ones—the silent automobile has changed all that.

Holly was plentiful and we were pleased to note that fewer outsiders were handling it. P. H. Ebeling, the seedsman, is the largest dealer in that article and greens and reports trade as very good, but the quality not up to expectations; still he cleaned up everything. Xmas trees were plentiful and mostly grown in this vicinity.

All the florists had very complete stocks of flowering plants. Poinsettias being largely in evidence. P. R. Quinlan's stores and conservatory were a mass of bloom, with immense blocks of Poinsettias, Azaleas, Primulas, Cyclamens, etc.

H. Morris had a very attractive show of Poinsettias, Lilies, Azaleas, Primulas, Peppers, Jerusalem Cherries, etc.

Burt's window is always arranged with great taste, and had a good display of seasonable plants, the Holly wreaths particularly good.

M. E. Hinckle's window was made very interesting with a nice assortment of flowering plants.

Meneilly & Son, as usual, were strong on double Violets, and had a splendid crop of fine flowers; their strain of Primula obconica is particularly good; they have just installed a Spence boiler to heat their new houses.

G. Bartholme's stock was remarkably good and complete; we noticed some very artistic baskets filled with great taste. He had a large block of that beautiful old Begonia incarnata, in splendid shape, in fact the finest I have seen for many a day; why has it been allowed to be a back number, for it is grand for cutting? His Cyclamens were magnificent.

There were no novelties to speak of. Prices for plants were not advanced.

Cut flowers were advanced. Red Carnations were in good demand. Cut Poinsettias sold well. The following prices were generally obtained: Roses—Bride and Bridesmaid, \$2 to \$4 per doz.; Richmond, \$4 to \$6 per doz.; Am. Beauty, \$4 to \$18 per doz.; Carnations, \$1.50 to \$2 per doz.

Valley, \$1; Hyacinths, 50c.; Chrysanthemum (scarce), \$9; Callas, \$4; Stevias, 75c.; Poinsettias, \$6 to \$9; Orchids, \$12 to \$18; Violets, \$3 to \$4 per 100.

Mistletoe was in good demand and sold well. There is a remarkably good trade in plants and cut flowers going on now, as I write. H. Y.

Dec. 27, '09.

DICKINSON, TEX.—Mr. E. E. Stone, Nurseryman, who has been in business here for eight years, was married at Galveston, Dec. 15, to Miss Mabel Bray, also of Denison. Both the contracting parties are of English birth.

Two layers of glass instead of one

What are your losses under single glass sash?

R. Effinger, Jeffersonton, Ky. writes: "I bought 20 Sunlight Sash and have given them a thorough trial. I never lost a plant from frost or freezing, although I never used any covering even during zero weather."

The man who grows to sell should test the Sunlight Double Glass sash.

You will get such remarkable results that you will double your beds.

Pays for itself in a single season

Get the big prices for the early plants.

The Sunlight Sash makes your plants as safe in zero weather as in the open air in May. The dry air between the two layers of glass is better protection than mats or boards. Never needs covering.

You can handle twice the number of beds.

Write for catalog and freight prepaid proposition. Fast freight, safe delivery guaranteed. Order now.

Agents Wanted—The wonderful success of Sunlight Sash makes it a good paying proposition to agents. 75% of our trial orders last year re-ordered this year in lots ranging from 5 to 100 sash. Write for your territory today.

A PRACTICAL HOUSE AT NEW LONDON

It is the central house of the E. S. Harkness range, and is connected to the wing houses on either side, by 11 ft. passage houses.

We show this single house to you just as a suggestion, as a starter for a larger range, that is, provided you can't build big all at once.

A single house like this, 25 feet wide, and divided into two compartments, will grow a quantity of flowers or vegetables, and later you can add houses with least expense.

Having the work room in a central location at the back, makes it handy for the gardener, and just about the most economical arrangement for equal heat distribution. It is our Iron Frame Construction—the kind that lasts—the only kind worth building.

The Florists' Exchange is exclusively a Trade Paper. Prices at which stock is offered in these columns are intended for the Trade only.

Greenwich, Conn.

The principal occupation of this town seems to be gardening, as the numerous large owners of property have excluded all manufacturing plants and nearly all have greenhouses in which a large number of men are employed. Greenwich has an association called the Greenwich Gardeners' Society, which has nearly 30 members and is still growing. Mr. Flattery is president, and hopes to build the society up to a possible 100 members living within a short distance of this village. The meetings are held on the first Wednesday of each month.

Alex. Mead & Son have a fine store at 225 Greenwich ave. and some 35,000 ft. of glass about ten minutes walk from the store. Alex. Mead has been in the trade for 41 years, and is one of the oldest florists in this part of the State. He still retains managership over the business and can be found either at the store or greenhouses at any time. The store was opened within a year ago, and during the past Summer two new houses were erected for Carnation growing. Geo. Carbonche, the Rose grower, has several houses of Roses and one of Violets. The Roses are off crop just at present but show evidence of something good to come shortly. A Burnham boiler has just been installed.

MacMillen & Co. have just opened a new store in the new Carroll and Wooland Building, and have a store which compares favorably with some of the larger stores in other cities from the standpoint of appearance and furnishings. Mr. MacMillen is one of the old-time florists and is a charter member of the S. A. F. Trade is reported as being very good and he is busy preparing for the holiday rush. He came here two years ago from New York City.

Mamaroneck, N. Y.

One of the commercial places here worth visiting is that of the firm of Carrillo & Baldwin who recently purchased the Marshall place known as Hill-top Farm. This well-known firm of Orchid growers took possession a few weeks ago moving here from Secaucus, N. J. At present they have about 10,000 sq. ft. of glass and are building another house 50 by 125 ft. and a packing and storage building 18 by 53 ft. Their collection of commercial Orchids embraces about 15,000 plants. The farm is 15 acres in extent, and the buildings include dwellings, stables, sheds, chicken houses, office and pump house, all of which are of first-class construction, and cost the former owner about \$50,000 to build. The greenhouses are of the U-Bar construction.

John Moll, Weaver st., has at present 5,000 ft. of glass devoted to Carnations, Sweet Peas, Stevia and Narcissus. He also has a small house in which he grows bedding stock to supply the local trade. He is preparing a nursery of four acres, having found it necessary, in order to supply the needs of his landscape work, in which he is kept busy most of the season. Mr. Moll has been in his present location for the past ten years.

Thorwald Jensen of Boston Post rd. has nearly 25,000 ft. of glass, mainly devoted to Carnations, of which he ships large quantities. Several houses are utilized for Smilax and Asparagus. Mr. Jensen forces a quantity of Lilac and has just received a large quantity of stock for this purpose. Considerable Freesia is now being grown and he also has one house of Violets. He was formerly a Violet grower, but in the past few years has almost given them up.

W. H. Daniels, Boston Post rd., has several houses in which he grows Freesia, Forget-me-not, Carnations and a line of Spring stock. He grew a large quantity of Pompon 'Mums, but as the demand was not good this season he will not grow them next year. In former years he had a big demand for these flowers. Considerable retail trade is done at the establishment.

GROW MUSHROOMS

If you do not know how, procure that simple but complete and practical book called "How to Grow Mushrooms." The price is ten cents and it can be secured from this office.

Special rates will be made to the trade who wish to supply their customers.

THE FLORISTS' EXCHANGE
2 to 8 DUANE ST., NEW YORK

A Peep Into One of Our Greenhouses

Outside, the mercury stood at 10 below when this picture was taken. Inside, butter beans were flourishing on the middle bench; tomatoes ripe on the left-hand one, and over in the corner a little arbor of Cucumber vines was laden with "cukes" over a foot long—in the next compartment were yellow, pink and white roses.

There certainly is an immense satisfaction in having a greenhouse—but be sure to have the right kind.

U-Bar houses, because of their superior construction, are more attractive, grow better flowers, and are freest from repairs. The catalogue fully explains it all. Send for it.

Coming Exhibitions

Boston, Mass., May 26-30, 1910.—Great Exhibition of Orchids and other plants, by the Massachusetts Horticultural Society. Secretary, William P. Rich.

Denver, Col., January 3-8, 1910.—Colorado National Apple Exposition in the Auditorium. Secretary, Clinton Lawrence Oliver, P. O. Box 1501, Denver.

New York, March 16-18, 1910.—Exhibition of The American Rose Society, at the American Museum of Natural History, 77th st. and Central Park West. Secretary, Benjamin Hammond, Fishkill-on-Hudson, N. Y.

Pittsburg, Pa., January 26-27, 1910.—Exhibition of the American Carnation Society, Secretary, A. F. J. Bauer, Indianapolis, Ind.

Albany, N. Y.

Christmas sales this year among the local florists has been up to the standard of previous years, cut flowers and evergreens finding a ready sale and bringing good prices with stock plentiful. Holly was in great demand here, every florist in the city being cleaned completely out before Christmas eve.

Funeral work has been active the past week, all being kept busy, as there have been a number of deaths among the most prominent citizens.

At the regular monthly meeting of the Albany Florists' Club it was decided to hold the regular annual banquet on the evening of Jan. 13, at Stanwix Hall. Preparations are being made for one hundred plates, and the event promises a great time among the florists. The next regular meeting of the Club will be held at their new rooms, first Thursday in January, which they have leased for the coming year at 75 State st., at which time final preparations will be made for the coming banquet. The installation of the new officers for the year 1910 will also take place at that time. W. C. K.

Schenectady, N. Y.

Signs of returning prosperity are beginning to appear here in the local flower stores. Most of the florists have reported better Christmas trade than last year. Potted plants, of which there was a large variety, took well, and cut flowers were in good demand, the prices on some of the latter being lower than last season. Weather conditions were also favorable and made deliveries easy of accomplishment. Only a few delays in express shipments were reported.

Funeral work has been quite a part of the December business, and a few weddings have also added their share. New Year and "coming out" parties will also help the last week of the month, which is sometimes dull after Christmas.

Many are interested in the skating rink which J. W. Grupe has opened in connection with his greenhouses. It is a new venture here in town and seems to be a paying investment. Mr. Grupe says he is very much pleased with it and reports a good holiday patronage, not only in the rink but also at the greenhouses.

Chas. Limmer made a short business trip on Dec. 6, visiting A. N. Pierson's place in Cromwell, Conn., some of the Rutherford, N. J. growers, and also a few New York houses. B.

Prices Advertised in these Columns are for THE TRADE ONLY

The Burnham GRATES

Grates are ridged on top—double trussed underneath, so that they smash the clinkers and not the grate. They dump to the front, which makes ash removal easy.

THINK THIS OVER

OUR factory has turned out more cypress greenhouses than any other factory in America. We have furnished the largest range in the world and the finest commercial plant in existence to-day. For forty years we have been in business. Greenhouses have been supplied to every State in the Union, to Canada and Mexico and to Europe. . . . There are more commercial greenhouses in the U. S. of our manufacture than of any other firm in existence. You can buy the house all complete from us, or we'll furnish any part of it. . . .

THE IRON FRAME OF OUR SEMI-IRON HOUSE

ALL our construction moves have been continually towards reducing the wooden members or substituting them entirely with iron.

Now take that Semi-Iron House of ours—it practically has a Complete Iron Frame. The side posts are of guaranteed wrought bar iron, with our Patented Galvanized Eave Plate. The roof between the eaves is supported by our patented Clamp Pipe Frame.

The Purlins are of 1½ inch pipe, strongly fastened to the bars by metal binders, and clamped to the pipe columns by Clamp Column Fittings.

The Giant Arch is a support of great lightness, but has tremendous strength, and is made by clamping together the purlins, columns and cross ties.

All columns are set in adjustable cast iron foot pieces.

The sash bars are firmly anchored to the eave plate by our Patent Sash Bar Clasps, and each pair of opposite bars on either side of the ridge, in addition to being nailed, is bound to it by the Ridge-Holdfast.

So you see the entire frame is of iron, and the only wooden members that go into the completed superstructure are the bars, ridge and sash.

Now when you compare estimates—ours with others—compare item for item—actually what is specified in black and white.

When it comes to deciding, also bear in mind that L. & B. have a reputation from Maine to California for doing everything they do with the greatest care and thoroughness. It costs to do things right in the first place, but it is a great deal cheaper in the end.

Don't think of placing your order until carefully sizing up our constructions and honestly comparing prizes and quality.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXIX. NO. 2

NEW YORK AND CHICAGO, JANUARY 8, 1910

One Dollar Per Year

SELECT FERNS

For Fine Store Trade

We offer a grand lot of exceptionally well-grown plants of the different varieties of

NEPHROLEPIS

which will be found one of the best-selling and most profitable plants that florists can handle. Our stock is in unusually fine shape, and we will guarantee it will please the most exacting, as it is exceptionally good value at the prices quoted.

Improved Elegantissima. The finest of all this type. It was introduced by us in 1905. This form of *Elegantissima* has been greatly improved, and shows no tendency to revert to the Boston, making it the most valuable fern of this type.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8-in., \$12.00 to \$18.00 per dozen—according to size.

Superbissima. Introduced by us in 1908. A very unique and distinct novelty. Its distinguishing characteristics are its dark green foliage and dense growth. Fronds are very heavily imbricated, making them very dense and compact.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8 in., \$12.00 to \$18.00 per dozen—according to size.

Bostoniensis, Piersoni, Whitmani, Scottii—Extra fine plants, 6-in. pots, \$6.00 per dozen; 8-in. pane, \$12.00 per dozen.

Our Catalogue for 1910 is out and we wish to call attention to the many good things offered therein. As usual, we are making a specialty of **grafted and own-root** Roses. We have arranged to graft 350,000 Rose plants this year. We call special attention to the following:

WHITE KILLARNEY (Waban Strain)

Grafted.....	\$2.00 per doz.	\$15.00 per 100	\$120.00 per 1000
Own-Root.....	1.50 "	8.00 "	75.00 "

KILLARNEY

Grafted.....	\$2.00 per doz.	\$15.00 per 100	\$120.00 per 1000
Own-Root.....	1.00 "	5.00 "	45.00 "

MY MARYLAND

Grafted.....	\$2.00 per doz.	\$15.00 per 100	\$120.00 per 1000
Own-Root.....	1.00 "	6.00 "	50.00 "

RICHMOND, KAISERIN, BRIDES and 'MAIDS

Grafted.....	\$2.00 per doz.	\$15.00 per 100	\$120.00 per 1000
Own-Root.....	1.00 "	5.00 "	45.00 "

We offer over thirty varieties of Roses and refer you to our catalogue for the complete list. If your name is not on our list, kindly drop us a postal card and we will be glad to mail you a copy.

Please mention the Exchange when writing.

GERANIUMS

Our NEW Illustrated Descriptive Catalogue will be ready for distribution January 15th. It will be the handsomest and most complete Geranium catalogue ever issued, and is free to the trade.

We are revising our mailing list and would suggest that if you are interested you send us your name on a postal card. We claim to have the largest and most complete collection in the country, and an immense stock for immediate shipment from 2-in. pots of good standard sorts, at \$2.00 per 100, \$18.50 per 1000 and up to 50 cts. each for New Varieties.

We have a splendid stock, in 2-in. pots, of the following at \$2.00 per 100:

DOUBLE LOBELIA, Kathleen Mallard; ALYSSUM, Giant and Dwarf; LEMON VERBENAS; FUCHSIAS, 6 Varieties; COLEUS, Verschaffeltii and Golden Bedder; LANTANAS, 8 varieties; IVY LEAVED GERANIUMS, 6 Varieties; SCENTED GERANIUMS.

DOUBLE PETUNIAS, mixed colors, \$3.00 per 100.

CANNA ROOTS, home grown, 1,000,000, good strong division, at \$18.50 per 1000. King Humbert, \$6.00 per 100, \$50.00 per 1,000.

Dreer's Double Petunias

Our DOUBLE PETUNIAS, for more than half a century, have been the acknowledged standard. The strain this season is equal in high quality to its predecessors, and is well known to the trade.

We offer fifteen distinct varieties, in strong 3-in. pots, which will quickly furnish an abundance of cuttings.

Strong 3-inch pots, 75 cts. per doz., \$6.00 per 100. The set of 15 for \$1.00.

SEED OF OUR Superb Strain of Fringed Petunias

DOUBLE, 75 cts. per 500 seeds, \$1.50 per 1000 Seeds.

SINGLE, 50 cts. per trade pkt., \$1.00 per 1-16 oz., \$1.50 per 1-8 oz.

OUR QUARTERLY WHOLESALE PRICE LIST, issued January 1st., offers a full line of seasonable Plants, Seeds and Bulbs.

American Seed Trade Association

A special meeting of the Executive Committee of the American Seed Trade Association, called by President J. C. Robinson, was held at Young's Hotel, Boston, Mass., December 27, 28 and 29 last. It was, perhaps, the best attended meeting that has ever been held by this important Association and the interest manifested in the proceedings must have been gratifying to the officers.

There were present at these sessions, not only all the officers and directors of the above Association but also the execu-

tive committee of the National Association of Official Seed Analysts.

A large part of the work of these meetings were the conferences held with the National Association of Seed Analysts. The special committee which conferred with the Seed Analysts consisted of Chas. N. Page, Des Moines, Ia.; Charles D. Boyles, Chicago, Ill., and M. H. Duryea, New York.

The Wholesale Grass Seed Association was also represented at this meeting by President Albert McCullough of Cincinnati, O., Vice-President M. H. Duryea of New York, and Directors Chas. D.

Boyles, George S. Green, and Charles Dickinson. Many important matters were taken into consideration relative to the handling of grass and clover seeds.

The annual convention of the American Seed Trade Association, it was arranged, will be held at Atlantic City, N. J., with the St. Charles Hotel as official headquarters, on June 21, 1910.

It has already been planned that interesting papers will be delivered at this convention.

The committees on legal affairs and seed legislation also held sessions during this Boston meeting. Among those pres-

ent were the following:

President, J. C. Robinson, Waterloo, Neb.
First Vice-President, M. H. Duryea, New York
Secretary-Treasurer, C. E. Kendel, Cleveland, O.
S. F. Willard, Wethersfield, Conn.
W. S. Woodruff, Orange, Conn.
Alexander Forbes, New York, Ia.
Chas. N. Page, Des Moines, Ia.
George S. Green, Chicago, Ill.
Charles Dickinson, Chicago, Ill.
C. D. Boyles, Chicago, Ill.
W. H. Grenell, Piermont Manor, N. Y.
Chas. H. B. Breck, Boston, Mass.
Kirby B. White, Detroit, Mich.

Albert McCullough, Cincinnati, O.
John Potter, Jr., Boston, Mass.
C. N. Smith, Boston, Mass.
And many others.

American Notes

Preparing for the Spring Season

After the Christmas holidays until pretty well along into January there is always a very quiet period with the seed trade, in so far as retail sales are concerned; of course, wholesale orders continue to be booked in steady volume by the outside salesmen. As usual this lull in store counter trade is being taken advantage of to complete the seed packaging and other advance preparations for the coming Spring season. It is certainly unfortunate that in consequence of the long continued uncertainties regarding seed values, catalogs, as a whole, with the entire trade will average later in distribution than for many years; this will crowd much work into the next few weeks that by this time, customarily, is out of the way, so a very busy January is assured, even if orders are somewhat slow in starting. Regarding the outlook for a satisfactory seed selling season just ahead, the writer has, during the past month, been gathering the opinions of many prominent seedsmen, and the consensus of their judgment is that the largest seed business in our history will be accomplished in 1910.

Concerning Garden Peas

Not in years have our seedsmen been so anxious regarding the future crops of any seed as they are at present with reference to garden Peas. Speaking of the available supplies of garden Peas for next Spring's plantings, the situation is summed up as follows by Messrs. W. Atlee Burpee & Co., and what they so truly say will be voiced by every seedsmen this year: "Peas are scarcer than has ever been known before. Most varieties of Garden Peas were nearly complete failures in America. From our intimate acquaintance with and personal inspections of stocks grown in England (although the crops there were also distressingly short), we have succeeded in making up most of our normal requirements. The prices paid, in most cases, have been double the usual cost of production, so that even with the higher prices quoted this season our margin of profit is less than half what is usually considered necessary and fair. Without a cent of profit (and we have very few cents on Peas this year) we prefer to protect our regular customers in supplying their usual requirements." Such a condition of affairs, as applied to any absolutely necessary garden seed, is had enough even if it were only for one year; but "worse remains behind," what will probably be the outcome of the 1910 crop of garden seed Peas (the seed he sold in 1911)? Of course, a bumper yield of all varieties of seed Peas next Summer would start conditions back a long way toward the normal; but that such will be the case, even allowing that a perfect growing season prevails, is not at all likely, and for the following well known reasons. In the first place, the same Peas that ten years ago yielded a return of 5 to 7 fold in seed to the number of bushels planted, today only return an average of about half that quantity of seed; in other words, to put it tersely, so very unsatisfactory has become of late years seed yields from garden Peas, that growers are experiencing the greatest difficulty—and such conditions are becoming intensified with each succeeding year—to persuade intelligent and careful farmers to take contracts for growing a seed crop that is fast coming to be considered of very uncertain yield. Again, so short have been the yields of garden Peas for seed purposes the last few years, that many growers have been tempted to sell largely of their seed stocks. Is it any wonder in the face of such facts as these, that our seedsmen are much worried regarding the future source of garden Pea seed supplies?

Large-Flowering Cannas

Among Spring bulbs the better varieties of the large-flowering dwarf-growing Cannas will be more popular than ever the coming season. The time is not so very long ago when Cannas were practically unknown, as compared with their present wonderful popularity. The Canna now certainly competes with the Geranium—no bedding plant will do better under any and all conditions. There are too many first quality Cannas nowadays to offer anything but the cream of the list. A dozen fine Canna roots or started plants, which can be sold for \$1, will give the utmost satisfaction to customers and leave

a good profit for the seedsman. Do not overlook a good assortment of the large-flowering Cannas when arranging lists of bulb specialties for the coming season.

New York Seed Trade Notes

The weather the past week has been the most Winterish so far this season; zero temperatures, and our streets blocked with snow from the storm of Christmas Day, which still impedes traffic. Immediate business is very little, but this condition is always expected between the holidays and the starting of a new seed selling year.

The many friends of James J. Comont (with Messrs. James Carter, Dunnett & Beale of London, England), will be glad to learn of his safe arrival home, after a very stormy passage. Mr. Comont writes that their wet weather still continues and prevents getting seed in fit condition to ship, consequently English seed deliveries to our side will be somewhat later than usual.

Several of our seedsmen are receiving quite short deliveries on Radish seed, their growers reporting that owing to some unknown reason the pods did not fill as usual.

S. D. Woodruff & Sons expect an especially active season; their business has increased very largely each year since having a New York headquarters, as they do at 82 and 84 Dey st. For the seed Potato business, of which they make a specialty, they have storage warehouses at Caribon and Monticello, Maine; also at Queens, Long Island; the seed farms are at Orange, Conn.

The trade will be sincerely sorry to learn that the day after Christmas, Charles Loechner of the Yokohama Nursery Company, Ltd., fell on the ice and sustained a broken leg. Mr. Loechner is in the Norwegian Hospital at Brooklyn. While Mr. Loechner is in the hospital, Miss Mills will be in charge at 31 Barclay st.

L. W. Wheeler, formerly of Vaughan's Seed Store, and more recently with the Braslan Seed Growers' Company of San José, California, will be in this city January 11 and 12 next, representing the following well known western seed growers: The Ebbert Seed Co. of Rocky Ford, Col. (Vine Seeds); Hogue, Kellogg Co. of Ventura, Cal. (Pole and Lima Beans); A. J. Pieters of Hollister, Cal. (Onion, Lettuce, Sweet Peas, etc.). Mr. Wheeler's many friends in the trade will be very glad to see him.

Vaughan's Seed Store continued their shipments of Tuberoses to Europe by several of the past week's steamers. These bulbs should give the utmost satisfaction, as in quality they are especially fine this season.

W. C. Langbridge of the Jerome B. Rice Seed Co., Cambridge, N. Y., was among our visitors the past week. Mr. Langbridge says he is convinced that the garden Bean crop is very much shorter than a great many realize.

Charles N. Page of Des Moines, Ia., the chairman of the executive committee of the American Seed Trade Association, was also a visitor in the past week. Mr. Page came East to attend a meeting of his Association at Boston, December 28, and was accompanied by his daughter.

Mr. W. B. van Eyk, representing G. W. van Gelderen of Boskoop, Holland, will arrive for his annual visit to our nurserymen early this month. Messrs. van Gelderen make a specialty of Rhododendrons, Clematis, shrubs for forcing, and Roses. During Mr. van Eyk's stay in this country his address will be, care of Maltus & Ware, 14 Stone st., New York.

J. M. Thorburn & Co. have devoted the back cover of their 1910 catalog to illustrating, in natural size and color, their new Eschscholtzia "Thorburni." This sterling novelty will be offered to the trade at \$12.50 per 100 packets. A very large sale of this new annual is sure to follow its introduction; the retail rate is 25 cents.

At Boddington's both retail and wholesale catalogs are being mailed this week, and busy it makes things. This house has wonderfully increased its sales of Canua bulbs; in fact, already it has taken orders for a larger quantity than were disposed of up to March 1 a year ago. This week the usual select lines of florist's flower seeds, for first sowings, including Asters, Petunias, Salvias, Verbenas, etc., are being offered.

Martin C. Ebel has secured the rights for the manufacture of Aphine from George E. Talmadge, Inc., and has organized a new company under the title

J. BOLGIANO & SON
WHOLESALE SEED MERCHANTS AND
POULTRY FOOD MANUFACTURERS
BALTIMORE, MD.

of "The Aphine Manufacturing Company," of Madison, N. J. The new management fully realizes the great value of Aphine as an insecticide, and as practical business men and horticulturists appreciate the absolute necessity of producing it in its most efficacious form. Under such management the quality of Aphine will be maintained at the very highest standard.

The following extract from a letter received by a New York seedsman this week may help to solve the Pea shortage question; any way, do not take it too seriously:

"Probably progressive seed merchants will (since the discovery has been made), all be soliciting the half-breed farmers of Labrador to take contracts for growing seed Peas. Of course, if the soil and climate is so extraordinarily favorable as to produce over twenty-fold of matured seed and, above all, as bright and dry as represented, many experienced farmers will go there to establish Pea farms. Certainly, there will not be any danger of the Pea-bug where the mercury every Winter for eight weeks falls to and remains at fifty degrees below zero, often sixty degrees under, even if it does climb up to eighty above during the three Summer months."

Rickards Bros. "Nonpareil"
Lily of the Valley from Cold Storage

Some Fine Lily of the Valley

The picture shown is that of Lily of the Valley grown by Valentine Cieres, superintendent for Mr. F. S. Smithers of Glen Cove, N. Y., from stock furnished by Bridgeman's Seed Warehouse, Rickards Bros., proprietors, of their cold storage variety "Nonpareil," after being forced 21 days. As seen at this office the color of foliage and growth of flower was all that could be desired.

A Seedsman's Analyst

At the recent annual meeting in London of a society of seedsman, representing seed merchants in all parts of the United Kingdom, it was recognized that the organization should have an analyst who would test seeds for the members in regard to their purity and growth. Professor Biffen of Cambridge was to be approached with a view to his acceptance of the position.

Direct Importations
AT FOREIGN GROWERS' PRICES

From BELGIUM Palm, Araucarias, Bay Trees, Azalea Indica, etc., Boxwood, Rhododendrons, pot grown Shrubs for forcing, etc., etc.	From GERMANY Valley Pips. Early or late forcing. English Manetti selected for grafting.
From JAPAN Lilium Longiflorum, Gigan-teum, Multiflorum, etc. Full list of Japanese, Holland, English and French Nursery Stock Writes for catalogues, special lists, etc., mentioning the class of stock you are interested in.	From ENGLAND Our business is import and wholesale only. Don't write unless you use sufficient to make direct separate importations

Lily of The Valley!
FOR PROMPT DELIVERY

"EXPOSITION" GRADE This is an extra fancy grade of Berlin crowns. There are never enough of them to supply the demand. Out of Mr. Riemschneider's entire growing, he usually has only 50,000 to 75,000 of this grade, which is evidence of the care with which they are selected. In cases of 2,000 crowns, at \$30.00 per case.

"PERFECTION" GRADE This is a true Berlin, extra selected, 3-year old, straight long, clean crown, with long, fibrous roots. Under proper treatment they force out with tall racemes bearing the maximum number of large bells, free from decay at the bottom. The foliage is ample, but not too abundant. In cases of 1,000 pips, at \$13.00 per case.

"HOLSATIA" GRADE These are suitable for later forcing, or for cold storage purposes, and are highly recommended to seedsmen. Very fine selected 3-year old Hamburg Pips, very heavy roots, extra strong growth. Will hold over well in cold storage and produce good flowers the following Fall. In cases of 2,500 pips, at \$30.00 per case.

An Important Seed Case

A case of importance to seedsmen of New York State has been decided by the Court of Appeals in a decision in which it is held that when a seedsman sells seed of a certain kind to a farmer the seller of the seed impliedly warrants that the seed is of the kind asked for by the purchaser and, if it turns out to be seed of another kind or of a weed, the purchaser can recover damages from the seed-seller for whatever damage the purchaser suffers from loss of crops and reseeding of his fields. The action was brought by George M. Depew, who owns a farm a short distance east of Canandaigua, against the Peck Hardware Company, a corporation engaged in the hardware business in Canandaigua and at other places and, also, selling grass seeds of various kinds. The amount demanded by Depew as his damages was a total of \$822, and consisted of \$700 as loss of a year's crop of Alfalfa, \$80 for expense of plowing and fitting ten acres for re-seeding and \$42 for the cost of new seed to reseed the field, which Depew found necessary to plow up after a year's trial of the seed bought of the Peck company.

The action was first tried in County Court, where the jury rendered a verdict for Depew. The Peck company promptly appealed to the Appellate Division of the Supreme Court, which affirmed the decision of the lower court in a lengthy opinion written by Justice Spring. On an appeal to the Court of Appeals at Albany, the judgment of the lower courts was again affirmed.

The history of the case in brief is that Depew in 1904 went to the store of the Peck Hardware Company in Canandaigua, and asked to see some Alfalfa seed, with the intention of purchasing. He examined some seed, which the manager of the company produced before him and is said to have said was Alfalfa seed and the "best seed they could get." Depew purchased five bushels of the seed and sowed it on ten acres of his farm. In the Fall of that year the stand of Alfalfa appeared to be good, but in May, 1905, a large number of the plants supposed to be Alfalfa appeared to have yellow blossoms. Depew forwarded some of the yellow blossoms to the Geneva Experiment Station, and the experts there found that the plants were Trefoil and Dodder. It appeared that about half of the crop was of those plants. Another five acres, which was seeded with seed purchased from another dealer, showed the same proportion of weeds instead of Alfalfa, and that dealer when threatened with suit paid the damages claimed. The Peck company refused to pay anything, claiming that it was not liable, not having warranted the seed.

Crop Research in Palestine

To investigate the agriculture of ancient Palestine with a view to finding plants which will resist drought in the United States, an American company capitalized at \$70,000 is being formed in Washington, D. C., by Dr. Aaron Aaronsohn, a Turkish agronomist.

Dr. Aaronsohn who has enlisted the co-operation of the Department of Agriculture officials at Washington, recently announced the discovery on the slopes of Mount Hebron of a wild wheat which he claims to be the prototype of modern

Forcing Gladiolus

Many florists plant these in boxes, or among their carnations, in the Winter. They are excellent for decorative purposes and realize good prices, either wholesale or retail. Gladiolus are a good catch crop and take up but little room. The following are the best for this purpose.

Gladiolus Gandavensis Hybrids

America. The flowers, which are of immense size, are of the most beautiful flesh-pink color. \$3.25 per 100; \$30.00 per 1000.

Angusta. The florists' best white Gladiolus.

Bulbs, 1 1/2 to 1 3/4 in., \$1.75 per 100; \$16.00 per 1000.

Shakespeare. White and rose. \$1.75 per 100; \$15.00 per 1000.

May. Pure white, flaked rosy crimson; the best forcer. Selected bulbs, \$1.75 per 100; \$15.00 per 1000.
Brenchleyensis (true). Fiery scarlet. Selected bulbs, \$1.50 per 100; \$13.00 per 1000. First size bulbs, \$1.25 per 100; \$10.00 per 1000.
Boddington's White and Light. Extra selected bulbs, 1 1/2 in. and up, \$1.50 per 100; \$14.00 per 1000.
American Hybrids. A mixture of the choicest varieties of Gladiolus in cultivation. \$1.00 per 100; \$9.00 per 1000.

Remember, you may deduct 5 per cent. if cash accompanies order.

ARTHUR T. BODDINGTON, Seedsman
342 West 14th Street NEW YORK CITY

Please mention the Exchange when writing.

wheat and to be hardy and drought-resistant, possible of development in the arid and semiarid regions of the world.

Turkey will share with the United States in carrying on agricultural exploration through a Jewish experiment station at Haifa. Plant industry and meteorological data will be exchanged between Washington and Haifa.

Cleveland

With the weather conditions so ideal for New Year's Day, business was fairly good, retail orders coming in rather late but in time for morning deliveries. A great many New Year parties were held and corsage bouquets were in demand; they were of Violets and Valley principally, but Roman Hyacinths and pink Rose buds held their own and that helped to reduce stock.

There is a slight drop in prices. Red Carnations are selling for \$4, \$5 and \$6 per 100, Beacon bringing the highest price; Roses \$4 to \$15 per 100, American Beauty \$1 to \$6 per doz.; Lilies and Callas \$1.50 per doz.; Valley \$4 per 100; Romans \$3 and \$4 per 100; Paperwhites \$3 and \$4 per 100; Stevia \$1.50 per 100.

Gardenias were in demand this season but were hard to get, and prices have been way up. There is still a slight demand for Poinsettias, but they are poor now.

The Cleveland police force is endeavoring to enforce an ordinance against carrying concealed weapons, and while their efforts are producing results, some idiots still carry guns. While Mrs. Jessie Foote, one of our craft, was riding on a car, bound for home, some New Year roisterer shot a bullet into the car, and it penetrated her neck. Doctors have probed for the bullet, but have not yet found it; there are grave fears for her recovery. Mrs. Foote was employed by D. Charlesworth & Son on Euclid ave. and has been with them a number of years.

SPECIAL BARGAIN

To make room we will offer 250 fine **CALLAS** in 5-in. pots, ready to bloom. They need planting out or shifting into larger pots. Extra fine, choice, healthy stock, \$2.50 per doz., \$17.50 per 100, \$40.00 for the lot. Speak quickly. Will make beautiful plants for Easter.

T. N. YATES & CO.,
7356 Germantown Ave.,
PHILADELPHIA, PA.

Please mention the Exchange when writing.

It seems to be quite the proper caper nowadays to present most everybody about to hold public office with a basket or bouquet of flowers at their installation to office, hence our councilmen who take office Monday night, are receiving all sorts of pretty remembrances from kind (?) friends.

The Florists' Exchange is handling some nice Killarney Roses.

The Cleveland Cut Flower Co. is getting in some very fine Valley from the F. R. Williams Co.

Albert Albrecht reports fine business and continues to put in his attractive window displays.

It is rumored that Peter Nichols, the Arcade florist, will sojourn at Hot Springs, Arkansas, for a while, on account of poor health.

Mrs. Lillian Gaul, of Graham's flower store, is just recovering from a very severe cold, while C. Graham's cold is still working overtime.

R. Walters, the 82d st. florist, is doing a fine business in funeral work. Robert, the son, is looking after the buying end.

EVANSVILLE, IND.—The Ohio Valley Seed Co. has increased its capital stock from \$10,000 to \$25,000.

The Barteldes Seed Company Oklahoma City, Okla.

This enterprising company have an unrivaled seed industry in the great Southwest and established this one at Oklahoma City, their second large branch and warehouses, six years ago. They own a fine brick, 50x180 ft. two-story and basement building, situated on West Main st., five blocks from Broadway. This structure is specially adapted for their particular needs, and fully equipped for the conducting of a large wholesale and retail seed business. Besides this building, they have other warehouses in the city, and also run a branch retail store on East Second st., where a combination seed, flower and plant business is conducted.

The name of Barteldes has long been a well-known one, connected with the seed industry of America. The original store was established, 43 years ago, in Lawrence, Kansas, by the present head of the company. Twenty-five years ago a brother of Mr. Barteldes established a similar industry in Denver, Colo., which business was subsequently merged into the Barteldes Seed Co. Later, their Oklahoma City branch was instituted and is now the distributing point for the immense territory of the Southwest.

The manager here, Mr. J. F. Hickey, is a gentleman whom it is a pleasure to meet. He was formerly a traveler for the firm and is fully cognizant of the needs of seed buyers generally. His experience, together with his genial affability, makes him particularly well fitted for the important position he occupies.

During our conversation with Mr. Hickey, we gleaned that a Southern seed business varies quite a little from a similar industry located in the North. The Spring season here lasts until June, due, no doubt, to the fact that farmers can get two or three crops in a season off the same piece of land; also owing to the Winters being so short and mild, as a rule, there is a great deal of Fall sowing done every year, all of which makes the seed business in this quarter practically devoid of dull seasons, as compared with some localities.

To handle the business here requires a force of 35 people in addition to the several travelling men who are continuously on the road. Seeds of all kinds are handled, farm, garden and flower. All farm seeds are re-cleaned (after coming from their growers) with their own special machinery. Bulbs and tubers of all kinds and variety, together with all farm and garden implements are also handled; in fact, any and all necessities for the farm or garden can be supplied through the Barteldes Seed Co.

That the establishing of the Oklahoma City branch has been a wise undertaking is exemplified through the way in which the business has increased yearly since its inception; during the past year (1909) the increase over the year previous has been fully 100 per cent.

S. S. BUTTERFIELD.

The Florists' Exchange is exclusively a Trade Paper. Prices at which stock is offered in these columns are intended for the Trade only.

NURSERY DEPARTMENT

CONDUCTED BY
JOSEPH MEEHAN

AMERICAN ASSOCIATION OF NURSEYMEN

F. H. Stannard, Ottawa, Kan., President; N. P. Stark, Louisiana, Mo., Vice-president; John Hall, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., treasurer.

CARLINVILLE, ILL.—Will B. Otwell is discontinuing his nursery business and is advertising his growing stock for sale.

PORT ARTHUR, TEX.—C. D. Otis, a nurseryman of Lake Charles, La., is, it is understood, seeking the promotion of a plan to convert the famous Gates experimental farm into a nursery and experimental farm for the propagation of fruit and other trees, and on which are to be built greenhouses and other buildings for growing Ferns and Palms.

BERLIN, MD.—D. W. Babcock, who is a life-long nurseryman, graduating from the nurseries of western New York and foreman for J. G. Harrison & Sons of Berlin for the past ten years has leased the Dr. Hammond property on South Main st. for a term of years and will plant it to nursery and florist stock, making a specialty of forest and fruit tree and shrub seedlings, florists' bulbs, Roses and bedding plants.

Pinus flexilis The hardiness and desirability of the trees of the Rocky Mountains is taking a long time to impress itself on the minds of our planters. Here is one of the Pines of Colorado and New Mexico, desirable in every way, yet which could not be found in hardly any of the large collections of trees around us. The fault is mainly that of the nurserymen. Customers would get it and would be glad to have it, but where are the nurseries in which it could be obtained?

In common with all the coniferous trees of the region named, the *Pinus flexilis* is well adapted to the climate of the northern States. It is used to both cold in Winter and heat in Summer. Taking Santa Fe, New Mexico, as an example, the temperature of the seasons average nearly as they do in Pennsylvania, and all the trees of that region and of Colorado grow well here.

A *Pinus flexilis* tree would grace any grounds. Its appearance may be judged of from the illustration presented of a tree, about 10 feet high, perhaps the largest one of its kind in Philadelphia.

Seeds of this Pine are easily had from where it grows wild, and no one has an excuse for not growing it. In company with *Pinus aristata*, *Picea pungens*, *P. Engelmanni*, and the Douglas Spruce of Colorado it will find its way ultimately into all collections where beautiful and rare trees are desired.

The tree from which our photograph was taken was raised from a cutting sent home from Colorado, many years ago, by the late Thomas Meehan, when on one of his travels.

A Thicket of Wistarias As a vine, the *Wistaria* is in common use, often seen to great advantage climbing over trellises near dwellings, and often on the dwellings themselves. The Chinese is the one generally seen, it being the one most effective of all. A pleasing display is made by setting this vine to form a thicket, one or two, or more, being set together to grow as they will, one climbing over the other often. Sometimes a vine is planted to a partly dead bush, or one that is not valued, the bush acting as a support to the vine, and even if it kills the shrub, which it may do, it won't matter. The *Wistaria* shoots only need support for a year or two, which the shrub will give, after which it will support itself, the shoots becoming stiff enough to sustain themselves without aid. A tangle of *Wistaria* of this nature fits in well on the front of a woods, or in a corner, much better than when setting out by itself on a lawn. It makes a rather flat, spreading growth, following the line of its long shoots, for though in bush shape, as one may say, it still remembers it is a vine and makes growth accordingly.

On some old estates in our older cities this *Wistaria* has mounted to the tops of trees 50 ft. high, forming, when in flower, a display unequalled in the way of unique character.

The best time to set a *Wistaria* is in Spring. But little root can be had with it, hence the importance of pruning in the top well at planting. The vine is, in a way, tenacious of life. It sometimes remains as planted in Spring, without leaves, until a whole year has passed, then makes a start; so if one finds a vine of it that has not grown and the wood is green, as shown by scratching its bark, hope may be entertained that it will leaf out with the return of Spring.

Melias True From Seed

An enquiry comes to us from a correspondent in Alabama whether the *Melias umbraculiformis*, the Texas Umbrella Tree as it is called, will come true from seed. As this tree is not quite hardy enough to take its place among the hardy trees of Philadelphia, no experience from practical work is at hand to enable an answer to be given, but those acquainted with the tree in the South, where it is well known because of its use and beauty as a shade tree, say that it can be relied on to come true from seed. It differs so much, and to its advantage, from the common China tree, *Melias Azedarach*, that the one is not as good as the other. The *M. umbraculiformis* is the Umbrella Tree of the South, so named because that its growth resembles a huge umbrella something in the way old specimens of the *Catalpa Bungei*, as it is called, look when of large size.

Besides this, it has fragrant white, lilac-colored flowers, followed by transparent amber-colored seeds, both of which add to its merits. The seeds are so ornamental that botanists tell us they are often used as beads to form a rosary, in Catholic countries. It is popular all through the South and in California, and as it will live out in Philadelphia, in a sheltered, sunny place, it is proof that it could be planted, say from Virginia, southward.

Pinus flexilis. A Favorite Rocky Mountain Pine

An Evergreen for Screening

Our native *Arborvitae*, *Thuja occidentalis*, has long been known for its usefulness in planting where a spreading evergreen was not desired, and yet one to make some height was requisite, as it fitted the purpose exactly. In this respect it stands alone among evergreens, there being no other kinds of similar character. Slim growers can be had in the way of some *Junipers* and *Yews*, but in no case is there one just as good as the American *Arborvitae*.

There are some types of the Red Cedar which are comparatively of slim growth, still they are not as good as the *Arborvitae*; and besides this there is a fungus that

We expect the year of 1910 to be the greatest in the annals of the Nursery Trade—Are you prepared to work for and win your share?

sometimes attacks and breeds on these trees, which is apt to spread to fruit trees should there be any near. The Irish and other slim growing *Junipers* are not tall growing and are not reliable in retaining their foliage unblemished, so that there is absolutely no other evergreen to take the place of the *Arborvitae*.

The Hemlock, *Tsuga Canadensis*, can be used as a substitute. It spreads, of course, but it can be kept in bounds by trimming, submitting to it better than many evergreens would, so that it can be kept in control for many years.

There is the Chinese *Arborvitae*, *Thuja orientalis*, a tall, slim growing species, but it is hardly as compact a grower as *occidentalis*. Seedlings from its variety, the golden, *T. aurea*, will often give a compact, erect growing form, but whether these forms have been propagated in Europe is not known, as none appear to be offered for sale.

Xanthoceras Sorbifolia When growing in a shrubby the *Xanthoceras sorbifolia* becomes a shrub of large size, but this need not deter those who wish to grow it in pots for forcing purposes, for, when quite small, the plants flower freely. It is beautiful when in bloom, the flowers being white and borne in racemes. As they come with the foliage, in early Spring, but little forcing is required to bring forth its flowers, which adds to its desirability as a shrub for forcing. Six weeks of greenhouse growth would bring it into flower.

When to be used for forcing for Easter the plants should be potted in Autumn, so that they may be well settled by Spring. Plants that have been transplanted often are the best for forcing. The check this gives them is in favor of their flowering, besides this such plants are better rooted, ensuring good growth and flowers.

This shrub is a Chinese one, and, though no one would think so from its appearance, it is closely allied to the Horse Chestnut in botanical relationship.

Weeping Hazel One of the most interesting shrubs in the weeping or drooping class is the Weeping Hazel, as it is called, a variety of the European Hazel, but having larger leaves than the common *Avellana*, which indicates that it may be a variety of some of the *Filberts*, they being in themselves but varieties of *Avellana*. The most of these *Filberts* have quite large leaves.

The weeping one, the subject of our notes, forms a large spreading bush, making when but 6 to 8 ft. high a diameter equalling the height, the branches drooping in a most pleasing manner.

There are but very few of this Hazel in collections here, so far, but there will be more when its merits are known. As all Hazels are propagated from cuttings and layers without difficulty, there should be no trouble in nurserymen soon getting up a stock of it, the cuttings being made in Winter, placed in sand in a cool cellar, and planted out in Spring; layering is done in Midsummer, using the shoots of the same season for the purpose.

It is likely that the seedlings of this Weeping Hazel would come true from seed, but as a rule no variety can be depended on to do it. Some may come true, others not, at least this is how seedlings of most varieties turn out.

The Pecan Nut Industry

One would suppose that with the forests of Pecans in some of the southern States there would be no call to set out orchards of them in other States, but it seems that no matter how abundant a fruit, or nuts, may be in a wild state, there is always a profit, or supposed one, growing them in orchards. However, the interest displayed in setting out Pecans is not connected with seedlings from wild ones, but with improved kinds, soft shelled and others, propagated by grafting on the common seedlings.

Anyone expecting to set out trees of Pecans should plant the grafted ones, and not rely on seedlings from some tree bearing excellent nuts. Trees cannot be depended on to reproduce themselves from seed so as to be exactly as they were; some of the seedlings may give as good a nut as the parent, others different, but with grafted plants, say from a fine, thin-shelled sort, there is no question as to what would be the result.

There is all the difference in the world between the old thick-shelled Pecans we used to find in market, and the thin-shelled ones now beginning to appear there.

When procuring nuts for the raising of seedlings, care must be taken that fresh ones are used. Those purchased in stores are not always reliable. Many are a year old; and then the polish they receive to aid their appearance is not thought to aid them at all for sowing. The best way is to find a party in the South who can ship direct from there from recent forest collections. When wanted for stock the first grade is not necessary. The second size is just as good for the purpose and gives a greater number to the bushel.

BABY RAMBLER ROSES

BABY DOROTHY. The best yet. Color deep pink, fine form, a profuse bloomer. Strong field-grown plants, \$25.00 per 100; 4-in. pots, in bloom, \$15.00 per 100.

BABY CRIMSON (Mad. Norbert Lavasseur) Strong field-grown, \$15.00 per 100; 4-in. pots, in bloom, \$12.00 per 100.

\$2.50 per Gallon

If your supply house cannot furnish you with Aphine write us for names of our nearest selling agents.

APHINE MANUFACTURING CO.,

MADISON, N. J.

Please mention the Exchange when writing.

Newport (R. I.) Horticultural Soc.

To celebrate the twentieth anniversary of the founding of the Newport Hort. Society a dinner will be given on Tuesday evening, Jan. 11, 8 o'clock sharp, at Mercury Hall, Newport. A thoroughly good time is expected.

"Parthenocissus Tricuspidata"

Any one recognize it? Well, this is the new name for *Ampelopsis Veitchii*, given it on the recommendation of a Mr. Sprague, one of the herbarium assistants at Kew, Eng. We trust it will take some much higher authority to cause us to lose the better and old established name!

Bermudian Customs Duties

On imports of bulbs of the *Lilium longiflorum* and *Harrisii* types into Bermuda during the year 1910, a duty of 48 the thousand will be charged.

Tobacco dust, stems or other tobacco refuse imported solely for use for agricultural or horticultural purposes, free. So also are trees, plants, bulbs and shrubs for planting with the exceptions above noted.

John Gerard's Catalog

A little, badly printed book of twenty-four pages, in which 1033 species are enumerated, was the first complete catalog of any one garden, private or public, ever published. The only copy extant today is in the British Museum. This was printed in 1596 by the celebrated John Gerard, the publisher of "The Herbal," and who may appropriately be called one of the fathers of British gardening.

The South African Pipe Gourd

By request of A. D. Shamel, physiologist, connected with the Bureau of Plant Industry, U. S. Dept. of Agriculture, Washington, D. C., Prof. David Fairchild, in charge of foreign seed and plant introduction, has sent to John S. Weaver, plant breeder, of Kinzers, Pa., some seed of the South African Pipe Gourd, *Lagenaria vulgaris*. The seed is for experimental purposes, and should it prove successful it will open a new agricultural industry to truck and Tobacco farmers, and florists, who reside in country districts, as the gourd is valuable for the manufacture of smoking pipes.

Firms Incorporated

NORFOLK, VA.—A charter has been granted the Newton Floral Co. to grow and sell flowers. A. M. Newton is president, L. E. Guy, vice-president, A. R. Newton, secretary and treasurer. Capital stock, \$5000 to \$15,000.
CHICAGO, ILL.—American Horticultural Co. has been incorporated for the purpose of carrying on a horticultural and landscape gardening business. Capital stock \$5000. Incorporators: John C. Abbott, William H. O'Brien and Jay W. Butler.

Prices Advertised in these Columns are for THE TRADE ONLY

Morris Co. (N. J.) G. and F. Society

The Annual Smoker of this thriving Association will take place on Wednesday, Jan. 12, at 8 p. m., in Masonic Hall, Madison, N. J.

Luther Burbank

Rumors have been circulating in the daily press to the effect that the grant of \$10,000 a year, by the Carnegie Institute, to the above-named gentleman which, at period of institution, it was understood was to be for ten successive years, or \$100,000 in all, in return for scientific research and data, is about to be rescinded; if so, this will be several years in advance of the original term set. Reasons for the reported withdrawal are not given.

Linnaeus as a Name-Maker

It would seem from a letter which old John Collinson wrote to Linnaeus, in 1775, that those who change the names of plants and those object to such changes have been ever with us. The following, though written more than 150 years ago, has a familiar sound. Collinson writes: "I have had the pleasure of reading your 'Species Plantarum,' a very laborious and useful work, but, my dear friend, we who admire you are much concerned that you should perplex the delighted science of botany with changing names that have been well received, and adding new names quite unknown to us. Thus, botany, which was a pleasing study and attainable by most men, is now become, by alterations and new names, the study of a man's life, and now none but real professors can pretend to attain it."—*American Botanist.*

FRITZ BAHR

Carnations**The Necessity of Feeding the Plants**

Carnations in a healthy growing condition, full of flowering shoots and buds, are benefited by feeding. They are ready for additional nourishment, besides what the roots can take in from the soil in the benches. Every grower should, for his own satisfaction experiment along this line. Different soils need, quite often, different fertilizers in order to get desired results; and while there might be little danger or harm result whenever fresh cow manure in liquid form and light doses, is used practically for every crop we grow indoors, large places, or others peculiarly located, often find it inconvenient to use it. Personally, I must say that after numerous trials and close observation I have found better, or at least equally good results are obtained by using fresh liquid cow manure than with any other fertilizer. Ours is a heavy loam soil. This, of course, by no means

proves that other fertilizers are second in importance, for I know most successful growers who never use cow manure outside of what they get in "shredded cattle manure." One thing, however, is certain, and that is if a grower has good Carnations now and should have no other fertilizer on hand than the cow manure, he needn't worry about it, but by proper application the Carnations will surely respond. As with the shredded manure, bone-meal, sheep manure or any other fertilizer that may be used, an overdose is worse than none at all. If the plants are not able to take up the food you give them, the consequence will be the souring of the soil, and put on what you may can't sweeten it again while indoors.

Applying Fertilizers on the Benches**Bone Meal and Sheep Manure**

It is always well to lightly cultivate the surface of the soil in the benches before any fertilizer, whether liquid or otherwise, is put on. If the fine roots are near the surface it will of course require more care to do this than when the soil is free from the surface. It is not, but by this time, if no top dressing of soil has been applied, the soil must have settled down considerably, and this, with the washing from watering with the hose, usually brings conditions about where, by close inspection, roots can be noticed near the surface. In this case, keep away with whatever tool you might use in cultivating from the plants. Do your stirring or loosening up of the soil along the center of the rows, between the plants, after which a top dressing of fine soil, of about one and one-half inches in thickness, over the entire surface of the bench is in order. On top of this spread a layer of bone meal, just enough to have the surface of the soil colored with it, and again on this may be spread a layer of sheep manure of the same proportions. Now lightly mix the two with the soil by hand, after which give the bench a thorough watering. As to the condition the soil ought to be in when applying fertilizer, it is always safe to have it so that a watering would be of benefit. Too dry soil is as bad as if too wet, for when the soil is too dry, some of the first watering will run through and take some of the fertilizer along; when too wet, another soaking after the fertilizer is on would be out of place, especially at this time of the year. Whenever a top dressing of soil is not required, a heavier dose of fertilizer might be used. A better way, however, it to give only light doses and repeat in three weeks or so. With a layer of good soil one inch or so in thickness a light sprinkling of bone and sheep manure is enough nourishment for the Carnations at one time. Some of us might get the impression that because we have put on the benches an extra heavy mulch of fertilizer and the plants, as a result, have not died, they must have been benefited by it; but this, of course, is wrong. As long as we can't go by any set rule as to just what proportions to use it is always well to go slow, use a little at a time, and repeated in that way but little harm can result.

Applying Shredded and Liquid Cow Manure

When used as a mulch, the shredded cattle manure should be mixed with soil. We have used a mixture of one-third of the manure to two-thirds of soil, applied about one inch in thickness over the bench, and this followed three weeks later by a light top dressing of the pure manure showed a remarkable improvement on a bench of Enchantress last year, during February, over a bench alongside it where no manure or fertilizer of any kind was used; but outside of that this bench received the same care regarding cultivating, watering, keeping the plants clean and disbudbed. Using this manure as a liquid, two ordinary pails full, dissolved in a four barrel full of water gives about the right proportions. Whenever fresh cow manure is made use of the same proportions will do, and a little stronger mixture won't hurt. If the plants are in a vigorous condition, and cow manure is made use of in light doses, an application every three weeks is far too often. It is far better to give weak doses and oftener than to use strong ones and only once or twice during the Winter. There, as in the case when applying bone meal, the soil of the benches should be in such a condition that it won't stick to the hands when watered. I have never experienced any bad results from applying liquid cow manure, even on a dust dry bench, but have seen plants suffer where a heavy dose of manure was given on a soaking wet bench during January.

Hydrangeas for Easter**Higher Temperature Necessary From Now On**

Plants intended for Easter should be brought to a Carnation house temperature without delay. They won't come in any too early, in fact, will have to go to warmer quarters later on. If the plants were grown in pots during Summer they will be in shape to stand a few degrees over 50 at night, for their roots are

all there to support the top growth properly. With the plants, however, which had field culture and were started up last Fall, it is advisable to go slow, even if they have been in a cold house up to now. Exposing them to too much heat might result in yellow foliage and other trouble. Only too often this mistake is made, not only with Hydrangeas, but Roses, Deutzias or other plants intended for forcing; and while some plants do not show the bad effects as much as others, it is never proper to take a plant out of a temperature such as is found in a cold frame in December, or a Violet house, and bring it into a Rose house. Pay proper attention to the drainage of the pots the Hydrangeas are in. Next to the Astilbes come the Hydrangeas as lovers of water, and few plants we grow in the greenhouse suffer more if neglected on that account; and yet they suffer as much if improper drainage prevents the water from passing through the bottom of the pot. Avoid this. If pot grown plants are made use of, light doses of liquid cow manure are in order as soon as the plants make growth. Give the stock nations, a crowded one means loss of foliage, and that spoils the appearance of the plants, no matter how fine the blooms.

Gladioli**Bulbs for Spring Blooming Should Be Planted Now**

If you had a lot of Gladioli last Summer, and it hardly paid to cut, pack and ship them, you might hesitate about planting some indoors for April and May blooming; and yet the man who conducts a retail plant will find them profitable to grow, even when planted between Carnations. I do not mean to say that Gladioli bulbs between the Carnation plants when the latter are in fine growing condition and require every inch of room on the bench they are in. Gladioli, or anything else, have no business in the bench then—you can't grow two crops at the same time in the same space, and have them both good; one or the other is going to suffer. But sometimes we have a house or a bench where, for some reason, the Carnations are not as good as they might be; or there might be a bench which has been blooming since last Fall and doesn't look as if it would hold out until Spring; in such cases, or whenever other bench room might be at hand, Gladioli may be planted, and if not neglected will prove a paying crop. Bulbs planted now will not be in bloom by Easter, but that shouldn't matter; if they are well grown and are good varieties they are bound to sell at a good price. One of the most beautiful of the many is America; its shell pink color makes it one of the most desirable of all the Gladioli the florist can grow, whether for indoors or outdoors. The bulbs can be bought for \$3 to \$4 per 100. If a good red is desired Brencleyensis is the thing, and Augusta is perhaps better known for indoor blooming than any other for it is a white one and a good forcener. Among the miniature Gladioli, Colvillei alba is one of the very best, its cheapness, \$5 to \$6 per 1000, and its usefulness as a cut flower, make it so desirable. Plant some. If short on room at the present, the bulbs can be started in pots and planted out afterwards, or in boxes below some bench, in which they can remain, to be brought on top of the bench later on.

Candytuft and Stocks**Two Useful Flowers for the Retail Grower**

Only too often does the man who grows the stock, or part of it, which he retails, find it profitable to grow certain things which he had to throw away. He wouldn't think of bothering with this is natural, for the wholesale market, usually, is regulated by what Roses and Carnations bring. When there are plenty of both, stock such as Pansies, Sweet Alyssum, Candytuft, Stocks and others are considered side lines and do not cut much figure; but the retail grower has always a call for just such flowers and his customers pay good prices for them. The only trouble is that we are not paying sufficient attention to their culture—that is where we are making a serious mistake. Candytuft and Stocks sown out now will produce fine flowers during April and May, and be out of the way for late bedding stock. Don't grow too much of each, but what you do grow, grow well. There isn't any extra culture required for either in order to get good results, both love a cool house and well drained soil. Empty Mum benches will do; the old soil can also be used if worked over and a little more well rotted manure is added.

GRAND FORKS, N. D.—Xmas trade was about the same last year, cut flowers being most in demand. There was not so much sale for red flowers or, rather, customers would not take red at a higher price than other colors. Ordinary Carnations sold at \$2; Enchantress and red, \$2.50. Brides, Bridesmaids, \$4; Richmond and Killaree, \$5; Am. Beauty, \$6 to \$24. Violets, \$1. We did not handle plants. FRANK V. KENT & Co.

NEW CROP FLOWER SEEDS

HIGH BRED ASTERS

Are our specialties, and great care is taken to have only the best and those that will give the greatest satisfaction. We have been very highly complimented on the choiceness of our strains.

ASTER. QUEEN OF THE MARKET. This is the earliest of all, fully three weeks earlier than other Asters.
 Selected white \$0 10 \$0 15 \$0 50
 Selected crimson 10 15 50

Stumpp & Walter Co.

50 Barclay St.
NEW YORK

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in General.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published every Saturday by the A. T. De La Mare Ptg. and Pub. Co. Ltd., Proprietors, 2, 4, 6 and 8 Duane Street, New York. A. T. De La Mare, president and managing editor; Jas. H. Griffith, secretary; David Touzeau, treasurer. The address of the office is the address of this paper. Short address: P. O. Box 1697, New York. Telephone 3765-6 Beekman

PRINCIPAL OFFICES

Chicago: Margaret T. Flint, room 614, No. 60 Wabash Avenue; tel. Randolph 2000. Office hours: 9.30 to 12.
Boston: J. W. Duncan, Jamaica Plain, Mass.
Philadelphia: A. H. Secker, 306 Wood Building, No. 34 So. 16th St.

Yearly Subscriptions.—United States and Mexico, \$1.00. Canada, \$2.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Draft on New York. Post Office or Express Money Order; if paid in cash please register letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

Registered Cable Address: Florex, New York.

Telegrams.—Telegrams received in this office up to 3 p.m. Wednesday, containing changes in advertising, will receive attention for the issue of the Saturday following; likewise, telegrams having informative matter intended for our new columns will be received up to Thursday 9 a.m. News telegrams should be forwarded after 6 p.m. Wednesday and marked "Night Press Message, Collect." These will be forwarded by the telegraph companies at their newspaper rate, providing the material so forwarded contains news for the paper.

Index to the Florists' Exchange, Vol. XXVIII

This index, covering the period from first issue in July to last in December, 1909, will be shortly ready for distribution. Subscribers desiring a copy of this index can obtain same by notifying us by post card; copies will be mailed to those who have already previously advised us to that effect.

Thirty Years' Tax Exemption to Tree Planters

Commissioner Whipple of the Forest, Fish and Game Department, in his annual report to the Legislature of New York State, made Jan. 5, among other recommendations, advises the passage of a law whereby land dedicated to tree growing and planted with trees be relieved from increased taxation for thirty years.

The passage of such a law, in every State, would quickly solve the problem of reforestation.

The Florists' Exchange Design Book

A new edition of the Design Book is now in preparation and, it is expected, will be issued about January 20. It will be found a decided improvement on the earlier editions, has been completely remodelled and now contains 80 pages, covering a multiplicity of designs. It will be freely admitted the most valuable compendium of its character ever offered to the trade, as well as the cheapest. It is sold only in connection with a subscription for this paper; The Florists' Exchange two years and one copy of the Design Book, new or renewal subscription, for \$2.50.

To Our Readers

We beg to remind our friends and subscribers that our constant endeavor is to record in The Florists' Exchange all matters of trade interest, and we shall be much obliged if they will co-operate with us in this aim by giving us early intimation of all changes in firms, deaths, legal cases affecting the trade, local matters likely to prove interesting to others, also information as to crops and novelties in flowers, seed and nursery subjects.

James Stockstill

James Stockstill of Dayton, O., died in Baltimore December 25, following an operation at one of the hospitals there. He had been ill for some time and had been removed to the hospital in the hope that a surgical operation might prolong his life.

The deceased was for a number of years engaged in the nursery business, with headquarters at Geneva, N. Y. He was born near Dayton 78 years ago. He is survived by two daughters.

Federal Bill for Nursery Stock Inspection

Congressman Jas. S. Simmons of New York has, we understand, introduced a bill having as its object the thorough inspection of imported nursery stock as well as making provision for interstate inspection. The provisions of the bill in question appear to be sufficiently regulative so far as it applies to importations, but the clauses affecting interstate dealings are too vague to be effective and, so far as we can read between the lines, would simply act as a supplement to existing State restrictions.

What the nurserymen require is a bill with regulations applying uniformly to every State in the Union.

The New York-New Jersey Interstate Park

The proposed State Park, now made fully possible through the gift of Mrs. E. H. Harriman of 10,000 acres of ground and cash \$1,000,000, supplemented by heavy cash contributions from other public spirited citizens and appropriations from the States of New York and New Jersey, will give to the citizens of New York and surrounding towns, eventually, the grandest park system in the world excepting that of the Yellowstone, and this latter is not accessible to the masses. The area will be immense, the character of the scenery of the most diversified, and for a number of miles it will border the Hudson River on the west side from below the line of the city of Yonkers north to Cornwall.

Such creations are only possible in America.

Second Class Mailing Rates

As is well understood, all reputable magazines, newspapers and periodicals, are distributed through the mails to subscribers at a charge to the publishers of one cent a pound. This rate has been in force ever since 1870, and, through its statesmanlike provision, subscribers have been enabled to secure their literature at a most reasonable charge, the publishers paying the postage.

The fact has been called to President Taft's attention that the Post Office Department is losing many millions of dollars a year in carrying second-class mail and, accordingly, the President has advised Congress to look into the matter with a view to relieving the Post Office of this annual deficit.

The advisability of increasing second-class rates has two sides, and it will be interesting to watch the debate in Congress when the matter comes up—which it probably will, very shortly.

The Government point of view is that, on the face of the transaction, it is out of pocket so many millions a year on the second-class mail instead of coming out whole or at a profit.

On the side of the people, once they understand the question, there will be raised an outcry that will shake out of their seats the men who will cast a vote in favor of a raise in postage rates on periodicals if said tax is raised, as some assert it is to be, to 8 cents a pound or even to 4 cents a pound.

Through no fault of the Post Office Department, as we see it, but through Congressional action in the past, many of the present charges on mail matter are ill-balanced and if the forthcoming expected legislation could be made to embrace an inquiry into the entire system of rates, some good may result therefrom for all the people.

This inquiry should include the free mailing of free seeds, the franking privilege, rural free delivery, parcel post, a reduced rate on matter of the third and fourth classes, and a quickened delivery of same over the delays now so prevalent.

The leading question is, Are the people of the progressive United States ready and willing to be less liberal in these matters than are foreign countries?

Canada, if we mistake not, charges half a cent a pound on second-class matter. That country has a larger area than the United States to distribute it over and about one-twelfth of our population.

Nearly every civilized country but this enjoys a real, effective system of parcel post. Mail of all classes is handled in several countries with more celerity than here.

Each additional one cent a pound on second-class rates means a yearly personal tax on every liberal subscriber for literature of anywhere from \$1 up, or a big shortening of the amount they are now receiving if the publishers conclude to cut down their issues and themselves carry the tax, a proposition not to be decided upon until the new rate is fixed.

Some assert the entire agitation is a bluff, brought about through outside agencies, to defer the coming of a parcel post and incidentally help the express companies cut more melons!

Certain it is that through the operation of the trade papers, the agricultural press and certain of the large weeklies, an immense revenue has developed to the Government through the first-class mail (letters) which follows their publication.

Of stamps, 8,712,907,031 were sold in the past fiscal year. Probably 90 per cent. of these were used for business purposes, one-half the quantity of which, at the very least, it would be fair to state were used in connection with the publishing business, either by publisher, subscriber, advertiser or purchasers from advts.

In other words, our claim is that at least one-half of the letters mailed in the country are eventuated through the operation of the press.

Surely, this is worth consideration.

The American Carnation Society

Registration of Carnations

The Cottage Gardens Co., Queens, L. I., N. Y., register the following two new Carnations:

Alma Ward—Prosperity×White Seedling; White, sometimes showing delicate splashes of pink; size 3½ to 4½ inches; stems 26 to 42 inches; remarkable for size of flower and length of stem; strong and vigorous grower.

Mrs. C. W. Ward—Mrs. T. W. Lawson×Mrs. Roosevelt; deep pink lighter than Lawson, but darker than Winsor; size 3½ to 4 inches; stem 24 to 36 inches; early and free bloomer, producing fine flowers as early as September 1. A. F. J. BAUR, Sec. Indianapolis, Dec. 30, 1909.

S. A. F. and O. H. Appointments

President F. R. Pierson has made the following appointments:

Executive Board, Three Years

Willis N. Rudd, Morgan Park, Ill.
Robert Craig, Philadelphia, Pa.

Botanist

Prof. John F. Cowell, Botanic Gardens, Buffalo, N. Y.

Pathologist

Prof. H. H. Whetzel, Ithaca, N. Y.

Entomologist

Dr. S. A. Forbes, Urbana, Ill.

Washington Representative of the Society

William F. Gude, Washington, D. C.

Taxif and Legislative Committee

Patrick O'Mara Jersey City, N. J. chairman
J. A. Valentine, Denver, Col.
J. C. Vaughan, Chicago, Ill.
Patrick Welch, Boston, Mass.
John G. Esler, Saddle River, N. J.
J. O. Thilow, Philadelphia, Pa.

Committee on School Gardens

Benj. Hammond, Fishkill-on-Hudson, N. Y., Chairman
A. T. De La Mare, New York, N. Y.
Prof. John F. Cowell, Buffalo, N. Y.
Wm. B. Durie, Rahway, N. J.
H. B. Howard, Chicago, Ill.
Joseph Heacock, Wyncote, Pa.

Committee on National Flower Show

As the work of this committee has not been accomplished, the committee appointed by Pres. Valentine is continued, except that E. A. Stroud of Overbrook, Pa., has been appointed to fill the vacancy occasioned by the resignation of Edwin Lonsdale.

National Council of Horticulture

E. G. Hill, Richmond, Ind.

State Vice-Presidents

Alabama—George E. Luffman, Birmingham.
California, North—Hans Plath, San Francisco.
California, South—Morris Goldenson, Los Angeles.
Colorado—N. A. Benson, Denver.
Connecticut—Wallace R. Pierson, Cromwell.
District of Columbia—Peter Bisset, Washington.
Florida—E. N. Reasoner, Okeech.
Georgia—Daniel C. Horgan, Macon.
Idaho—J. W. C. Deake, Twin Falls.
Illinois, North—Leonard Kill, Chicago.
Illinois, South—J. P. Ammann, Edwardsville.
Indiana—W. W. Coles, Kokomo.
Iowa—James S. Wilson, Des Moines.
Kansas—A. H. Whitcomb, Lawrence.
Kentucky—D. B. Honaker, Lexington.
Louisiana—Harry Papworth, New Orleans.
Maine—William Miller, Bar Harbor.
Maryland—R. Vincent, Jr., White Marsh.
Massachusetts, East—E. Allan Peirce, Waltham.
Massachusetts, West—A. J. Loveless, Lenox.
Michigan, East—Michael Bloy, Detroit.
Michigan, West—Henry Smith, Grand Rapids.
Minnesota—Theo. Wirth, Minneapolis.
Missouri, East—Otto G. Koenig, St. Louis.
Missouri, West—W. L. Rock, Kansas City.
Mississippi—S. W. Crowell, Rich.
Nebraska—John J. Hess, Omaha.
New Hampshire—R. E. Hannaford, Portsmouth.
New Jersey—Joseph A. Manda, West Orange.
New York, East—A. L. Miller, Brooklyn.
New York, West—George B. Hart, Rochester.
North Carolina—J. L. O'Quinn, Raleigh.
Oklahoma—George Stiles, Oklahoma City.
Ohio, North—C. J. Graham, Cleveland.
Ohio, South—E. G. Gillett, Cincinnati.
Oregon—James Forbes, Portland.
Pennsylvania, East—W. P. Craig, Philadelphia.
Pennsylvania, West—Fred Burki, Gibsonia.
Rhode Island—L. J. Reuter, Westerly.
South Carolina—C. A. Moss, Spartanburg.
South Dakota—E. C. Newbury, Mitchell.
Tennessee—C. L. Baum, Knoxville.
Texas—Alexander Millett, Dallas.
Virginia—W. A. Hammond, Richmond.
W. Virginia—A. Langhans, Wheeling.
Washington—Amy L. Lambly, Spokane.
Wisconsin, East—Fred Holton, Milwaukee.
Wisconsin, West—C. E. Schaefer, La Crosse.
Canada:
Ontario—W. W. Gammar, London.
Manitoba—H. E. Philpott, Winnipeg.
Quebec—George A. Robinson, Montreal.
Alberta—A. M. Terrill, Calgary.

The Men We Meet

P. D. Barnhart

The gentleman whose life is briefly sketched in the narrative which follows has for over four years represented, with able pen and a full heart, the horticultural interests of his adopted State—California—and, more particularly that section wherein he has taken up his permanent home, the Southland thereof.

Mr. Barnhart was born Dec. 14, 1849, on a farm in the beautiful Cumberland Valley of Pennsylvania, two miles northeast of the thriving village at that time—now a prosperous little city—Mechanicsburg. Here, also, was the birthplace of his father and his grandfather. His mother was one of the descendants of the early settlers in the same valley who came originally from Germany, the family being named Rupp, and many of whom still live there.

During the Civil War, when every able-bodied man either volunteered or was drafted into the service, he was obliged to follow the plow, preparing the soil for the seed, and to swing a grain cradle in harvesting the crops. When fourteen to sixteen years of age he was privileged to attend Pennsylvania College at Gettysburg, after which he went to the western part of the State, working there for two years on a combination nursery, greenhouse, small fruit and truck farm. Leaving that employ he traveled to St. Joe, Missouri, where, for two years, he acted as traveling salesman for Claggett & Munger, nurserymen, and delivered the first lot of trees planted in eastern Kansas, at Marysville, at that time the terminus of the Missouri Pacific R. R.

At the age of twenty Mr. Barnhart was urgently requested by his stepfather, John Donaldson of Kittanning, Pa., to return and take charge of his nursery and greenhouse establishment, in succession to Alonzo D. Clark of Syracuse, N. Y., who had resigned the place to go into business for himself in New York State.

At the age of twenty-five, having saved some money, he went into the nursery business in partnership with relatives which terminated unfortunately. Stripped of money but not dismayed he moved to Baltimore where he had charge of Cromwell & Congdon's nursery and greenhouses for two years; thence back to Pennsylvania where for several years he remained and was engaged in growing fruit, flowers and vegetables.

In 1897 Mr. Barnhart removed with his family to California under contract with an orchard company to superintend a fruit farm of 450 acres. His arrival there was simultaneous with the disintegration of the concern, and he did not get even one day's work there, but was thrown at once on his own resources.

The land was strange, the conditions so new and entirely different from previous experiences that the lessons of life had to be learned anew.

Of this part of his life Mr. Barnhart says: "I found employment taking care of private places, and in doing so was enabled to study plant life as it is found nowhere else in the United States. Part of this experience was in the San Joaquin Valley, a territory as large as Pennsylvania, part of it in and about Los Angeles, where I verily believe is grown a greater variety of plants in the open than in any other part of the world, not all of them, to be sure, in the greatest perfection. To study their habits and requirements I have spent much time and thought and some money, realizing at the same time that much, very much, is yet to be learned about plant life as it grows in this wonderful Southland of California."

To Mr. Barnhart's arduous and thorough study of plant life in California is due his call a few months ago to the editorship of *The Pacific Garden*, owned by a corporation composed entirely of thoroughly trained men in the art of gardening, and of which fact our readers were duly apprised at the time. In this publication as well as in *The Florists' Exchange*, and other sources, Mr. Barnhart is doing able work for horticulture, also for the Pacific Coast, for it is due to his good pen that we have lost more than one good man from this side of the Alleghenies; however, as our loss is California's gain, and those who have migrated there seem perfectly content with their new life, we have no fault to find.

Shortly after reaching his majority, Mr. Barnhart was married to Nancy A. Horner, whose ancestors were famous musicians in western Pennsylvania for more than a half century. The union was blessed with a family of six children, four boys and two girls, the youngest of whom sleeps in the cemetery at Bakersfield, Cal. The children are scattered over the world; the surviving daughter married an architect who lives in Paris. One son, a minister of the Methodist Episcopal Church is in Nevada City, Cal. Another, a musical genius and a singer above the average in ability, lives in New York. Still another is a physician, a resident of Los Angeles, while the fourth son, a mechanical genius, lives in Aberdeen, Washington. All the children inherit to a greater or less degree the musical instincts of their mother; none of them have shown any predilection for the study of plant life.

Parasitic Plants on Rhododendrons

"Do not apply manure to Rhododendrons, as there is a plant parasite that grows on the roots, which plant is killed by the manure, eventually causing the death of the Rhododendron."

This information, imparted to me a few days ago by a practical nurseryman, was so entirely antagonistic to my observations and practical experience of over twenty years in propagating and growing one of the largest stocks of Rhododendrons in Europe, that it caused me to wonder if environment had any influence in changing the character and nature of plants so much as to demand an entire change of treatment.

So far, I have been aware that the only plant supported by the root of the Rhododendron was the Rhododendron itself, and the following case, which came under my notice a few years ago, will go to prove that they are benefited by the application of manure. This was an avenue of over fifteen hundred plants which were turning yellow and dropping their leaves to an alarming extent. Being called to examine these plants and to prescribe for their recovery, and after ascertaining that the drainage was all right, I had them mulched six inches deep with moss litter manure. This was taken from stables where moss litter was used for bedding horses and, as you will know, owing to the absorbent nature of the moss, it contained nearly all the urine as well as the excretion of the animals, making it one of the strongest natural manures. This lay as a surface mulch through the Winter and was forked lightly into

P. D. Barnhart

the soil in the Spring, and I can conscientiously say, from close and careful observation, that the effect of the above application was everything that could be desired and, as the writer remembers, these plants, four years after the application, were one of the finest sights in the country with their wealth of foliage and bloom.

I have also used well rotted manure with success in growing them in the nursery for over twenty years, surely disproving the expression which begins this article.

There is a prevalent idea, even among nurserymen, that a peaty soil is indispensable for Rhododendrons, and often great expense is incurred in bringing peat from a distance in order to make a Rhododendron bed. The digging out of the solid, natural soil and replacing it with peat not infrequently leads to a greater evil—one that is seldom foreseen—the new peat acting as a drain for the surface water percolating the ground surrounding it, and the spongy peat holding the water precisely as a sponge does, the bed consequently becomes waterlogged and the failure of the Rhododendron is a natural sequence.

It is pretty generally known that Rhododendrons and most other plants of that tribe abhor chalk or calcareous soil of any kind and, if planted in it, they will soon languish and eventually die outright. On the other hand, it is very questionable whether the Rhododendron likes peat above all other soils. Cases have come under my notice of the very finest specimens—finest in growth,

foliage and flower—which were growing in fibery loam with an admixture of a little peat and sand, sufficient to make the whole porous, yet not too light. The question of peat versus loam for these glorious plants is one of importance to owners of private gardens, who, as a rule, if not located on a peaty soil, bewail the absence of Rhododendrons. There must be thousands of gardens where soil is not peaty, yet with the absence of chalk, where Rhododendrons would grow to perfection, but from which they are now absent because their owners think it useless to plant them and, on the other hand, their culture has been abandoned after the expense of making peat beds, the failure of which had probably arisen from defective draining.

Pardon me if I have digressed from the usual method of asking information through your valuable paper, but I thought that a few observations of my practical experience and results obtained therefrom might be appreciated by yourself or any of your readers, in answering me the question as to the name of the plant (if there is such) that grows on the root of the Rhododendron and is killed by the application of manure? INQUIRER.

[We would be pleased to see this inquiry taken up by those qualified to answer. The nurseryman in question raises quite a serious issue.—Ed.]

Chrysanthemums

Mr. W. Wells, in a letter to the *Journal of Horticulture* (Eng.), speaking of the Chrysanthemum shows he visited on his recent visit to the United States, pays this tribute to Merza: "The most noble vase of all was at the N. C. S. show in class 1, which asked twenty-five blooms of one variety, on long stems, without any supports. The first prize went to Mr. T. Proctor, gardener to R. W. Paterson, Esq., for twenty-five magnificent flowers of Merza. This was really too much to ask for a £5 prize, for it was without doubt, the finest single vase I saw in America, and would have gladdened the hearts of any Briton who could produce such a noble lot. Yes, Merza must take first place in 'Mums in America'; it easily heads the list. If Merza could be grown here as it is over there it would head the lists in England, too. It is just a solid ball of purest white, a Japanese incurved, and the best flower I saw was 9 in. either way, and stands out on a 4-ft. stem."

Named Varieties of Show or Fancy Pansies

In a recent issue of the *EXCHANGE* a correspondent mentions that Peter Brown, the big Pansy man, was interested in the fact that European growers take cuttings of their Pansy stock. This, however, only applies to named varieties. By named varieties I do not mean certain named strains such as Perret or Masterpiece, but actual named Show or Fancy Pansies, and I rather fancy that these are confined almost entirely to the British Isles.

Most of the named Pansies are raised in Scotland, where they are highly esteemed, and they must not be compared with the usual seedling strains. At one time the Show Pansy was much in vogue, the flowers of this section, all being perfectly banded by a distinct color. No smudgy markings or shadings are found in true Show Pansies. Owing to the craze for size, however, the Show Pansy, which is rather small, although perfectly circular, has fallen out largely, their place on the show table being taken by the gigantic Fancy Pansies, many of which run to 4" or so across. These named Fancies, although blotched, are of a higher and more refined type than Fancy seedlings, and they are only propagated from cuttings, which insures absolute trueness, year after year.

These named varieties are usually very shy seeders and, to do them well, one has to keep them in frames during the Winter. Dobbie & Co. are probably the biggest named Pansy specialists in Europe. T. A. W.

MODIFICATION OF COLORS IN PLANTS.—Professor H. Kraemer, in reviewing the work that has been accomplished in the control of color in plants, referred to the factors which influence the color in flowers and gave the results of his own experiments, which were begun in the Autumn of 1904, and have been continued up to the present time. Various soils were experimented with, including an artificial soil, and sand to which a special nutrient was added. The chemicals used to modify the color principles were supplied to the plants in the form of solutions of varying strength, or added to the soil in the solid form, solution gradually taking place. Probably the most striking result obtained by the use of chemicals was the production of a red color in the petals of the white Rose, Kaiserin Victoria. The red occurred in the basal portion of the petals, and was produced in the flowers of plants which were supplied with potassium hydrate, potassium carbonate, calcium hydrate, and lead acetate. Blue flowers were produced by the red-flowering form Hydrangea (H. Otaksa), growing in both sand and garden soil, when supplied with potassium and aluminum sulphate, aluminum sulphate, and calcium hydrate.—*Gardeners' Magazine*.

There is no trade medium published that begins to equal the *EXCHANGE* in giving returns to all of its advertisers. Test it for yourself.

The New England Dahlia Society

Editor The Florists' Exchange:

We notice in your last issue, dated January 1, you state that the New England Dahlia Society held a meeting in October last. We believe we corrected this erroneous statement previously and would appreciate it very much if you would kindly state so in your paper. Our annual meeting takes place Jan. 12, at Tremont Temple, Boston, and there will be a complete change of officers for this coming year. The secretary is anxious that his term expires with this meeting, and no doubt a new secretary will be chosen. NEW ENGLAND DAHLIA SOC., Boston, Mass., Jan. 3, 1910. M. FULD, Sec.

The American Nursery Company

Editor The Florists' Exchange:

The notice in your January first issue of changes in the American Nursery Co. erred in stating that the business established by Mr. Kelsey, in 1875, at 150 Broadway, New York City, would hereafter be owned and conducted by the F. W. Kelsey Nursery Co. The business so established is the property of the American Nursery Co., and will be conducted by that company at 149 Broadway, New York.

Mr. Kelsey has nothing whatever to do with said business, nor is he in any way connected therewith.

THEO. FOULK, President,
American Nursery Co.

Reducing the List of Dahlia Varieties

Editors The Florists' Exchange:

I have waited patiently for someone to comment on several points raised by your Dahlia correspondents in your issue of Dec. 11. The first point is that raised by Mr. Vincent in his query: "Who will reduce the list of varieties?" The most surprising thing to the writer is that with the immense number of new varieties introduced from time to time the list is so short as it is.

The American grower, on an average, has less varieties today than 10 years ago. I cannot agree with some that 10 varieties are enough, or with others that 25 are sufficient. I will go further and say that 100 are insufficient.

I have often been told that it was impossible to have 100 varieties each absolutely distinct from any other; in fact, a few years ago I took one of these "doubtfuls" to our trial lot, which embraced over 2000 varieties, and while, of course, the majority of these were not worthy of general cultivation, yet every one had some particular merit of its own, and there were not two in

the entire collection absolutely identical. It is this point which makes it so difficult to cut down the list.

To a Dahlia enthusiast—or, as often styled, "Dahlia Crauk"—with sufficient space, 5000 varieties are not too many; while many commercial florists confine themselves to a dozen, sometimes a half-dozen, and in one or two instances, three varieties. The point to be gathered from this is that each grower will regulate his own list to suit his own inclination, or requirements.

The only way a list can be reduced is to establish a certain high standard in each distinct class; even then it is very difficult, because it is hard to get all the good qualities in a single variety.

Here is a pointed for plant breeders: Neither size without color, nor color without free blooming qualities will warrant the introduction of a new variety, and yet thousands of varieties have been introduced with nothing to recommend them outside of size or color.

In carefully noting the comments, the consensus of opinion is that Jack Rose has made good all claimed for it by its introducer, although in one instance it is marked to be discarded—a confirmation of the remark made above that "each grower will regulate his own list to suit his own inclination, or requirements."

This same point will also be a factor on any trial grounds; there are several now, and it is really amusing to note what the different growers will say about the same variety; and while the writer would welcome a trial ground, as proved by the aid given Professor Bailey, of Cornell University, when he took up the Dahlia, in 1895, yet these trials would not be conclusive, and no originator or introducer of a new variety would be influenced by the result of any of these trials.

We have always been inclined to send out our new Dahlias for trial with a lavish hand, never fearing the result of a fair trial; and have condemned more new seedlings than all the growers trying them combined. In other words, an originator or introducer has everything at stake and absolutely cannot afford to send out a new variety without merit.

The experience given by Mr. Miller, in the same issue, is a further example of why a single trial is of no real value.

A trial ground properly carried out would be of the greatest interest and value to everyone, yet its findings and results would not be conclusive, as every conscientious grower places his customers' interests above his own, and is governed entirely by the behavior of a plant on his own grounds, tempered by the reports received from his customers.

Berlin, N. J.

LAURENCE K. PEACOCK.

Flowers from Holland

A grower in the Netherlands seeks our advice as to whether it would pay him to export cut flowers to this side. He is of opinion this could be successfully done so far as getting the blooms here in good condition is concerned, the steamers being provided with suitable cold air chambers; he knows he would have an import duty of 25% to overcome, in addition to extra freight for the cold storage.

Our reply to the inquirer follows:

Dec. 31, 1909.

"As representing the interests of our own home growers, our natural impulse would be to use every effort to turn down any attempt at importation of cut flowers as, could this be successfully done, it would tend to the injury of the home trade.

"For that reason we have always opposed the export of cut Lilies from Bermuda at Easter time, and succeeded, some years ago, in putting an end to the greater portion of this traffic.

"Apart from our natural opposition to the proposition, however, underlie certain facts which should discourage any of the Netherlands growers from the attempt.

"For instance: Many growers throughout this country, for the Christmas season just past, 'pickled' or held back their blooms in cold storage for periods of one to two weeks, expecting thereby to gain the higher prices prevalent at Christmas Day. The result was that this stock got on the market in very poor condition and the majority of it was sold for a song.

"Our conclusion is to the effect that the almost two weeks of time which would intervene between the time of picking the flowers and putting them on the market in this city would leave them in such a condition as to be unsalable, except, possibly, to the fakirs on the street. Add to this the import duty and one can readily see there would not be much in it for the consignor.

"The growers of the Netherlands now transact an immense business with this country in plants and bulbs, and it would be far better for them to endeavor to maintain an augmenting trade rather than place themselves in violent opposition to the good will of the men on this side who now grow and purchase these imports.

Yours very truly,

PUBLISHER THE FLORISTS' EXCHANGE."

Books Received

HOUSE PLANTS AND HOW TO GROW THEM. By Parker T. Barnes. Doubleday, Page & Co., New York. Illustrated. 236 pages. Price \$1.10.

A practical hand book dealing with plants which the author states are *sure* to succeed. The cultural statements are based on the author's own experience as a grower, but the experiences of successful amateurs are also embodied in the work, for the purpose, it is stated, of giving encouragement to beginners. It is to be regretted that the title is almost identical with that of another work on the same lines published by the A. T. De La Mare Printing & Publishing Co. of New York, the first edition of which was issued in August, 1897, and was followed by several successful editions.

THE AMERICAN FLOWER GARDEN. By Neltje Blanchan, with Planting Lists by Leonard Barron. Doubleday, Page & Co., New York. Illustrated; 368 pages.

An entertaining volume in which after a chapter dealing with partnership between Nature and Art, the subject of gardening is treated of in a most fascinating manner. From the second chapter which treats of "Situation and Design," to the last, which is devoted to "Garden Furniture," the partnership referred to in the opening chapter is kept in the mind of the reader. The formal garden, the old-fashioned garden, the naturalistic garden, the wild garden, the rock garden, and the water garden are all graphically described and their respective beauties and advantages dilated upon; and the planting lists accompanying the descriptions are very commendable from the standpoint of judicious selection, and embody sufficient information to make a choice from the plants enumerated quite easy for the amateur. Chapters on trees, shrubs, vines, perennials, annuals, bulbs, tuberous plants and grasses are all admirably presented, and one entitled "The Rose Garden" is particularly entertaining. There are four color plates, and eighty-eight full page halftone plates in the volume.

House of Pandanus Veitchii

Anton Schultheis, grower. College Point, N. Y.

The Set Design and Its Future

Who of us would take issue to protect or encourage the further development of most of the set designs that are commonly seen at a funeral?

By set designs, I refer to such as the Gates Ajar, or to the Broken Circle, and to the Clock recalling the fatal hour, also to many more of similar portent.

Have we not all received the warning from many of our patrons?

Referring to a funeral, is it uncommon to read a notice in the daily papers, requesting that flowers be omitted, and is not the reason for such a notice often directly caused by the fear of the family (to quote them in part) "That there might be some of those hideous designs sent"? And as such they may well be termed!

We will grant that these designs have their meaning, and that all understand what is sought to be conveyed in the Gates Ajar, but the sending of flowers themselves, and our very presence at such a time, makes it clearly understood that we hope for the welfare of our deceased

Florists in good standing throughout the country can avail themselves of the advertisers' offers in this Department and accept, without hesitation, orders from their local customers, transmit same to an advertiser in these columns, and thus avail themselves of the opportunities for extension of trade which are open to all. Let your customers know you fill orders by telegraph to any part of the country.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail firms advertising under this heading are all considered by the publishers of The Florists' Exchange as being responsible, and will accept and fill orders for Flowers, Plants and Floral Designs for Steamer Orders, departing Trains, or any given point within their reach, forwarded them by mail, telegraph or telephone, in the respective districts to which their trade extends, the usual commission being allowed. While no guarantee is expressed or implied by this paper as to the satisfactory fulfillment of orders sent to parties whose names appear in this Directory, we will state that only concerns of known good standing will be admitted in this Department. The use of Arnold's Telegraph Code No. 16, a copy of which is placed in the hands of every advertiser, will greatly facilitate this interchange of business.

Eyres ALBANY, N. Y.
11 North Pearl Street

Cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Atlanta Floral Co. ATLANTA, GEORGIA
41 Peachtree Street

We cover all of Georgia and are within easy reach of New Orleans, Jacksonville, Birmingham, Chattanooga and Charleston. Retail orders placed with us will receive careful attention.

Thos. F. Galvin BOSTON, MASS.
124 Tremont Street

We cover all New England points. Retail orders placed with us receive careful attention. The delivery of flowers and plants to Boston sailing steamers a specialty.

J. Newman & Sons BOSTON, MASS.
Corporation 24 Tremont Street

Orders by wire receive prompt and careful execution. We can refer to leading florists in all principal cities. Established 1870.

Robt. S. Wilson BROOKLYN, N. Y.
Fullon St. and Greene Ave

Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders cared for from all parts of the country and delivered at Theatre, Hotel, Steamer or Residence. Tel.: Prospect 2840 and 4065.

Palmer's Flowers of Quality
BUFFALO, N. Y.
W. J. PALMER & SON, 304 Main St.

Hauswirth CHICAGO, ILL.
The Auditorium Florist, 232 Michigan Ave.

The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

JULIUS BAER,
CINCINNATI, O.
Fourth St.

Frank F. Crump COLORADO SPRINGS, COLO.
Retail Florist

Telegraphic orders will be carefully and promptly filled; personal attention given. Usual discounts allowed.

W. S. Matthews DAYTON, OHIO
Florist, 16 West Third Street

Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Park Floral Co. DENVER, COLORADO
1706 Broadway

A. VALENTINE, Pres. Orders by wire or mail carefully filled; usual discounts allowed. COLORADO, UTAH, EASTERN NEBRASKA and WYOMING points reached by express.

John Breitmeier's Sons DETROIT, MICH.
Broadway and Gratiot Ave.

We cover all MICHIGAN points and large sections of OHIO, INDIANA and CANADA. Retail orders placed with us will receive careful attention.

friend, and it is not necessary or good judgment that we should advertise that fact by presenting what at best is a poor description (it is to be hoped) of the eternal gates.

Then the Broken Circle! There need be no fear but that the family of the deceased is fully aware of its loss without any necessity on our part of a reminder, with such a design. As for the sending of a Clock! Is there not sorrow enough in the loss of a dear one, without some thoughtless person sending as a horror, a clock, with the hands pointing to the fatal hour, when that particular time was doubtless a greater strain for the family than the now deceased? I do not know the origin of any of these designs, but I am sure they have never met with enough marked approval to suggest their continuance.

They have just nosed into sufficient prominence, through the displeasure they create, to become a menace to the future of this important feature of our trade.

There is, however, no real objection to the Wreath and, in most instances, to the Cross, both of these being accepted by the most critical as a proper token of sympathy.

Being engaged in a delicate profession we must go more deeply into its art than to simply understand how to make up what is called for and its commercial value.

If it so be that the spirit of our trade is opposed to so many of the set designs of sympathy we should study the cause and, finding the reason a good one, should lend our help to correct the evil in question for the betterment of the trade.

Flowers first brought to the bier of the dead must have been but a handful or an armful, gathered and loosely laid or strewn about the casket, with the prevailing thought of relieving the bareness that must have been felt, or intended as a touch of color to suggest some warmth to the cold and colorless sight.

This beautiful practice being approved grew until limitless changes were brought about, many not worthy of a place and ever truly a danger to its future.

It is surmised that the thoughts which resulted in the creation of many of our designs are the outcome of those who could not get the most from the flowers obtainable; having no individuality in their work their bunches or clusters looked much alike.

When the cross and the wreath were made these same people properly had the same results; that is, they made the wreath or the cross always about alike, lacking artistic ability and the foresight to make changes in the same design.

It is not contended that we should not create changes in the arrangement of flowers for the funeral, indeed these are to be hoped for, though there must be developed as extremely artistic touches, lending in character, grace and simplicity.

Many florists are working to discourage the making of offensive designs, and all interested will do well to assist in further helping the cause. FREDERICK LEARY.

For "Supply" Advertisements see pages 58, 59

All advertisers in this column are provided with Arnold's Florists' Telegraph Code No. 16

Bertermann Bros. INDIANAPOLIS, IND.
241 Massachusetts Ave.

Prompt and efficient service rendered points in Illinois, Ohio and Indiana. Bertermann's flowers excel.

Jacksonville Floral Co. JACKSONVILLE, FLA.
20 Laura St.

We cover all Florida—St. Augustine, Palm Beach, Miami, Tampa, etc.; also lower Georgia. Choice seasonal flowers always on hand.

Samuel Murray KANSAS CITY, MO.
1017 Broadway

I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of reasonable varieties of flowers on hand. Wire me your orders.

Jacob Schultz LOUISVILLE, KY.
644 Fourth Avenue

Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of flowers always in stock; delivery facilities perfect.

Hall & Robinson MONTREAL, CANADA
855 St. Catherine St., West

We can fill all orders for cut flowers, designs, etc., and can ship to any city as far as Halifax to the East and Windsor, Ont., in the West.

Question Box

(7) Bugs on Sweet Pea Roots. I find lots of little white round bugs at the roots of my Sweet Peas, eating the roots and killing the plants. What is the best and quickest way to get rid of them?—Sweet Pea, Maryland.

—Try tobacco water, lime water, Aphine, Nicotinic, or bisulphide of carbon.

(8) Lilies for Easter.—Is it possible to get giganteum Lilies in for Easter that are only now coming through the dirt in the pots, and which, while not unusually well rooted, are fairly well rooted? If it is, what treatment should they have from now right along until Easter? Have the same question in regard to giganteum Lilies that are standing some three or four inches high? Also the same question in regard to Japanese multiflorum Lilies, which seem to have been from the district of Guma, and were quoted on and sold by the bulb merchant as Guma multiflorum Lilies? These Lilies were potted up in 5 1/2" pots on December 17. Can they be flowered for Easter, and if so what temperature, treatment and etc., will they require? The other Lilies that I have mentioned are in 6 1/2" pots.—C. A. D. C., Georgia.

—Would advise you to get your Lilies on the bench in a house immediately, where the temperature can be maintained at 70° night and day. The time is short and every day must count. A great deal depends on the weather, also on the man in charge. Careful watering and steady temperatures should bring results from all your varieties. Keep a sharp outlook for greenfly. Rearranging plants on the bench according to height every two weeks is found beneficial and gives every plant a chance. Put the ones most backward in the warmest part of the house. Keep temperatures about 60° at night the first few days, gradually increasing until 70° is reached.

(9) Azaleas for Easter.—Please let me know when to put in Azaleas and what temperature to keep them at to have them the week before Easter.—J. S., New York.

—As Easter comes, this year, on March 23 it will be necessary to put your Azaleas into a warmer greenhouse about February 15, according to variety. Mad. Van der Cruysen and Niebe require a trifle longer time, but for ordinary varieties such as Vervaneana, Deutsche Perle, etc., from four to five weeks will bring them about right. Keep tops of plants well syringed, in order to have flowers develop evenly, allow a few days to harden plants off after showing color well. A night temperature of about 55° would be about right.

(10) Specimen Plant for Name.—N. B., New York.

—Your plant is *Mina sanguinea*.

(11) Violet Leaves Diseased.—I am enclosing a few Lady Campbell Violet leaves that have a disease I don't understand. Our greenhouses were not in shape to bring in my Violets until October, but they had been doing well until about a week ago, when the outside, around the edge of the leaves, began to turn. I have been picking them off but they don't seem to do any better. I am keeping the temperature at from 40° to 45°. I would keep it lower but have lettuce in the same house. Can you advise me as to the nature and remedy for this disease; if so, I shall be greatly obliged for the information?—A. W., Michigan.

—Your trouble seems to be due to too high temperature, perhaps during the recent holiday season, and from too much moisture at the roots and on foliage at night. Would advise picking off all affected leaves, and giving more air to the plants; also stirring the soil and allowing it to get quite a little on the dry side. Give your plants a slight rest for a week or so after which feed with weak liquid manure.

CANNAS and GERANIUMS

WE have as good a list of CANNAS for florists' use as can be found. Strong 2 and 3-eye divisions, Northern grown Canons, divided from the clumps, just before shipping; are far superior to stock shipped from the South. We firmly believe that Cannas divided early, packed in thin boxes and stored for weeks or months, have lost much of their vitality before the grower gets them.

Beaufe Polievine, Crimson Bedder, Duke of Marlborough, Alphonse Bouvier, Egendale, Robert Christie, Florence Vaughan, Burbank, Papa Nardy, \$2.50 per 100, \$20.00 per 1000. King Humbert, \$5.00 per 100. (Many other varieties, but the above are a few leaders).

GERANIUMS Let us have your order for GERANIUMS for immediate shipment or to reserve until you want them. Standard varieties like S. A. Nutt, Med. Barney, John Doyle, Alphonse Ricard, Beaufe Polievine, Mad. Landry, Berthe de Pressilly, Marvel and La Favorite, \$25.00 per 1000 for strong 2 1/2 in. pot plants.

Selections of 1000 in named varieties, our choice, all good sorts, \$20.00 per 1000. Tell us how many varieties you wish. Can do 50 if you want that many.

Retail Notes

THE BOHANNON VIOLET CLASP.—The attention of retailers is directed to the unique corsage bouquet clasp, originated by L. R. Bohannon, of the Bohannon Floral Co., 11 Monroe St., Chicago, advertised in this issue. This is a novelty which has already become very popular and is being ordered by all up-to-date florists throughout the United States. It is so constructed that it cannot fail to hold the corsage firmly, and so unique in design as to be an addition to the attractiveness of the bouquet. Mr. Bohannon has the names of his regular customers engraved on the holder at the beginning of the season, and this little courtesy does much to assist him in retaining their undivided patronage. The clasps can be had in both gold and silver finish, and can also be ordered in solid gold or silver. These goods are being handled by the A. L. Randall Co., Chicago, and H. Bayersdorfer & Co., of Philadelphia.

BEVILDERE, ILL.—John W. Lyon will open a retail florist store at 205 South State St.

Notes Around Philadelphia

Wm. Mahowsky, 208 W. Girard ave., reports good sales of plants and moss wreaths for Christmas and a number of cemetery orders which, however, he was unable to deliver for several days owing to the storm. He is sending a nicely decorated wall pocket calendar to his customers as a holiday reminder.

Mrs. A. Ehrhard, who was located for 15 years at 434 Poplar St., was buried the last week in October. Mrs. Ehrhard was very well known by the local trade. The business at present is conducted by her daughters who, however, are interested in other lines and expect to dispose of the floral business in a short time.

Mrs. S. Hickman, 339 W. Girard ave., had a fine business during the Christmas holidays and found trouble in getting enough stock to supply her trade having to buy a quantity at retail in order to fill orders. The best sellers were moss wreaths and potted plants. A nice lot of funeral work is coming in and Mrs. Hickman is well satisfied with trade obtained during the few months she has been in the business.

An Educational Pamphlet

It would come under the designation of a catalog were it not so superbly illustrated—we refer to a booklet issued by the M. Rumley Co. of La Porte, Ind., entitled "Toiling and Tilling the Soil." The Rumley Co. are manufacturers of machinery for plowing, and this little work is explanatory of the manufacture of their Oil Pull Tractor, which will plow one acre of land at a cost of 75c. for three gallons of kerosene oil and, additionally, can be used for many other labor-saving purposes on an estate where either traction or belt power is required.

The Late King Leopold

King Leopold II. of Belgium had his hobbies and accomplishments. In particular, he was devoted to horticulture, and was said to be one of the cleverest landscape gardeners of his time, the proofs of his skill under this head being visible in the beautiful gardens of his palace at Laeken. Considerable abilities as an architect have also been ascribed to him, and he was said to have taken a leading part in the designing and rebuilding of Laeken after its almost total destruction by fire. Music, on the other hand, he is said to have positively disliked, and it has been told that his practice was to get up and leave the room during the lifetime of Queen Marie whenever she sat down to the piano. Of uncommon height, with a long beard, piercing eyes, and a prominent nose, the king was possessed of a queer personality. In the park and woods at Laeken he would walk for hours, tiring out even his constant companion, the late Mr. Knight, his English gardener. On one of these walks, reports a weekly paper, he sat down at a cottage door and ordered a glass of milk, talking the while to Knight in English. Having brought out the glass, the old woman living in the cottage muttered: "I wonder how much the long nosed Englishman is going to pay me for my milk?" "Do me the favor to accept a portrait of the long-nosed Englishman," replied the monarch, presenting her with a five-franc piece.

CLUBS and SOCIETIES

Florists' Club of Philadelphia

A well attended meeting of the Florists' Club of Philadelphia was held on Tuesday evening, January 4, at its regular meeting place. After the usual formalities had been gone through, a letter was read from the Gardeners and Florists' Club of Baltimore, Md., conveying resolutions and expressions of sympathy passed by that society, on the death of Wm. K. Harris.

A fine display of Stocks and Wallflowers was exhibited by Edw. A. Stroud of Overbrook, Pa., which contained the varieties Beauty of Nice, light yellow, and Empress Elizabeth, rose pink Stocks, and early Paris Wallflower, all the result of seed sown last June; it was generally agreed that these flowers are very useful to florists for forcing purposes.

Harry Gould of Wyncote, Pa., was duly elected to membership in the Club. The committee were fortunate in securing Mr. Edw. A. Stroud of Overbrook, Pa. to read a paper at the meeting on "Building a Retail Business in a Growing Community." (This paper will be printed in our next issue.)

After the reading of the paper a general discussion ensued, in which D. Rust, Geo. Watson, A. Fahrenwald, Mr. Thilow and others, took part, all adding their very profitable experiences to those noted in the paper. D. Rust spoke of the necessity of individual effort and gave it as his opinion that more of it would create a great collective interest, and benefit the community in general. Mr. Thilow entered into the spirit of the paper, and gave several interesting incidents he had met with in his recent travels in Europe. A. Fahrenwald expressed his views on the difficulty met in arousing local interest in the average American flower show, but gave it as his opinion that the S. A. F. had made a step in the right direction in giving the National show in Chicago last year and in going ahead with the contemplated one in Boston in 1911. A unanimous vote of thanks was given Mr. Stroud for his excellent paper.

The Club room committee brought a proposition before the Club to have a "ladies' night" some time about the end of the month; this met with popular approval, and was voted upon accordingly. After which adjournment was taken. At the next meeting a paper will be read by A. Fahrenwald on "The American Rose Society and its Aims."

Massachusetts Horticultural Society

The inaugural meeting of this Society was held at Horticultural Hall, Boston, on Saturday last with a good attendance.

In his address, Pres. S. M. Weld spoke very favorably of the work of the Society for the past year and urged the members to do all they could in making the large exhibitions of the coming year a success.

The treasurer's report showed the financial conditions to be better than that of any year since the new building had been occupied.

At the trustee's meeting, the donation of \$2500. to be known as the Geo. R. White fund, the interest of which is to be used in the form of a gold medal of honor to be awarded each year to that person who may have been most eminent in his horticultural work for the year, was accepted and the first medal was awarded to Prof. C. S. Sargent.

Nine life members were added to the Society's roll. A gold medal of the Society was awarded to E. H. Wilson for his exhibit of photos of trees and plants in China.

It was also voted to get out a catalog of books contained in the Library.

The following committees were appointed for the year 1910: Committee on Prizes and Exhibitions.—John K. M. L. Farquhar, Boston. Chairman; Robert Cameron, William N. Craig, J. A. Pettigrew, Charles S. Sargent, William Sim, M. A. Patten.

Committee on Lectures and Publications.—W. J. Stewart, Chairman; E. B. Wilder, W. P. Rich, Harry F. Hall.

Committee on Plants and Flowers.—T. D. Hatfield, Wellesley, Chairman; Duncan Finlayson, Peter Fisher, Thomas Roland, William Thatcher, S. J. Goddard.

Committee on Fruits.—E. B. Wilder, Chairman; J. Willard Hill, James Wheeler.

Committee on Vegetables.—Josiah B. Shurtleff, Jr., Revere, Chairman; John W. Duncan, George D. Moore.

Committee on Gardens.—Charles W. Parker, Boston, Chairman; T. D. Hatfield, J. B. Shurtleff, Jr., Wm. Nicholson, Arthur H. Fewkes, Julius Heurich, Wilfrid Wheeler, F. E. Palmer, Wm. E. Rich, Thomas H. Westwood, A. F. Barney, Jas. Bowditch.

Committee on Children's Gardens.—Mrs. R. G. Shaw, Wellesley, Chairman; Mrs. Katherine P. Peabody, Mrs. Dudley T. Pickman, Mrs. E. M. Gill, Mrs. John E. Thayer, Miss Margaret A. Rand.

Committee on Library.—C. S. Sargent, Chairman; Geo. B. Dorr, C. S. Minot, E. B. Dane.

F. E.—Best Advertising Medium

Catalogs Received

W. W. RAWSON & CO., Boston, Mass.
—Special 1910 Price List for Market Gardeners. Illustrated.

JOHN PEBB & SON, West Norwood, London, S. E., Eng.—Spring, 1910. Catalog of their Roupell Park Nurseries. Vegetable and Flower Seeds, Bulbs and Flower Roots.

MISS C. H. LIPPINCOTT, Hudson, Wis.—A neatly arranged List of Flower Seeds, together with a Special Selection of Plants and Vegetable Seeds. Prepared particularly for the women of the household. The covers are in colors.

T. R. WATSON, Plymouth, Mass.—Trade List, Old Colony Nursery, Spring, 1910. Comprising Deciduous Trees and Shrubs, Wild and Climbing Roses, Vines and Climbers, Evergreens, Herbaceous Perennials, Standard and Small Fruits.

W. W. RAWSON & CO., Boston, Mass.—Rawson's Florists' Book for 1910. Wholesale prices of Seeds and Bulbs for Spring Planting for 1910. Prepared especially for the florist trade and embracing several novelties offered for the first time.

W. E. MARSHALL & C., New York. Annual Spring Catalog, 1910. A full list of Vegetable and Flower Seeds, including Novelties in Flowers and Vegetables. The front cover is adorned with a representation of an improved Branching Asparagus, the back cover shows a realistic looking variety of Wax Bean.

CALIFORNIA NURSERY CO., Niles, Cal.—Price List, 1909-1910.—This catalog represents the 25th edition, and the claim is made by this Company that their nurseries are the most complete on the Pacific Coast, with shipping facilities unequalled both for domestic and foreign business. The catalog embraces, naturally, those stocks which are mostly called for in California and adjacent territory, and the listings are very complete.

J. ROSCOE FULLER & CO., Floral Park, N. Y.—Garden Annual, 1910. An illustrated catalog of Flower and Vegetable Seeds, Bulbs, Plants, Shrubs, Fruits, etc. Covers in colors, the front illustrating Fuller's Giant Flowering Peas, the back, a reproduction of Large Flowering Sweet Peas. Several Vegetable Novelties are listed: Tomato, Early Long Island; Fuller's Giant Rhubarb; Fuller's New Pineapple Flavored Strawberry, etc.

TEXAS SEED AND FLORAL CO., Dallas, Texas.—Texas Brand Seeds and Supplies for 1910. Novelties and Specialties, Farm and Garden Seed, Flower Seeds, and Bulbs are all given prominence with special reference to Southern conditions. Cotton Seed and general seed supplies for the Southern farmer and large grower have been particularly cared for. Tools and Implements, Fertilizers, Poultry Supplies, etc., are shown in large stock.

GERMAN SEED AND PLANT CO., Los Angeles, Cal.—This is their 39th Annual Catalog and bears evidence of the large trade which has been worked up by this Pacific Coast house. Vegetables, Farm and Flower Seeds, adapted to the California and Western Coast States are listed, as are also Palm and other decorative plant seeds. In plants a full line is catalogued from Bedding to Nursery Stock, Fruits, Small and Standard and an inclusive stock of Garden Requisites, Tools and Implements, with a Poultry Department completes this summary of a very serviceable Planter's Guide. The covers are in colors.

WALTER P. STOKES, Philadelphia, Pa.—Stokes' Standard Seeds, 1910. This is a well printed and thoroughly illustrated catalog of some 80 pages and includes a choice selection of Flower and Vegetable Seeds and Farm Requisites, including Seed Corn, Seed Oats, Ensilage and Fodder Corns, Seed Barley, Spring Wheat, Potatoes, Soling Lawn Grass Seeds, Lawn Requisites, Spraying Devices, Poultry, Pigeon and Bee Supplies. Some eight pages are devoted to a listing of Stokes' Novelties and Specialties for 1910. Interesting oddities in the Vegetable line, occupy a full page, illustrated, and three pages are devoted to a classified and ready reference listing of Stokes' Standard Seeds.

H. G. HASTINGS & Co., Atlanta, Ga.—Spring 1910. The plantation, farm and horticultural interests of the South are well delineated in this representative Southern seed catalog. It is a positive picture. Cotton seed is in a prominent position. Hastings & Co. paying particular attention to this feature. The interest taken in this staple is evidenced in the preparation of the front cover, which by means of a colored illustration skillfully depicts the habit of the cotton plant, showing the boll and the picking. The back cover demonstrates the extent of another Southern industry: Watermelons—presenting a collection, also in colors, of four varieties, Alabama Sweet, Hastings' Tinker, Florida Favorite and Rattlesnake. This firm makes the claim that it is the first and only seed house in this country to establish a Department of Scientific Seed Breeding, which is in charge of Mr. D. S. Starr, a graduate of the State College of Agriculture of Georgia.

WEBER & DON, New York.—Garden, Farm and Flower Seeds, 1910. The old and well established seed house presents its annual catalog in attractive shape, as usual; a new departure this year is a

AZALEAS IN BLOOM

A. T. De La Mare Pty. & Pub. Co., New York.

THE FLORISTS' EXCHANGE

January 8, 1910

cover in two colors which adds considerably to the attractiveness of the catalog. A plain but effective lettering distinguishes the front cover, and on the back cover is a very pretty lawn scene, representing the value of the grade of Central Park Lawn Grass sold by this firm. Sixteen pages of the forefront of the catalog are devoted to Weeber & Don's Specialties in Vegetable and Flower Seeds, naming the Vegetable Seeds the Don's Tomato for extra early forcing, Don's extra early Sweet Corn, W. & D's First and Best Cautiflower and "Seth Low" Muskmelon. In the Flower Novelties and Specialties Selection are the Giant Orchid Flowering Sweet Peas, Superb Varieties of Asters, Special Merit occupy a prominent position, considerable space also being given to the listings of Select Dahlias.

THE NEWBURY, Mitchell, S. D.—The Mitchell Nurseries and Greenhouses.—From far off South Dakota comes to us a 48x74 booklet, bearing the above caption and containing 44 pp. of first-class information, much of it written expressly to meet the climatic conditions of that State. The firm is engaged in both greenhouse and nursery work and, for that reason, is enabled to offer practically everything required by the planter or flower buyer, from a box of Panicles to a shade or fruit tree. This bright little catalog, to which we may have occasion to again refer, is one which interests us highly, not only as pointing the way to building up a remunerative business but as evidencing the fact that the members of the firm do not neglect the selling end, which is equally as important as the growing end, and it is a model little work, giving customers just the amount of insight into the florist's business they should have—and no more. Hundreds of brother growers could issue catalogs built on similar lines to their great personal and financial benefit.

CHAS. H. TOTTY, Madison, N. J.—Chrysanthemums and other plants for 1910. This is the Chrysanthemum Catalog issued by Mr. Totty under the new arrangement with Mr. Wells of England, covering the dissemination of the Wells-Pocket varieties, whereby the American exhibitor can obtain his varieties at the same time as the European exhibitor, and thus save one year in time. In addition to the various customers delivered, which has been the cause of the loss of practically two-thirds of the varieties imported. The Special Wells-Pocket Set for 1910 embraces the following varieties: Mrs. David Syme, Mrs. W. A. Read, Mrs. R. Luxford, Howard Gould, Miss Finch, Rose Ellis, Miss Edith King, Kara Dow, W. Wood Mason, Alice Lemon. There is also listed the Wells-Pocket Set for 1909; additionally, Mr. Totty's and other growers' novelties for 1910, together with last year's novelties, as well as all the standard varieties. A selection of Early Flowering Hardy Perennials Chrysanthemums is included also a list of select Carnations, Roses, Pentstemons and Miscellaneous Plants.

J. BOLGIANO & SON, Baltimore, Md.—This house, having been founded in 1818, in their 1910 Catalog, now before us, presents an accumulated experience of a continuous business of 92 years. The present book bears a handsome front cover, showing the home of Washington at Mt. Vernon, and on a good looking lawn in front thereof is a representation of their I. X. L. Tomato in very natural color. The back cover is also in colors, representing a number of the specialties of the firm. The inside listings of Seeds are given, with very full descriptions, and the varieties covered are on the orthodox lines of a large seed trade catering to the farmer, the horticulturist and the amateur. Considerable space is given to horticultural requisites, and particular attention is paid to Tomatoes, of which several named sorts are fully described and illustrated, principal among them being My Maryland, which the originators claim as "King of them All," and of which they say that "side by side it has produced three times the crop given by the Stone or New Century; it has even doubled the yield of the Greater Baltimore Tomato," one of their most favorably known varieties.

CONARD & JONES CO., West Grove, Pa.—This well known firm is sending out a Catalog for 1910 fully in keeping with their reputation of carrying one of the largest and most complete Rose stocks in the country. In the present instance some 47 pages of closely printed and well illustrated matter is given over to that one subject. On pages 46 and 47 of the catalog will be found a complete index to the "Best Roses in America," which will be found very helpful to the planter. None the less celebrated are they for their Pedigree Cannas, many of these the hybridization of Chrysanthemums, the vice-president of the Company, and several new varieties of which are listed for the first time. Additionally, the catalog embraces a full line of Hardy Ornamental Shrubs, Climbing Vines, Hardy Perennials, Peonies, Tender Climbing Perch and Parlor Plants, Chrysanthemums, Asters, etc. The front cover carries a representation in colors of the Rose, W. R. Smith, recommended as one of the best sorts for outdoor planting; the back cover conveys a representation in colors of the firm's 1910 "Reputation Set of Roses." On the second inside cover is a very handsome halftone of Frau Karl Druschki

Rose, classed as the "White American Beauty," and on the third cover a plate of the new Canna originated by the firm, Rosea Giganta, carrying a rich rose pink flower of giant size and the plant a prodigious bloomer.

ARTHUR T. BODDINGTON, New York.—Boddington's Garden Guide, Spring 1910. This representation of one of New York's leading seed houses comes to the desk replete with good things. Sweet Peas are featured extensively, and much to be commended are the large, life-like illustrations of these flowers, to which no space has been denied. The first nine pages of the catalog carry a listing of the Novelties in Sweet Peas for 1910, in which is included a short history of the Sweet Pea and a few hints on their successful culture. Flower Seed Novelties and Specialties, introductions of 1908 and 1909, and for 1910, follow, after which comes the rest of the list of Boddington's "Quality" Seeds. Considerable space is given to Novelties and Specialties in Vegetable Seeds, prominent among which are descriptions and notes on cultivation of Boddington's English Grown Peas, superbly illustrated; then follows a full list of Buds from unusual plants, generally "Quality" Roses are given quite a department; Chrysanthemums and Carnations are then named and described, followed by a classified list of English Pot-Grown Vines, Peaches, Nectarines and other fruit trees, cultural directions for which have been written by Wm. Tinner, entitled "Fruit Trees under Glass." We notice in the catalog that Mr. Boddington offers a challenge silver cup, valued at \$50, for a collection of Sweet Peas, 25 varieties, to be competed for at the forthcoming 1910 exhibition of the National Sweet Pea Society of America. The front cover was designed and drawn by Harry A. Bunyard, and is an idealized representation of Dimorphotheca aurantiaca, the Orange Daisy, a novelty which seems to have "caught on" the 1910 catalogs with considerable tensify. Many of the illustrations in the Boddington catalog are of unusual value, and for many of these the publisher gives credit to Sutton & Sons, England.

Calendars, etc., Received

THE AMERICAN CARNATION

Price, \$3.50

A. T. DE LA MARE PTG. & PUB. CO. LTO.

Carnation Dorothy Gordon

This wonderful new Carnation—a seedling of Lawson on Enchantress—is a money-maker for the commercial grower. It possesses all the strong points without the weaknesses of the parent varieties. Its unusual size—averaging three inches in diameter—clear, rose-pink color, strong constitution and excellent keeping qualities, commend it to all enterprising growers—together with the fact that it has regularly produced double the profits of Enchantress.

The Success of the Year

Visitors at our establishment and propagators who have given it a trial, speak of Carnation Dorothy Gordon in terms of the highest praise. We offer strong rooted cuttings of this splendid Carnation at the popular price of \$10.00 per 100; \$75.00 per 1000. Orders are being booked daily and will be filled in strict rotation. Don't delay, but get in your specifications NOW. Come to Wyncote and see it growing—it's a great sight. If you cannot do that, write for full particulars.

Most Profitable of All Carnations

NEW CARNATIONS

The two prize winning introductions of the Cottage Gardens.

MRS. C. W. WARD

MRS. C. W. WARD is a perfectly formed flower with full center; color deep pink several shades lighter than Lawson, deeper than Winsor; having strong, erect stems 24 to 36 inches in length. A vigorous, healthy grower and has never shown disease of any kind.

AWARDS

Society of American Florists, Silver Medal, Boston, 1906; The Craig Cup for Best Seedling, Philadelphia, 1906; The Lawson Bronze Medal, Washington, 1908; The Horticultural Society of New York Silver Medal, Sweepstake prize for best 100 blooms, New York, 1909; The Horticultural Society of New York Diploma, for best new variety, New York, 1909.

PRICES FOR ROOTED CUTTINGS

\$2.00 per 12, \$12.00 per 100, \$100.00 per 1000, \$95.00 per 1000 in lots of 2500. 25 at the 100 rate, 250 at the 1000 rate.

ALMA WARD

This beautiful Carnation is pure white except during dark weather when it shows delicate splashes of pink similar to the Cattleya Orchid, increasing its popularity.

ALMA WARD is the largest and most fragrant Carnation ever grown, producing perfect flowers $3\frac{1}{2}$ to $4\frac{1}{2}$ inches in diameter on strong, erect stems 36 to 42 inches in length.

AWARDS

The Lawson Silver Medal, Toronto, 1907, (No Gold Medal having been awarded); The Lawson Gold Medal, Washington, 1908; The Society of American Florists' Silver Medal, Washington, 1908.

PRICES OF ROOTED CUTTINGS

\$3.00 per 12, \$5.00 per 25, \$9.00 per 50, \$15.00 per 100, \$35.00 per 250, \$65.00 per 500, \$120.00 per 1000.

Delivery February 1st. January Cuttings all sold.

These varieties bring from \$2.00 to \$4.00 per 100 more than any other Carnation sold in the New York market.

COTTAGE GARDENS CO., Inc.

Columbus, O.

Local florists are much elated over their holiday trade, its volume being larger than that of any previous year. While there was plenty of stock of most kinds to go around, the prices obtained were very satisfactory.

American Beauty Roses were, of course, the star attraction, and were sold as high as \$16 per dozen, other Roses having a large sale at \$1 to \$6. Poinsettias also sold freely at \$3 to \$6 per doz., and Violets went off lively at \$3 per 100. Carnations were in large supply, and fine quality and held up well at \$1 to \$1.50 per doz. Lily of the Valley brought \$1 per dozen, and bulb stock about the same. For Azaleas \$2 to \$3 was charged; Gloire de Lorraine Begonias brought \$1 and \$1.50, and Cyclamens \$1.25 each.

One novelty was a lot of Chrysanthemums, carried over by one of the green-houses, and which came in good play at \$3 per doz. A better plant trade than usual is reported. C. D. B.

Kalamazoo

A closer examination of the holiday trade shows that while there was undoubtedly an increase in the volume of business done, the percentage was about in accordance with the expansion of glass area and population in this vicinity. While this is to a certain extent encouraging it would be more welcome to be able to note an increase of the amount spent among the customers and a still larger proportion of new ones. Prices also seemed to have reached about the limit our townspeople care to pay for cut flowers, although comparatively little kicking was done.

Plant trade averaged very good all around, while perhaps the trade in greens was a little smaller than usual. I am also told that Holly obtained from a local fruit commission house excelled the product of the regular florist supply houses.

Business during the present week continues brisk; quite a lot of small entertainments were given and, in addition, the annual Charity Ball also called for goodly amounts of flowers.

Business conditions at the present time seem most favorable for a continuation of good business; a better climatic condition also prevails which promises an increase of the cut of Roses and Carnations. The weather throughout December was probably the roughest and coldest we have had in nearly 20 years, but the New Year starts out very much better.

H. A. Fisher is again back at work after a sharp spell of sickness. S. B.

Darby, Pa.

The Darby Flower Shop reports excellent trade during the short time it has been opened. Christmas trade was brisk, large quantities of green goods were disposed of and great difficulty in getting sufficient supplies was the only drawback to a really fine finish. Funeral work is running along nicely. Another house will be finished in short time in which they will grow Spring stock. P. M. R.

St. Louis

The Florists' Club meeting, next Thursday, Jan. 13, will be an important one for its members; it will be the first meeting in the new year. President Windler and the trustees will spare no efforts to make this one of the largest meetings of the year, and Frank Fillmore says he will be ready with his paper "The Troubles of a Grower." An interesting meeting is looked for.

Mr. and Mrs. H. G. Berning are surely having sorrowful times during the holidays. Only a week ago Mrs. Berning's mother died, and the funeral took place a day after Christmas, as reported in the last issue of the EXCHANGE. A few days before the new year came in Mrs. Berning's father died, aged 63, after a long illness. He leaves two daughters, Mrs. Berning and Emma Bruening, and a son, Otto Bruening, who are employed in Mr. Berning's wholesale establishment. The funeral took place Dec. 31 from the residence of H. G. Berning, his son-in-law. The entire trade extended their sympathy to the bereaved children.

Some of the local florists, who had their first Christmas business to report, say they did well. Otto Sanders, of the downtown district, says his was far beyond his expectations.

Christmas was not so good for the cemetery florists, the weather being too bad, but on New Year's Day they made up for lost time and quite a business is reported from that district.

It has been reported that Wm. Bonche, reputed an expert landscape gardener, will soon visit New York with plans to lay out a big estate there. Mr. Bonche thinks that the East has bigger fields for his kind of work. ST. PATRICK.

Landscape Gardening

A New Course at the Pennsylvania State College

Those who are interested will be glad to learn that the School of Agriculture of the Penn. State College has recently adopted a four-year course in Landscape Gardening. The outline of the course indicates that it is characterized by the same care in the consideration of the relative proportions of theoretical and practical treatment of each subject as is common throughout the courses offered by this institution. During the first year and a half, the studies are confined to the general scientific subjects common to all courses. At the middle of the second year, however, specialization begins and is continued throughout the remaining two and a half years. This takes the form of six one-semester subjects in architectural, mechanical and freehand drawing; four one-semester subjects in engineering; four in horticulture; four in landscape gardening; one in forestry. Drawing is given partly in the School of Engineering, and partly by the Department of Industrial Art. The subjects in horticulture, landscape gardening and forestry, are given in the School of Agriculture, and surveying and general engineering are given by the School of Engineering.

This course, as it is stated, is designed to "offer an opportunity for preparation to those who desire to adopt ornamental gardening as a profession." It is to be offered for the first time in the Fall of 1910. Any inquiries addressed to the School of Agriculture, State College, Pa., will receive prompt attention.

Notes

SARATOGA SPRINGS, N. Y.—Christian Dehn reports Xmas business as having been very good and results satisfactory.

WEST CHESTER, PA.—A greenhouse of Charles Swayne collapsed under a heavy weight of snow on December 26. It was planted to Sweet Peas and a crop was just coming on.

WONDSOCKET, R. I.—Thomas H. Greene has purchased the Summit greenhouse from Jonas Brooke, and will continue the business. Mr. Greene was formerly proprietor of the Greene Flower Store.

NEW YORK.—While the cut flower market after the Christmas and New Year holidays is usually dull, it is particularly so this week. The severe cold of Tuesday and dark dull weather of Wednesday had considerable effect on the demand, although it did not seem to affect the supply. As a result there was a congestion of stock and on Wednesday night ice boxes were filled to the uttermost capacity and enough stock was on hand to supply the ordinary needs of the market for a day or two.

Roses are in very heavy supply. Killarney is more abundant than any other variety, due, presumably, to several of the larger growers being on crop. Prices in consequence have receded considerably. American Beauty is plentiful. In the pink varieties Bridesmaid is perhaps the shortest in supply, which strengthens it somewhat in value. Richmond holds its own fairly well. The quoted prices of all roses represent Wednesday morning's values, but before night, and early on Thursday, efforts to effect a clean up made bargain transactions general on anything but the best grades.

Carnations have accumulated until the very best grades on Thursday morning could be had in quantity as low as \$3 per 100, and in job lots even lower. With the stocks available the commission men were not inclined to reject any reasonable offers.

Bulbous stock is now coming in freely, single Daffodils being very prominent and selling at \$3 downward. A few Tulips are arriving but do not excite much interest, stems being quite short; \$3 per 100 is about the top price.

Lilies hold their own fairly well, the best moving freely at \$15 per 100 flowers. Lily of the Valley is plentiful but drag in movement at \$2 to \$4 per 100. Callas are not over plentiful and meet a good demand at \$1.50 to \$2 per dozen. Orchids are in supply much greater than the demand, and sales are not as brisk as a week ago. Prices, however, have not changed materially, and the cut is shortening up, a condition which should soon strengthen values again.

Violets are down to 75c per 100 for the best, with a prospect of a still lower figure before the end of the week. The demand for them is not great, and quantities are held over each day. Sweet Peas have declined a little and any but the best flowers drag considerably.

Stevia is in good demand and the market is not as full supplied as it might be. Green stock is not overabundant and sells well, particularly Asparagus.

PHILADELPHIA.—The cut flower market has again faced its normal state, and since the holidays warm weather has prevailed and all lines have become very plentiful. American Beauty Roses have taken a decided drop, and 50c, for top grades is the rule. Other grades suffer accordingly, many of which are offered on the street at 25c, each by the fakirs. Tea Roses of all kinds are of exceptional quality, and realize fairly good figures. Richmond, My Maryland and the two Killarneys are in the lead, with a range of prices from \$4 to \$12 according to grade. Bride and Bridesmaid are very plentiful and top grades realize \$10, but little demand.

Carnations in all varieties are plentiful, Enchantress and Winsor being prime favorites, and bringing good values for first-class flowers. The range of prices for standard grades is from \$2.50 to \$5 per 100, a few novelties reaching \$6 to \$8. Quite a few left over flowers are reaching the street men, who peddle them at 25c., per doz.; the warm weather, of course, permitting these sales.

Lilies are not quite so plentiful, and there has been a good demand for them for funeral work, although prices have not been very high, but a general clean-up at \$12.50 per 100 has been the rule.

Lily of the Valley has seldom been seen in such large quantities as at the

present time, and good grades are hard to move at \$3. There has been but little actual call for it, and delayed shipments arriving simultaneously created somewhat of a glut. Some clean-up sales were made at \$15 per 1000.

Orchids move slowly, and seldom go above the 50c. mark. Plenty of all varieties are on hand, with but little call for them. Gardenias apparently drag, so many are being received. Good grade flowers average 35c, each, other grades anywhere from 5c. up.

Daffodils are arriving more steadily and meet with some popularity; they sell for \$3 to \$5 per 100. Prices of Narcissus fluctuate from \$1 to \$3 about every day; the demand for them is spasmodic, and heavy shipments are constantly coming in, leaving but a small chance for a general clean-up. Good grades of Adiantum reach \$1.50 per 100, while Asparagus of all kinds is very plentiful. Efforts are put forth to maintain a respectable price on this article but they are of no avail.

Violets clean up well at \$1 to \$1.25 per 100 and several frozen shipments helped considerably to clean out the good flowers. Sweet Peas are in good demand; white and pink are most plentiful, but lavender shades bring higher prices. White Lilac is seen more frequently and at \$1 per doz. flowers finds ready sale. Mignonne, Daisies and Stevia are still popular, and meet with a good demand.

BOSTON.—There have been few changes during the week in the flower business; prices have kept fairly steady and the quality of flowers has been good.

Roses are selling very well; of course, prices are lower than a week ago, but good prices are realized for the better grades. Carnations sell well, especially colored varieties.

Violets, although plentiful, are very much in demand. Sweet Peas are in fair call.

In Orchids, Cattleyas are more in demand than any of the others; in fact, Cypripediums have been draggy part of the week.

Lilies are more plentiful than they have been. Lily of the Valley remains steady.

Bulbous stock is more plentiful, although the best grades sell well.

There is a good demand for greenery of all kinds. H. U. B.

ST. LOUIS.—New Year's trade was nothing rushing; still, a good bit of business was reported. The day was a big contrast as against Christmas; it was more like a July day. Unlike Christmas, with the zero weather which kept the people off the streets, this day brought them out, and that made trade worthy, especially in the fashionable district, where dealers say that New Year's business in cut flowers is looking up again and will, in a few years, be back to the time when this day was classed among one of the best during the year.

There was plenty of stock at all the commission houses, with prices nearly 50 per cent. lower than at Christmas, for same quality of stock.

The general run of stock seen is of good quality. American Beauty Roses are down to \$6 per doz.; for other Roses, such as white and pink Killarney, Richmond and Bride, the top prices for extra select is \$8 per 100 and down as low as \$4. Carnations sell well at \$4 to \$6 for extra fancy stock; other grades are down to \$1 to \$3 per 100. Violets were not plentiful and sold for \$2 per 100, extra fancy Californias and doubles are same in price.

All bulb stock consignments are quite heavy, at cheap prices. Harrisii Lilies and Callas are scarce; so are Freesias. The demand for Lily of the Valley is good. As quite a few fashionable weddings and receptions are reported for this week these should work off considerable high grade stock.

CHICAGO.—Again the week has opened with snowstorm after snowstorm and at this writing a genuine blizzard is raging and the outlook is for continued storms. Owing to these conditions stock is shortening up to such an extent that there is no more than meets the demand. A shortage of white flowers has tended to boost the price of white Roses, and Bride has advanced in price over other sorts. At New Year's everything was cleaned up in good shape, and prices averaged those of a year ago in nearly all lines. Business at present is in a normal condition. American Beauty Roses can be bought at \$4 and \$5 per dozen for the best with other grades accordingly. The greatest demand is for medium and short stemmed grades of which there is a scarcity. Killarney, Bridesmaid, Richmond and all Roses of the season are coming in in good form, if not so plentiful as last week.

Carnations are in excellent shape, and the fancy grades are commanding \$4 and \$5 with poorer quality obtainable as low as \$2 per 100; white sorts move off rapidly.

Lilies are more plentiful and prices have dropped perceptibly. Flowers are selling today at \$1 to \$1.50 per doz. Callas can also be had in greater quantities at about \$1.50 per doz. Lily of the Valley is decidedly scarce and all good sprays readily command \$5 per 100, poorer grades \$4.

Paper White Narcissus is coming in better and in larger quantities, the best is easily disposed of at \$3 per 100 and down. Violets are not meeting with their usual demand, although they are fine in quality. Sweet Peas are coming in more plentifully and are disposed of without any trouble. A few Tulips are to be seen around the market, with Daisies, Candytuft, Panicles and Mignonne, but the prices are not quotable. Green stock has come to the front again and is much more sought after especially Smilax.

Cincinnati

The holiday business just passed was the greatest ever experienced in the history of Cincinnati. Very little stock was subjected to the picking process, the quality of goods was certainly fine, and no complaints offered. Long stemmed American Beauty, for the first time in the history of this city, was a little hard to move at \$12 per doz., but several hundred nevertheless were sold at this price. Other Roses sold at sight, and while we were a little short on some things, never were we unable to fill our orders so completely at this season.

New Year's trade has been very good, the market cleaned up here at almost Christmas prices, with the exception of American Beauty, which dropped to \$6 and \$8 and, at the present writing the long stemmed sorts are moving a little slow at \$5 and \$6. All Tea Roses clean up daily. A great many more of Richmond could have been used if obtainable.

The holiday season as a whole has never been equalled for good business.

We regret to announce the death of Mrs. Chas. J. Jones, Sr., mother of Chas. J. Jones, Jr., which occurred at her residence in Newport, Ky., on Jan. 3. The date of the funeral has not yet been announced but, owing to the high esteem in which this lady was held, she being the wife of one of the well-known citizens of this town, and her sons florists, and their father a florist before them, the floral tributes will undoubtedly be many and of quality. Mr. Jones and his brothers and sisters have the sympathy of the craft here in this their hour of bereavement.

Monday evening, Jan. 3, a party of about 17 florists gathered at Welert's, "Over the Rhine," where a pleasant evening was spent bowling. Lunch was also enjoyed, which should be credited to Henry Balsey, of Detroit, Mich.

E. G. GILLET.

New York

Retail stores, generally, are cleaning up after a very satisfactory holiday business. Almost without exception, the florists report an excellent Christmas and New Year's trade, many finding that business for the second holiday was as good as that for the first. An enormous quantity of plants was disposed of and the plantsmen were sold out completely, consequently there is little available this week but staples such as Ferns, Pandanus, Palms and similar stock.

The greenhouses of Oscar Boehler, at Summit ave. and Du Bois st., West Hoboken, N. J., were damaged by fire, on December 30, to the extent of over \$2000. The fire was caused through an overheated boiler and had a good start before it was discovered by the night watchman.

Henry F. Reidel, a gardener formerly employed by Commodore E. C. Benedict, and well known in the seed trade here, was killed by a trolley car in Greenwich, Conn., a few days ago. Mr. Reidel, who was 65 years old, had been deaf for several years and did not hear the car or the motorman's warning.

George Hildenbrand, who was for many years employed in the store of John Young at 51 West 28th st., has gone into the retail business on his own account. He has opened a store at 3423 Broadway, between 139th and 140th sts. George's long services with Mr. Young were terminated when the latter went out of the wholesale business last month. He understands thoroughly both the wholesale and retail ends of the business, and is quite skillful as a decorator and in made-up work. He has our best wishes for success.

The Wilson-Hoyt Co. of 1 Madison ave. is hard at work interesting the trade in its cement-steel benches for greenhouses. The type of bench is a most excellent one, the construction uniform throughout, with sides in perfect alignment, not wavy as is the case with most benches. The company is now furnishing the necessary "forms," and florists may, when desired, build their own benches.

John Young had an excellent crop of American Beauty Roses in the market at Christmas and Traendly & Schenck realized good prices for them. Mr. Young has opened an office in the Child's building on West 34th st., near Broadway, and is to be found there daily. On the door, in addition to Mr. Young's own name is the legend "Office of the New York Florists' Club."

Charles Weber of Lynbrook, L. I., expects to take his new pink Carnation to the convention of the American Carnation Society to be held in Pittsburg, January 26 and 27.

S. A. F. President F. R. Pierson commenced his presidential duties January 1. He has appointed A. L. Miller vice-president for East New York, Joseph A. Manda vice-president for New Jersey, and Wallace R. Pierson vice-president for Connecticut.

This is a great month at the Traendly home in Brooklyn. The majority of the family indulge in birthdays this month.

so Frank is again confronted with the
question "What shall I buy."
J. K. Allen was unprepared for the
cold wave which came on Monday night,
and lost several fine Azalea plants.

Phil F. Kessler's store is now prac-
tically headquarters for Callas, he receiv-
ing daily shipments of excellent stock.

Billy Sampson, once one of the 28th
st. boys, came in from his farm to lead
a helping hand at the N. Y. Cut Flower
Co.'s place during the holidays.

The Greek-American Florists' Associa-
tion will hold its third annual ball at
Terrace Garden, 58th st. near Lexington
ave., on Monday, January 17. The com-
mittee of arrangements comprises M.
Rovatzas, D. Pappas, D. Carlatas, Geo.
Commatas, J. Chiotos and Th. Malan-
dreis.

John F. Sharkey, 36 E. 28th st., re-
ports Christmas trade as being excellent,
considering that his store was only seven
weeks opened. The best sellers were potted
plants and plant combinations and baskets.
Mr. Sharkey was for seventeen
years with Thomas Young, Jr., as man-
ager. The new store has an excellent
window and is tastefully decorated with
holiday offerings. The location is a good
one, in that it is near to the wholesale
flower district, and is excellent for trans-
ient trade. Herman R. Scomodau is
connected with Mr. Sharkey.

Florists' Club Meeting

The New York Florists' Club will hold
its January meeting on Monday evening
next, the 10th instant. The principal
business of the meeting will be the in-
stallation of officers for the year. The
treasurer will present his annual report,
and a report will also be presented by the
committee on entertainment for the con-
vention of the American Rose Society
next March. A very interesting para-
graph appearing in Secretary Young's
notice of the meeting is the following:
"President-elect Miller has instructed me
to say that on this evening he will ten-
der the members a 'blow-out,' and is
making every preparation to see that
everyone will have an enjoyable time
after the business of the meeting is dis-
pensd with. Don't miss it! You know
Mr. Miller does not do things in a 'half-
way' manner."

The Fleischman Bankruptcy Case

Charles L. Greenhall, as trustee in
bankruptcy of Joseph Fleischman, former
president of the Fleischman Baths and
Fleischman Floral Company, has brought
an equity suit in the United States
District Court against the Carnegie Trust
Company and others to compel them to
account for and refund all money or prop-
erty to Mr. Fleischman received by them.
It was alleged that the Carnegie Trust
Company received the equity in the Hotel
Le Marquis, 12 East Thirty-first st., val-
ued at \$150,000, rents aggregating \$30,-
000 annually, and obtained payment in
full of its debt of \$64,250, to the detri-
ment of other creditors. A petition in
bankruptcy was filed against Mr. Fleisch-
man on Nov. 30, 1908. In March, 1908,
he conveyed the Hotel Le Marquis, valued
at \$525,000, and mortgaged for \$404,000,
to the National Center Realty Company,
which he had caused to be incorporated
with a capital stock of \$60,000, but he
managed and controlled the company and
the hotel as his own personal property.
When the petition in bankruptcy was
filed against him he owed the Carnegie
Trust Company \$64,250, and when on
March 22, 1909, the Center Realty Com-
pany transferred the hotel to John B.
Moorehead, the Carnegie Trust Com-
pany's claim, which then amounted to
\$65,672, was included. Mr. Greenhall
wants Charles C. Dickinson, president of
the Carnegie Trust Company, to account
for \$1,215, and John B. Stanchfield \$17,-
802, or as much thereof as has been re-
ceived by them.

Chicago

Last week we gave a report of the week's business among the wholesale dealers. The retailers all voice the same sentiment, that they did a most excellent trade, and the possibilities are that the receipts would have shown up greater had the day itself been more favorable. The storm was so severe that pedestrians were too few and street trade that is always so well patronized on these occasions, was consequently very quiet. This was the only drawback experienced. As to what is most popular for gifts in the flower line for Christmas, all declare that nearly one-half of the sales were of flowering plants; this is attributed to the excessive advance in prices in the cut flower line at this period. With the price of a dozen Roses far exceeding that of a beautiful plant, the plant has the preference. Each year, on all occasions where flowers figure prominently, the increased demand for plants is astonishing.

Fleischman says more business than ever at this season was done and their new delivery auto-car rendered them good service for the rush. This car is of handsome design, built on the lines of an old French coach, every detail being in keeping with the pattern of the car. It

is lighted and heated by electricity. The interior is very roomy, having shelves that can be taken out and replaced at will. While there is nothing showy or flashy about the car, it looks good all through. Its color is a violet tone, with the interior of mahogany finish.

Friedman's business may be realized by the help he employed two or three days previous; twenty messenger boys on Friday and Saturday, three vans on Friday, four vans on Saturday, and four taxicabs were all kept busy. For 72 hours the store was not closed. Mr. Friedman says he managed to snatch about nine hours' sleep during this time. Plants figured largely in the business.

The Bohannon Floral Co. spent its first Christmas in its new store, and was unprepared as to what to expect. Mr. Bohannon says it would have been impossible for him to have taken care of any more business than he handled.

Mangel's business was increased greatly over that of the preceding Christmas season, as with the rebuilding of the interior of the store, resulting in better accommodations and facilities for waiting on the crowd that patronized the establishment, his proceeds could not help but be nearly doubled. Mr. Mangel has the advantage of having a long established and most prominent corner store.

Harry Rowe says that his trade was excellent and he has no complaint to make regarding weather or other conditions.

It is the opinion of J. Craig that much greater sales of flowers would be effected if the prices were more nominal, as when high prices are asked for flowers in all lines and people only have two or three dollars to lay out for them, such people resort to the offer of a box of candy in preference to the small showing of flowers obtained for the amount they can expend.

C. A. Samuelson had a good share of the holiday business, and his made-up baskets, hampers, etc., sold well.

W. J. Smyth, with his prominence in a locality where no opposition is offered him for blocks, is in command of a large trade at all times, and customers are certainly attracted to the inside of the store by the artistic display made in both windows.

The annual convention of the Illinois State Florists' Association is to be held

at the University of Illinois, Champaign, February 15 and 16.

S. Muir, likewise, is located where he commands the patronage of a flourishing and wealthy neighborhood, and one can find a most select line of all small plants in his conservatories, as well as a full line of Orchids, Violets and everything seasonable in the market.

Many of the leading florists were busy the past week with corsage work and small decorations, for parties given for the young people home for the holidays. Business did not seem to take quite such a fall as usual the week following Christmas.

The annual Midwinter flower show at the Lincoln Park conservatories is open to the public and many people from all parts of the city through the big glass houses each day. The exhibition shows all flowers of the season, but the most beautiful section is that devoted to Orchids, which contains more varieties than ever before, according to head gardener Rudolph Schiel. Some of the best specimens are from the H. G. Selfridge collection.

The sympathy of the trade in general is extended to W. P. Kyle, on account of the death of his son, Francis L., aged nine years. This was the only child of Mr. and Mrs. Kyle, and his loss will be felt exceedingly. He had been an invalid the past 3 years and his death was not unlooked for. The funeral took place on Sunday, January 2, interment being made at Mt. Greenwood cemetery.

August Boscsek, for the past twenty years superintendent of Winder's cemetery, died December 28, at his residence, 3953 North Clark st., of pneumonia, at the age of 60. Mr. Boscsek was born in Chicago. The funeral was held on Thursday, December 30. A widow, two daughters, and a son survive the deceased.

August Pierson, a resident of the city for twenty-five years, and the past seven years superintendent of Oakhill cemetery, died December 28, at the residence of his daughter, Mrs. Anthony C. Jackson, 6932 Kimbark ave., following an operation. The funeral services were held December 30.

The managerial end of Winterson's Seed Store is busy working on its new seed catalog for 1910, which it felt sure will be a winner. The Dewdrop

brand of Mistletoe which this house handled during the holidays was a great seller.

The genial H. E. Philpott of Winnipeg is spending some days in town, and will be present at the Florists' Club meeting on Thursday night, when the election of officers takes place. Mr. Philpott is the candidate for vice-president.

W. C. Johnson of E. H. Hunt's is getting ready to leave on an extended southern trip.

A new feature of the Garfield Park flower show the past two weeks, was the keeping of the conservatories open during the evenings. Mr. Sell says that while there was not as great an attendance as he would have liked to see, the show was well patronized for the holiday weeks, and he feels that it is a good idea to have the public shows open in the evening.

Oklahoma City, Okla.

Bright sunshine, and a genial warm temperature, were the weather conditions that prevailed in this city on Christmas Day.

The floral industry here is in the hands of two firms: Stiles & Co., who conduct a strictly up-to-date florist's store, and the Barteldes Seed Co., who have a downtown retail seed store, in conjunction with which they do a general trade in cut flowers and decorative plants.

The Christmas Trade

Business for the holidays was all that could be desired and, this being a somewhat new town, and developing swiftly into a large city, a decided increase in the total amount of business done, is noticed.

Stiles & Co., whose well equipped store is located at 139 West Main st., carried a superb and comprehensive line of both cut flowers and flowering plants for their holiday trade; indeed, the quality of their stock was quite a surprise to us, for this city is far removed from any large growing center, and nearly all the stock, both plants and flowers, has to be shipped over a long distance.

On enquiry, we learned that Cyclamens and Begonia Gloire de Lorraine came from The Park Floral Co., Denver, Col., and from The Stuppe Floral Co., St. Joseph, Mo.; long distances to send flowering plants, yet they were on hand in the pink of condition and, moreover, gave complete satisfaction all around. Other flowering plants handled were: Azaleas, Poinsettias, Narcissus, Roman Hyacinths and Primulas in variety. Prevailing prices in 6-in. and 7-in. pots were: Azaleas, \$3 to \$3.50, Cyclamens and the Begonias also bringing the same figures; Hyacinths and Narcissus in pans, \$2 and \$2.50 each.

In the matter of fancy pot covers or ribbons for plant adornment, there is hardly much demand along that line as yet, though the manager, Mr. Stiles, believes that the time is near when there will be found a good trade in the many little accessories that go toward putting a "finish" to a pretty flowering plant. The firm carries in stock a nice line of pot covers, mats, jardinières in metal, ribbons, and the thousand and one things that go to make up the necessary incidentals of a first-class flower store.

Decorative plants sold fairly well. Among these the chief subjects were: Kentias, Araucarias, some of the improved forms of the Nephrolepis, and table Ferns for filling centerpiece.

The cut flower trade was more than satisfactory and prices that obtained were: American Beauty Roses, \$12 to \$18 per dozen; all other Roses such as Killarney, Richmond, the Bride, sold at \$3, \$4 and \$5 per dozen, according to grade. Carnations sold at \$1.50, \$2.50 and \$3 per dozen, the red variety O. P. Bassett bringing the highest mentioned price. Paper White Narcissus brought from \$1.25 to \$1.50 per dozen; Lily of the Valley, \$1 per dozen, Violets, \$3 per 100.

Holly was handled in considerable quantities and retailed at 25c. per lb.; to the writer, this seemed a rather novel method of selling this evergreen and it

Purchasers of stock from advts. in these columns will confer a favor by making this statement in their order: Saw your advt. in the EXCHANGE.

The Mastin Automatic White-Wash and Spraying Machine is Reliable, Practical and Durable

The tank is made of galvanized sheet steel, and in brass. The pump is of brass throughout, simple and powerful. The mixing device keeps the contents of the tank well stirred up from start to finish.

When the machine is filled to within six inches of the top, a few strokes of the pump will compress enough air in the tank to produce a continuous mist-like spray for fifteen minutes.

All parts are made to gauge, and may be had for repairs.

Ask your dealer about our Extension Hose, Extension Rods, and the Mastin White-wash Nozzle for Bordeaux mixture.

Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

would seem also to be a very profitable one for the dealer. Mistletoe abounds in the woods adjacent to this city, consequently there was little demand for this so-called "osculatory promoter" evergreen, though plenty of it is collected and shipped to more northern climes, where it seems to be more needed.

The personnel of Stiles & Co. are brothers of that name, who originally came from Buffalo, N. Y. The business here has been established about ten years; besides the retail store above referred to they have a growing establishment, situated in the northwest quarter of the city, consisting of 15,000 feet of glass, under the supervision of one of the brothers. The land upon which these greenhouses are located has become very valuable, however, and it is the intention of the firm to build in the near future a larger range further removed, and cut up the land now occupied by the greenhouses for building purposes.

A member of the firm mentioned the fact that there is a great falling off in the qualities of the "Chinese Lily Bulbs." For the last two years these have proved very unsatisfactory; they grow too tall, fall over, and flower imperfectly, consequently, their orders for this class of bulbs have been cut down over fifty per cent. Perhaps some of your readers can give some explanation regarding the deterioration of this Narcissus, or may be suggest some method of culture that will obviate the troubles mentioned. The demand for these bulbs has hitherto been very good and it would be too bad to have the public at large discard them entirely.

The Fumigating Kind Tobacco Powder

All our bags have our guarantee tag on the bag, reading "Satisfaction or Money Back," and this trade mark

\$3.00 per bag 100 lbs.

It costs 15 cts. to thoroughly fumigate a house 100x25.

We sell direct to the grower.

The H. A. Stoothoff Co.
Mount Vernon, N. Y.

Detroit

Reviewing the business of last week, most all of the florists were hustling to fulfil the call resulting from society's demands and caprices. The latter are at times very irksome but at other times lead to valuable discoveries. Such was the case with Breitmeyers, when to satisfy caprices they decorated a hall with Elm branches painted with aluminum paint. Here was an extremely decorative material discovered, which lends itself to stunning effects. Unfortunately, a decorator must at times listen to the customer more than is good for the job and the highest efficacy cannot always be reached. Nevertheless, I would like to recommend a trial of this material to every florist.

Toward the end of the week counter sales increased very rapidly, with prices a shade lower than Christmas. The tumble in prices of long American Beauty Roses in the Chicago market was felt here, and the top price of \$18 per dozen a week ago came down to \$12 per dozen. All in all, the extraordinarily heavy Christmas trade had its effect on New Year's and while the difference is very small, still New Year's of 1910 was less than New Year's of 1909.

Retail Prices of Fruit

The price of fruit here may be of interest to the readers of these notes. Apples—Baldwins, 3 lbs. for 25c.; Gano, 4 bsl. for 25c.; Wine-saps, 10c. per lb., 3 lbs. for 25c.; Belle-flowers, 5 lbs. for 25c. Japan Persimmons, 10 to 15c. per lb. Pomegranates, 10c. per lb., 3 lbs. for 25c. Lemons, 10c. per doz. Oranges, 10 to 25c. per doz. Cranberries, Massachusetts grown, 10c. per lb. Grape fruit (Pomelos) 50c. to \$1 per doz. Strawberries, poorly colored because of cloudy weather, 15c. for a 10-oz. box. Guavas, two boxes of 13 oz. each, 15c. Grapes, 8c. to 10c. per lb. These are retail prices—which lead some of us to the belief that the consumer pays a handsome profit to the retailer for the privilege of buying the fruit of the land which the grower sometimes sends to the market—at a loss. To remedy this state of affairs seems no nearer solution than it was a half century ago.

A Notable Private Conservatory

Mr. Edward L. Doherty is building an addition to his conservatory, iron frame construction, the first of the kind in this part of the State. The dome will be forty feet in height and, when complete, he will have a structure seventy-five by eighty feet, with two domes the same height, heated with hot water. Just now he is planting an avenue of Cocos plumosa Palms which are twenty-five feet high—bought at Santa Barbara, an expensive undertaking. Mr. Doherty is a man of large means which he spends with a lavish hand, beautifying his place with rare plants. He keeps a collector in Central America and Mexico, making collections and adding to the long list of plants now growing here. To be sure, many subjects will be failures but, to have an enthusiast in floriculture, with the financial ability and disposition to try out novelties, is a valuable asset to any country. The full value of Mr. Doherty's experiments to southern California may not be apparent for several years—perhaps a decade. Certainly his work will add very materially to our knowledge of plant life. P. D. B.

Glassboro, N. J.

Thomas Leavesley, florist of this place, reports the effects of the recent snow storm as follows: The wind was violent; it tore up trees and broke the tops off others and the town looked as though a cyclone had struck it. Evergreen trees were down everywhere. About two o'clock Sunday morning, I heard a crash and found the sash bars on one of the greenhouses had broken with the heavy snow on the roof, making a gap in the roof 5 ft. long by 32 ins. wide, the snow falling through, with broken glass, to the Carnation beds. It looked at one time as though the roof would collapse under the weight of snow, but I managed to prop it up and saved it from coming down. My loss will reach from \$300 to \$500, as I shall have to rebuild one house in the Spring, so many sash bars being broken and cracked and the roof being all out of shape. I have two houses 20 ft. x 100 ft. and a small house 16 ft. x 30 ft. In the two large houses I have 25,000 Carnation plants and about 1000 Smilax. The small house contains Geraniums and other plants. My greenhouses are almost covered over with snow, which drifted from 7 to 9 ft. about them.

You Can't Mistake a U-Bar House

The very minute you see a U-Bar you know it is a U-Bar. It has that U-Bar light airiness about it—that nicety of detail and perfection of finish that stamps it as the finest of greenhouses. Everybody knows they can't be equalled for growing houses and that's what you want houses for. Don't make the mistake of getting a house that looks like a U-Bar; have a U-Bar and then you know you have the best house. Glad to send you a catalog if you will write for it.

New Bedford, Mass.

Christmas, 1909, was all that could be desired. Some of the florists say that it went ahead of 1908. Reports, in general, are that the plant trade was away ahead of the cut flower business, although this latter was very good. Flowering plants were much in evidence and sold well.

Roses of the best quality brought \$3 per doz. Carnations ranged from \$1 to \$1.20 per doz. retail. Violets retailed at \$2.50 per 100; these were rather scarce. Sweet Peas sold at \$1 per 100 blooms. Daffodils and Paperwhites brought 75c. per doz.; Stevia and Mignonette also helped out.

There was a fairly good call for Christmas wreaths and evergreens, prices ranging from 25c. up to \$2 each. Christmas trees sold fairly well and retailed from 50c. up.

The weather for Christmas delivery was very cold and made a lot of extra wrapping necessary. Christmas Day we had the first real snow-storm of the season, but this did not really hurt business as it came when the rush was practically over.

E. H. Chamberlain says that trade was even better than last year; he, as well as all the uptown florists, had a fine showing of flowering plants and cut flowers, and all were kept on the rush.

E. Y. Peirce is picking some nice Boston Market Carnations at his Cottage st. place. S. S. Peckham is back in harness again, Peter Davis, who had leased his place, having given it up.

The weather for the past four weeks has been very cold; at present writing it is milder.

New Year's Day made a little extra call for flowers. Roses sold at \$2 per doz. Carnations, 75c. per doz. Violets, \$2 per 100. Sweet Peas, at \$1 per 100. Funeral work is fairly good.

We wish every one a Happy and Prosperous New Year.

Visitors the past week, Mr. Bryant of A. H. Hews & Co., Cambridge, Mass.

HORTICO.

THINK THIS OVER

OUR factory has turned out more cypress greenhouses than any other factory in America. We have furnished the largest range in the world and the finest commercial plant in existence to-day. For forty years we have been in business. Greenhouses have been supplied to every State in the Union, to Canada and Mexico and to Europe. . . . There are more commercial greenhouses in the U. S. of our manufacture than of any other firm in existence. You can buy the house all complete from us, or we'll furnish any part of it. . . .

One of Fred Burki's many L & B Iron Frame Houses

THERE is something to be said against columns in a house, but there is a whole lot to be said for them. There is a structural danger line, which if you pass, you simply take chances—and mighty long chances at that. The Sectional Iron Frame Construction has the fewest columns of any safe construction. It's safe to be on the safe side. Let the other fellow do the experimenting.

FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSEYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXIX. NO. 3

NEW YORK AND CHICAGO, JANUARY 15, 1910

One Dollar Per Year

SELECT FERNS

For Fine Store Trade

We offer a grand lot of exceptionally well-grown plants of the different varieties of

NEPHROLEPIS

which will be found one of the best-selling and most profitable plants that florists can handle. Our stock is in unusually fine shape, and we will guarantee it will please the most exacting, as it is exceptionally good value at the price quoted.

Improved Elegantissima. The finest of all this type. It was introduced by us in 1905. This form of *Elegantissima* has been greatly improved, and shows no tendency to revert to the Boston, making it the most valuable fern of this type.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8-in., \$12.00 to \$18.00 per dozen—according to size.

Superbissima. Introduced by us in 1908. A very unique and distinct novelty. Its distinguishing characteristics are its dark green foliage and dense growth. Fronds are very heavily imbricated, making them very dense and compact.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8-in., \$12.00 to \$18.00 per dozen—according to size.

Bostoniensis, Piersoni, Whitmani, Scottii—Extra fine plants, 6-in. pots, \$6.00 per dozen; 8-in. pots, \$12.00 per dozen.

CARNATIONS

We are now booking orders for Carnations. Pink Delight and May Day are our leaders in new varieties. Winsor, Beacon, White Enchantress and White Perfection in quantity.

CHRYSANTHEMUMS

The best of the new ones and the best of the standards. Commercial varieties exclusively. We are booking orders for both rooted cuttings and plants from pots for February and March delivery.

OUR CATALOGUE

Contains the Carnation and Chrysanthemum lists. It includes our Rose list and the bedding stock. You need our catalogue. If you haven't received one, send for it. We can handle your order whether it is large or small.

Please mention the Exchange when writing.

GERANIUMS

Our NEW Illustrated Descriptive Catalogue will be ready for distribution January 15th. It will be the handsomest and most complete Geranium catalogue ever issued, and is free to the trade.

We are revising our mailing list and would suggest that if you are interested you send us your name on a postal card. We claim to have the largest and most complete collection in the country, and an immense stock for immediate shipment from 2-in. pots of good standard sorts, at \$2.00 per 100, \$18.50 per 1000 and up to 50 cts. each for New Varieties.

We have a splendid stock, in 2-in. pots, of the following at \$2.00 per 100:

DOUBLE LOBELIA, Kathleen Mallard; ALYSSUM, Giant and Dwarf; LEMON VERBENAS; FUCHSIAS, 6 Varieties; COLEUS, Verschaffeltii and Golden Bedder; LANTANAS, 8 varieties; IVY LEAVED GERANIUMS, 6 Varieties; SCENTED GERANIUMS.

DOUBLE PETUNIAS, mixed colors, \$3.00 per 100.

CANNA ROOTS, home grown, 1,000,000, good strong division, at \$18.50 per 1000. King Humbert, \$6.00 per 100, \$50.00 per 1,000.

DAHLIA ROOTS, whole field clumps, \$5.00 per 100 and up.

Fertilized Flower Pots

For Growing and Shipping Plants

Made of Extra Heavy Manila Waterproof Card Board. Fertilized. Wire Stitched Seams. Perfect Drainage and Shipped Flat. If you grow Tomatoes or Pot Plants you cannot afford to pass over this.

These square pots economize space, give more room to the roots than the tapering round pots. In setting out plants the pots are not removed. Simply unlock the bottom flaps and turn them up (see cut), allowing the roots to grow down.

Size Per 1000 Gross Weight
2 1/4 inch ... about 30 lbs. \$1.00 \$3.00
3 inch ... about 40 lbs. 1.50 4.50
3 1/2 inch ... about 50 lbs. 1.75 5.50

In setting out plants unlock the bottom. pull pot up one inch and you have a wall to protect the roots against Grubs and Worms.

AMERICAN SEED TRADE ASSOCIATION

President J. C. Robinson, Waterloo, Neb.; first vice-pres., M. H. Durvea, New York; second vice-pres., F. W. Bolgiano, Washington, D. C.; sec.-treas., C. E. Kendel, Cleveland, O.; asst.-sec., Leonard H. Vaughan, Chicago.

We look for the year 1910 to be the greatest in the annals of the American Seed Trade. Those who make the greatest efforts (which includes advertising in all its forms, both wholesale and retail) are likely to be most benefited.

IMPORTS OF SEEDS ETC.—Jan. 2 and 3. R. G. Goodwin's Sons, 83 bags seed; Tice & Lynch, 64 pounds seed; Maltus & Ware, 42 cases Lily of the Valley pips. Jan. 4.—H. F. Darrow, 1 case trees; A. Hollander & Co., 4 cases plants; Wakem & McLaughlin, 7 cases trees; F. B. Vandegrift & Co., 19 cases Palm seed. Jan. 5.—Perk & Velsor, 20 barrels roots; F. B. Vandegrift & Co., 1 case seeds, 1 case bulbs, 14 cases shrubs; C. W. Sheldon, 2 cases bulbs; Hussa & Co., 4 cases plants. Jan. 7.—H. F. Darrow, 15 packages seeds; L. Dupuy, 10 cases plants; H. F. Darrow, 59 cases plants; McHutchison & Co., 115 cases plants; A. Rolker & Sons, 8 cases plants. Jan. 8 and 9.—P. Henderson & Co., 1 package seed, McHutchison & Co., 91 cases Lily of the Valley pips; J. M. Thorburn & Co., 2 cases seeds; Vaughan's Seed Store, 108 cases roots; Dodge & Olcott Co., 43 packages roots.

European Notes

The most unfortunate year of the twentieth century has expired in a fit of passionate weeping, and the new year has been ushered in under the gloomiest circumstances imaginable. There is, absolutely, not a rift in the clouds, yet, buoyed up with the "hope that springs eternal in the human," we are cheerily greeting each other with the good old wish for "A happy New Year." Where the happiness is to come from it is difficult to say at present but as drowning men catch at straws so do we, feeling that nothing can ever be so disastrous again, look forward with a vague belief in better things in store.

With ever accumulating evidences of last season's disaster around us this is apparently a very insecure foundation for our faith but, anyway, it is no use crying over spilled milk.

Our disappointments are the harder to bear when we are compelled to decline orders at most unheard of prices from all parts of the globe. The trade depression is passing away, confidence is being gradually but surely restored, the money market is easier and every one wants to share in the new era of prosperity, but, where are the goods? And echo answers

where? If filling up orders do not amount to more than 10% of those received last year every store will be cleaned out long before stock taking time arrives, with the result that no early deliveries will be possible next season.

Another most disquieting sign is the temper and attitude of the growers, particularly in France. Reference has already been made to the dishonest practice of certain dealers, or agents, in connection with some of the smaller growers. Every effort has been made to trace these transactions with a view to criminal prosecution, but thus far we have not been successful. We have, however, the satisfaction of knowing that the knowledge of this watchfulness on our part has checked any extension of the practice, and today growers whose honesty has been in the balance, are advising us that their crops are now ready for delivery, that is to say such parts of them as have not already been disposed of elsewhere. Truly we have to be thankful for very small mercies.

By the way, the statement about cleaned out warehouses needs one qualification, and it is in reference to the colored varieties of Onion. The crops of these are even larger than last reported by me and many tons of the yellow Strasburg can be had for a very moderate price. The crops of those popular English sorts, Alsas, Craig, Banbury Cross and Cranstone's Excelsior, are also well on the average; purchasers would no doubt obtain them on favorable terms. Mention should also be made of Leek, but the heavy surplus of this article is due to heavy stocks carried over from last year.

The outlook for next season is far from agreeable. Just how far the growing plants will survive the trying ordeal of the present Winter it is not possible to foretell. One thing is certain at any rate and that is that while the growers remain in their present mood no half crops will be allowed to stand unless the dealer is prepared to take the entire risk on his own shoulders and pay any fixed sum the grower may demand.

EUROPEAN SEEDS.

American Notes

Just Before the Season

January is always a month of great activity with the seed trade preparing for the season that is so soon to open. Immediate sales of seeds, outside of the so-called forcing seeds, are not large at this time, but just as soon as the catalogs are well in customers' hands orders will gradually commence to be placed. On the average the seed catalogs will be somewhat later in their distribution this season than usual, owing to the very short and uncertain supplies of seeds, in so many cases, which prevented the customary early establishing of values. Then again, the seed shipments from Europe will be behind the usual time in arriving, owing to the continued unfavorable weather prevailing during harvesting, which has much delayed getting seed in proper condition for delivery. Taking everything together the seed selling season will start later than customary this year.

Spring Bulbs

It will be remembered that last season the whole list of what are known as Spring bulbs enjoyed larger sales than ever before. So great in fact was the demand for the better varieties of Cannas, Gladiolus, Dahlias, and other favorites, that long before the planting time was over many dealers were entirely out of stock. Large as were the sales in this direction a year ago, there can be no question but that still larger quantities will be needed to supply the demand that is sure to come just as soon as the season opens. Cannas bid fair to be in enormous demand; and no wonder they are so popular, as the display that can be made for a very small expenditure of money is very great to the customer. In Dahlias the Peony-flowered sorts will have a large sale; this is the new type of this splendid decorative plant that has, during the past season especially, created such a real sensation in Europe. The blooms are immense in size and borne on long stems. Every dealer should have some of these new things in Dahlias for his customers. The newer sorts of Gladiolus will also be good sellers. Every dealer should supply himself well with Spring bulbs, as their sales can easily be made very large, and they yield a good profit.

cient merit to take its place with the
recognized standard varieties. The Lady
Lenox Cosmos is a very fine novelty and
will enjoy much larger sales the coming
season than ever, as now the seed can
be sold for ten cents a packet. While it
was higher priced its sales were natu-
rally restricted. This beautiful Cosmos
has succeeded in all soils and locations;
in size it is four to five inches in diam-
eter, which makes it about three times
the size of the common varieties. In color
it is a shell-pink, and is most beautiful
under artificial light. In form the in-
dividual flowers are perfectly circular;
and very strong and long are the stems.
This new Cosmos is especially desirable
as a flower seed specialty, as no annual
at the present time, outside, perhaps, of
Sweet Peas and Nasturtiums, is more
popular than the family to which it be-
longs.

WHOLESALE SEED MERCHANTS AND
POULTRY FOOD MANUFACTURERS

BALTIMORE, MD.

New York Seed Trade Notes

It has been a cold Winterish week.
As far as trade goes little is doing, but
it will not be long now before the catalogs
start the early buyers. All our seedsmen
are striving to finish the seed packaging
just as soon as possible. The rush of
another seed selling season will soon be
here.

The Climax Manufacturing Co. of Cas-
tortland, New York, have very recently
opened an office in this city for the sale
of their florists' cut flower boxes at 20
East 42d st., with U. C. Hirschey in
charge. The sales of the boxes made by
the company have very largely increased
lately in this city and vicinity, with the
result that it became absolutely necessary
to have headquarters here.

It is a curious fact that green is the
prevailing color of the covers of many of
the New York seedsmen's catalogs.

At Boddington's the final preparations
for the coming season are being very ac-
tively pushed. The catalogs of the house,
both wholesale and retail, have been
mailed and orders are already commencing
to come in. This house has made
every effort to make the coming season
by far the largest in its history, and
everything seems to point that way.

W. A. Sperling of the Stump & Wal-
ter Co., has just returned from an ex-
tended business trip through the South
and Southwest. Mr. Sperling reports
trade conditions as very encouraging; in
fact, much improved over a year ago.

W. H. Grenell of Pierrepont Manor,
N. Y., was among the week's visitors.
Mr. Grenell confirms the repeated re-
ports that with each succeeding year it
is becoming more and more difficult
to persuade good farmers to plant acreages
of Beans and Peas for seed purposes—
that is, at prevailing rates.

William J. Fosgate of Santa Clara,
California, was also here this week. Mr.
Fosgate is making his annual Eastern
trip among the customers for whom he
grows seeds.

The Aphine Manufacturing Co. of
Madison, N. J., has arranged for a public
test of their new insecticide Aphine, to
be held at the Boston Flower Market,
Boston, Mass., on Saturday, Jan. 22.

Charles Lochner of the Yokohama
Nursery Co., who is in the Norwegian
Hospital, Brooklyn, suffering with a broken
leg is doing nicely, the bone having
been satisfactorily set.

Harry van Koolbergen, of Koolbergen
& Sliedrecht, nurserymen, Boskoop, Hol-
land, left Liverpool on the S. S. Lusitania,
Jan. 8, for his usual business trip
in this country. Mr. Koolbergen's ad-
dress is care of Maltus & Ware, 14 Stone
st., New York.

Philadelphia Seed Trade

The newspapers of the East have given
publicity enough to an unfortunate oc-
currence in the Robert Buist family, there-
fore reference in these columns is un-
necessary. We do, however, offer our
sincere sympathy and trust the matter
will soon be cleared up.

There is some activity in the different
stores in the demand for all kinds of
florists' seeds, and the issuing of the
many new catalogs is now in full blast.
These catalogs have been described at
length in our columns and, on the whole,
reflect great credit on those having their
make-up in charge.

The Moore Seed Co. has been receiving
large shipments of seeds from the West,
from contract growers.

The Johnson Seed Co. is busy handling
Mushroom spawn, Asparagus roots, and
Ruhbar roots for forcing under benches
in greenhouses. These should prove a
popular means of increasing revenue
among the florists, as there is no doubt
a market for such products all the time.

Michell's lower store at 518 Market st.
has a fine display of many kinds of pou-
ltry foods and necessities, in which a
large business is being done. At the
other store, 1018 Market st., plant and
flower seeds for florists are being sought
continuously, especially Asparagus plu-
mosus nanus seeds, of which it has a fine
supply. New Crop Asters, variety Queen
of the Market, is also another of the spe-
cialties for which this house is noted.

Direct Importations

AT FOREIGN GROWERS' PRICES

Forcing Gladiolus

Many florists plant these in boxes, or among their carnations, in the Winter. They are excellent for decorative purposes and realize good prices, either wholesale or retail. Gladiolus are a good catch crop and take up but little room. The following are the best for this purpose.

Gladiolus Gandavensis Hybrids

America. The flowers, which are of immense size, are of the most beautiful flesh-pink color. \$3.25 per 100; \$30.00 per 1000.
Shakespeare. White and rose. \$1.75 per 100; \$15.00 per 1000.
May. Pure white, flaked rosy crimson; the best forger. Selected bulbs, \$1.75 per 100; \$15.00 per 1000.

Brenchleyensis (true). Flery scarlet. Selected bulbs, \$1.50 per 100; \$13.00 per 1000. First size bulbs, \$1.25 per 100; \$10.00 per 1000.

Boddington's White and Light. Extra selected bulbs, 1 1/2 in. and up. \$1.50 per 100; \$14.00 per 1000.

American Hybrids. A mixture of the choicest varieties of Gladiolus in cultivation. \$1.00 per 100; \$9.00 per 1000.

Remember, you may deduct 5 per cent. if cash accompanies order.

Please mention the Exchange when writing.

Henry A. Dreer, Inc. is still receiving orders for Box and Bay trees for Spring delivery, the house having an exceptional stock for purchasers to select from, at its greenhouses in Riverton, N. J. The Green Mat were handled during the recent holidays, and shipped to many parts of the country, proved a popular article, judging by the number of pieces disposed of.

The Texas Seed Trade

The past year was the driest we have had in Texas for over 20 years. In this section of the State (Dallas), we did not have a rain that wet the ground over two inches in a year. So far this Winter we have had considerable snow, which is unusual for Texas, and have also had a good deal of rain and cold weather, which has put the ground in good shape, and we will probably have a bigger trade than ever this year, on account of the fact that more people will have to buy seed.

Very few people realize the enormous quantities of seeds used in Texas. Seed houses from all over the country have men in the State every year selling seeds. Of course, we have the advantage, being located right here. We do a very large garden seed business, also handle a large quantity of field seeds. For instance, last year, for one item, we sold over 100 cars of Cane or Sorghum seed. We also have a first-class trade in poultry supplies, and as we have machinery of our own we do a nice business in poultry foods.

Enormous quantities of vegetables are shipped from Texas to the North every year, and, of course, this uses large quantities of garden seeds. In field seeds, the farmers do not try to save very much, and on this account we expect to do a large field seed business. We are very busy now getting out early orders for merchants, and our new catalog is just being issued.

TEXAS SEED & FLORAL CO.

Seed Notes from Groningen, Holland

The exceedingly unfavorable weather for seed saving the past Autumn will be held a long time in remembrance by seed growers and farmers.

Different crops of small seeds never dried enough when cut to be harvested in suitable condition; flower seed crops especially gave very bad results.

Spinach yielded only a little more than half the usual quantity; fine lots are scarce.

Radish has been grown here this Summer in large quantities, and yielded better than other garden seeds, but made too rank growth. On account of the unusually moist soil the crops matured also very late, and must be put in sheds for drying, not being in condition for immediate threshing from the fields, as the seeds would not leave the pods; contract orders must wait for delivery until after New Year. With a few exceptions Borecole yielded miserably, the crops were already very thin by winter-killing; in the growing season insects did much harm. Crop of garden Beans is doubtful, not only did they yield below a medium average but most of the Beans are covered with black spots, and so are unserviceable for sowing.

A very small quantity of Mangel seed is saved, and prices will be extraordinarily high; there is large demand for Yellow Pöckendorfer, of which there is very little grown.

Some wholesale dealers have fair lots of Sugar Mangels from crop 1908 to clear, and these can easily be sold for prices far above Autumn, 1908.

The Province of Groningen becomes more and more the seed-growing district of Holland; we have the most varied soils in a short distance, from the poor sandy in Westerwolde, suited to grow Nasturtium, Phacelia, etc., up to the heavy clay soils near the Dollar, being the best seed grounds to save crops of Dactylis glomerata, Swedes and Caraway. GERARD in the Horticultural Advertiser, Dec. 29, 1909.

SEDALIA, MO.—L. H. Archibald of the Archibald Seed Store Corp., entertained the employees of the store at a turkey dinner at his home on Quincy avenue, on New Year's Day. The dinner was thoroughly enjoyed and immediately following it the host was presented with a cut glass cream and sugar set; a gift from the guests. L. A. Kipping, vice-president of the corporation, attended the farmers' meeting and corn show at Columbia, Mo., the week ending January 1.

A New Fertilizer

The D. D. Johnson Co. of Chicago has put on the market a new fertilizer, called the Evergreen Brand, which is meeting with great approbation by all who have used it for growing plants and flowers. It is endorsed by some of the largest growers in the country who have tested its merits. One, in purchasing this brand, gets the benefit of all its properties, as it contains no "filler," and the plants consume it all. The fertilizer is odorless and sanitary in every way, and therefore a very desirable article, for all purposes. It is said to annihilate all disease germs, thus preventing rot of stem and other diseases from destroying the plants. We would call the attention of the trade to the advertisement of the fertilizer in this issue of the EXCHANGE. All the seedsmen in Chicago are handling the preparation in quantities.

Plant Culture

By GEO. W. OLIVER.

Propagator to the Bureau of Plant Industry, U. S. Department of Agriculture, Washington, D. C.

New, revised and enlarged edition, fully illustrated, handsomely printed on enameled paper and bound in Vellum de Luxe cloth, 12 mo., 300 pages. Sample pages on application. Purely an American book by an American author.

The Book of Books for the Grower. Compact, concise, practical, containing all the information bearing on present day practice. You need it for yourself, for your foreman, for your men.

Morton Grove

Morton Grove, Ill., Oct. 6th, 1909.

Mr. D. D. Johnson

Dear Sir:-

We have used the 6 cans of Evergreen Brand Flower Fertilize shipped us Sept. 6th and noted remarkable results.

You may increase our second order of 500 to 2000 lbs. and ship soon as possible.

Yours truly,
Poehlmann Bros. Company.

Aug Poehlmann Sec'y

It permanently enriches the soil.

It is all available.

Contains no "filler."

The plants can use it all.

Odorless and Sanitary

It will annihilate all disease germs; thus it prevents stem rot and other diseases from destroying the plants.

The Price is Low

compared with common Fertilizers or Bone Meal, for when purchasing the **EVERGREEN BRAND** you get **PLANT FOOD**, hence eliminating the expense and handling of "filler" or "make weight" material usually found in large quantities in common Fertilizers.

It is immediately soluble in water. Can be used Dry or in Solution.

1 lb. to the 100 Square ft. of Benching

TRY IT. We have arranged to ship small quantities, as follows: Boxes containing 1, 2, 4, 6 or 8 cans each.

Cans contain 12 pounds. Price \$2.00 per can. Terms net cash with order.

Full instructions with each shipment.

AMERICAN ASSOCIATION OF NURSEYMEN

F. H. Stannard, Ottawa, Kan., President; N. P. Stark, Louisiana, Mo., Vice-president; John Hall, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., treasurer.

DOVER, DEL.—A charter has been granted to the Pen Mar Orchard Co., to sell nursery products of all kinds. The incorporators are William P. Johnston of Pittsburg, William F. Givin of Baltimore and Edwin L. Worthington of Charleston, W. Va. The capital stock is \$20,000.

Picea (Abies) alba

Our native white Spruce, *Picea alba*, is much better known as a timber tree and as a tree for Christmas than it is as a lawn tree. Old gardeners give as an excuse for its not being prominent on pleasure grounds that nurseries did not contain it when their earlier plantings were made; later planters say it fails to thrive well in cultivation. There may be something in what is said of the difficulty of procuring it in nurseries in former days, for not only the white Spruce, but the greater number of trees kept by nurserymen were of foreign kinds. It came about because that it was the custom to purchase supplies from abroad, as it is today, and foreign nurserymen had not then taken to the growing of our native trees. It is different today, as it is as easy to get seedlings of native trees as it is those of trees of other countries.

As to the white Spruce not doing well away from its wilds, the one we have photographed does not seem to be lacking in any of the essentials of a good, vigorous tree. It stands on rather elevated ground in Wissahickon Park, Philadelphia; and at the present time is in the prime of its growth.

The white Spruce is abundant in the moist wet woods of Canada, the New England States and even as far south as North Carolina, but as it gets South there is quite a difference in the appearance of the tree, just as there is in the Hemlock and other coniferous trees.

At Christmas time the white Spruce is prominent in all our large cities. It and the Balsam Fir are the two principal trees used for Christmas trees. A few black Spruce, *Picea nigra*, are to be seen, but its shorter needles, less spreading than those of the white Spruce, cause it to be called for less than the others.

The tree we photographed is 25 ft. high, and as shown it is of nice proportions. The natural height of the tree is about 50 ft. The Spruces, to which our *Picea alba* belongs, are distinguished from the Firs by their pendulous cones and their persistency in holding together. The Firs, which, for example, are represented by the Balsam Fir, have, on the other hand, cones upright on the branches, and when they are ripe they fall apart. For this reason when wanted for collections of cones they have to be tied together with thread before they mature, to secure them.

Weeping Blue Spruce Probably no evergreen became so famous in such a short time as did the Colorado Blue Spruce.

The first appearance gave to planters something different in its habit and growth from anything known before in the evergreen line, and its silvery blue foliage had never been approached by any other evergreen, nor is it today. It gives to a lawn color and style that has much to do in the formation of the beautiful appearance many of them are admired for.

These notes are chiefly to call attention to a weeping variety of this Spruce. But few are to be seen here as yet, just one or two here and there, coming from Europe, but there is no doubt of its popularity when its merits are discerned.

Berberis Japonica

Of the two varieties of *Berberis*—*Mahonia*—usually seen in collections, *B. Japonica* and *B. aquifolium*, the latter is the more frequently met with planted in masses. It grows so compact spreading, and close to the ground, that it has been used for game cover as well as for solely ornamental purposes. As individual plants or for moderate grouping, between the *Japonica* and the *Aquifolium* the *Japonica* is rather to be preferred to general planting, because of its more hardy character. *Aquifolium* comes from Oregon, where the Winters are not at all severe, and when it gets here and has to endure our hot sun and zero temperature its leaves become greatly disfigured by Spring, a something that does not happen to *Japonica*, for its lovely, large green leaves are of as bright a green color in Spring as they are in Autumn. Both species bear loose panicles of bright yellow flowers in early Spring, and as these blossoms are well set off by the foundation the pretty foliage gives them it is a pleasure to come on them in flower at that time.

If it were that the leaves of the *B. aquifolium* were made bronze colored only by the cold it would be a meritorious feature, but they are partly killed when greatly exposed, though the wood is not.

**Picea (Abies) Alba. White Spruce****Wax Myrtle for Hedges**

In Prof. Massey's interesting notes on half-hardy and other trees and shrubs, in a recent number of the EXCHANGE, he speaks of the Wax Myrtle, *Myrica cerifera*, as an evergreen that would make an excellent hedge plant. Well, so it would, but the difficulty would be in supplying plants in quantities for the purpose, and at reasonable rates. Nurserymen who have attempted its propagation from seeds have had indifferent success. A whole bed of seeds will give but a half-dozen seedlings; and even wild plants might not be obtainable of a proper size. Along the New Jersey coast, notably at Atlantic City and Ocean

City, acres of them have been destroyed by filling in the half swampy places where they grew, for building purposes. Another shrub Prof. Massey mentions, the *Prinos glaber*, is a pretty evergreen, bearing black berries. What has been said of the Wax Myrtle applies to this as well—the difficulty of getting up a supply of plants. This Holly, for it is a Holly, requires that its berries repose in damp soil a whole year before growing. Still, this would not hinder a supply, but one would need to start a good while in advance, for even after the seeds start to grow the progress of the seedlings in height is very slow. The well-known evergreen *Euonymus Japonicus*, makes a good hedge, but here we are met with a hindrance in its lack of hardiness for all but the warmer States south of Pennsylvania, and in these warmer States there can be nothing named at this time better for the purpose among plants that could be had than the several sorts of true evergreen Privets, the *Ligustrum Japonicum*, *L. lucidum* and *L. macrophyllum*. The foliage of all is handsome, the plants readily propagated, and they are in every way adapted for hedging.

Stratifying Seeds of Maples

For various reasons seeds of Maples, Ash and numerous other deciduous trees cannot always be had in time to get them into the ground before Winter sets in. Those familiar with this fact often prepare a bed before the ground freezes, digging it and raking it smooth, and then having a heap of sand under cover. When the seeds come to hand they are spread on the frozen ground, covered with a layer of sand, and, if not later than early January, the seeds will germinate in Spring. Should snow cover the beds it is to be shoveled off before sowing.

Instead of this plan, there is another which has been found to work very well. When seeds come to hand they are mixed with damp sand and placed in a cold place, even outdoors will do, there to remain until Spring opens, when they must be sown the first thing. Just how late such seeds may be kept before being stratified, as this process is called, cannot be told exactly. Last season the writer tried some White Ash seeds which had been kept dry until early in March. These were then given a soaking in water for two days, and afterward sown in a pot, the pot plunged completely under ground. But two plants came up out of some hundred seeds sown, but all the other seeds were apparently in splendid condition, plump and sound as could be, causing a wonderment why they did not sprout. Perhaps they may in the Spring coming, as they are still undisturbed. There is a something, temperature, moisture and other things, Nature seems to call for which must be on hand at the proper time, failing which seeds will not sprout.

When such seeds as have been referred to fail to come to hand until within a month or two of sowing time it will be better not to sow them with the expectation that they will grow in Spring, but hold them dry and stratify them in Spring, sowing them in the Autumn following, when good results may be expected with the return of Spring.

Sowing Coniferous Evergreen Seeds

The late Robert Douglas of Illinois was one of the leaders in the raising of evergreens from seeds, and his plan of working was, as related at the time, to prepare narrow beds, slightly elevated, to insure good drainage, sowing the seeds thereon, and then covering the beds with sash, made of lath, nailed an inch or less apart on skeleton frames. These sashes were raised an inch or two from the ground by blocks of wood at the ends, and as the seedlings grew the blocks were elevated gradually, giving more and more light and air as the seedlings required it.

Mr. Douglas raised immense quantities of seedlings, sowing the seeds very early in Spring, and to those desiring to engage in it in a like way there is no better way than his in which to undertake it.

When it is not desired to grow them in large quantities, seeds may be sown in boxes, in a greenhouse, and thousands can be grown in this way. February is a good month to sow the seeds. Sow them in flats, placing the boxes in slight heat, keeping them well shaded until the seeds germinate, and seeing that the soil is moist all the time; as soon as the seedlings are well above ground take all shade from them, or the darkness and moisture will cause fungus to attack the seedlings, "damping off" as it is called. In fact, as soon as the seedlings are above ground all the light and air possible should be given them, to harden them against fungus attacks, to which they are very liable at this stage of growth. For this reason it is well to transplant them as soon as large enough to handle, as it is seldom that fungus attacks them after this has been done. The seedlings may be transplanted closely in other flat boxes or be potted singly, as may seem most desirable.

Pines and Spruces usually have a large percentage of sound seeds, but with Firs it is seldom that all are good, therefore seeds of these may be sown closer than those of the Pines and Spruces.

It is useless to sow seeds of Junipers, Hollies and Yews at the same time with the expectation that they will grow along with the others, as they will not germinate under a year. Place them in a heap of sand, in a box, until a year has passed, then sow them and seedlings may be looked for in a short time.

AN APHINE TEST
ON
SWEET PEAS AND DOUBLE VIOLETS

Viola and
Sweet Peas
a Specialty

JOHN H. SLOCOMBE
FLORIST

555 Townsend Avenue,
New Haven, Conn., Dec. 13, 1909.

George E. Talmadge, Inc., Madison, N. J.

GENTLEMEN:—We grow Double Violets and Sweet Peas and so cannot use Cyanide after Peas are up in November. We have not yet found an insecticide that would kill green and black fly and not give the Violets spot—or as cyanide kills Peas, and tobacco spots, we would like to know what tests you have made on Double Violets and Sweet Peas. If your goods fill the bill we can use a lot of it.

Yours truly,
J. H. SLOCOMBE,

OUR REPLY

(Madison, N. J., Dec. 20, 1909.) "Replying to your favor of the 13th inst., we are today sending you a sample of Aphine that you may try it on your plants to see whether it will do the work for you. This will be more satisfactory to you than any promises we may make as to what Aphine will do. We will appreciate it if you will advise us of the results of your test."

THE RESULTS

(New Haven, Conn., Dec. 29, 1909.) "Your sample of Aphine received and tested a few days ago. It looks to us like a good thing, so we are enclosing check for \$2.50 for one gallon of same."

(Western Union.) New Haven, Conn., Jan. 4, 1910. "Ship immediately C. O. D. two gallons Aphine. J. H. SLOCOMBE."

ANOTHER PUBLIC TEST OF APHINE

Has been arranged, to be held at the Boston Flower Market, Boston, Mass., on Saturday, January 22d, 1910.

(Further particulars in next week's issue of this paper.)

If you are not familiar with the new insecticide discovery, **APHINE**, send for descriptive circular.

If your supply house does not yet handle it, write us for names of our nearest selling agents.

\$2.50 per Gallon

Used at an average strength of 1 part **APHINE** to 15 to 40 parts water.

Yale Men Knock Florists	87

At the recent meeting of the bowling club James Allan was high man with a score of 243, making 6 strikes in succession; Henry Schwarz came along with his usual 115 to 120, Gus Adrian and Max Rudolph made the same score, while C. E. Critchell, Doc. Sunderbruch, Ray Murphy and a few of the other Cincinnati professionals made scores that would win in most any of the S. A. F. conventions. It is probable that some of the other cities will have to look to their laurels or Cincinnati will walk off with a number of the prizes at Rochester next August.

Getting back to the weather proposition—during the past week we have had a snowfall of about 10 in., something that has not occurred in this vicinity before in the past 40 years; at the present writing snow is still covering the ground and the Ohio river is frozen from shore to shore.

We fear that when the break-up comes the damage to river property will run into the millions.

A letter from C. J. Ohmer states that during the present cold snap the thermometer reached 28 at West Palm Beach, Fla., where he is situated; it did not injure any of his plants but much damage was done to the vegetables and oranges through that section.

A man employed by Wm. Specht of Newport, Ky., committed suicide by shooting himself with a shot gun in the boiler room at Mr. Specht's range; no cause is given for his action.

Rose Mrs. Jardine is by far the finest pink Rose grown today. If it were only a better producer Killarney would have no show at all, but possibly it is a good thing that it is not so free as it has its own exclusive place in the market, and demands a price that you cannot get for any other Rose of similar character.

We have one florist in this city who is celebrated for the odd designs which he has been called upon to make; the first was a hand car, next a telegraph line, a Calla stuffed with Violets, while another was a reclining anchor upon a base surmounted by a double barreled shotgun. This man's name is John Walt, he maintains a florist's establishment on Eastern ave. E. G. GILLET.

FERNS

MY SPECIALTY

Boston and Scottii Ferns. 6 in., \$6.00 per doz.
Extra Large Bostons. 7 in., \$12.00 per doz.

The Week's Work

BY
FRITZ BAHR

Carnations

Three Good Commercial Varieties

I received an inquiry today as to the best deep pink and white Carnation, and as the inquirer states that he has the best success with Enchantress of all the Carnations he grows, I should certainly advise him to plant for a deeper pink than Enchantress the rose pink sport of this variety; and again for a white to try the White Enchantress. After all is said and tried these three are hard to beat. When well done they will give the novices which have appeared of late years an awful run, in their respective colors on the exhibition table, and as bread and butter varieties for the small grower they head the list in most places. Here and there we may hear of instances where there are complaints regarding split calyxes or weak stems but, on the other hand, there are growers who do Enchantress better today than it was ever done. This variety seems to have an iron constitution. When a Carnation can hold its own for the number of years Enchantress has against all the newcomers it must be good, and its sports have also proved themselves worthy. We have other splendid sorts in both the pink and white classes, but as the inquirer states that he is successful with Enchantress he won't go wrong in planting these three as mentioned. I should also reserve at least some space to give a trial to a few of the newer varieties offered, for that is, after all, the only way to find out anything about them. There is no doubt in my mind that in most cases the originator sends a new variety tried in good faith and after having tried it thoroughly, but how very few of the new comers survive when sent out into this cold world to fight for recognition and a place among the old standbys.

The Lilies

Get a Move on Those Intended for Easter

We are having the most glorious winter weather throughout the Middle West. Our thermometer registered 11 below this morning. It has been going down steadily for the last week in spite of the predictions of the weather man. Weather of this kind, and a cloudy sky, isn't at all in favor of getting the longifloras into bloom by March 20, one week before Easter. The buds show about 1/2 inch. Plants which are less than 10 inches in height ought to go to a Rose house in order to get there—by 10 inches I don't mean plants which have made that growth under some bench; stock of that kind is not fit for a temperature over 50°—but if the plants have been growing in full sunlight during last month in a temperature of about 52° and are in healthy condition, with plenty of live white roots, you can bring them to a 65° house. They won't be to early. Don't be discouraged because your plants are not over 2 1/2 inches in height; if they are healthy and well rooted and you can give them the heat necessary they will come all right—but don't delay. The most careful watching on the part of the grower is necessary, in order to avoid a lot of disappointment with the Lilies. The most important factor in this matter, so much depends on it—but to be on the safe side is to have them far enough advanced one month before Easter Sunday. Should warm sunny weather set in it won't be hot enough to keep the Lilies back. On the other hand, should dark grower prevail with a temperature of 30° or 90° will get plants with buds soon in bloom.

Easter Ramblers

Proper Time to Get the Plant Started

Whether pot grown stock is made use of, or field plants potted up last Fall, the plants should now begin to show new growth, if they are intended for Easter. Let them come along now. While the pot grown plants will not require quite as much time to get into bloom as the others, if in a temperature of about 60° now, it won't bring them too early. When Easter comes at a date near the end of March there isn't as much trouble to hold things back as there is to get there on time, and a Rose doesn't differ from other blooming plants the florist sells, which are forced into bloom; they are all benefited by a little lower temperature a few days before they go out, so while it isn't necessary or beneficial to put the Ramblers into a Rose house climate now, let the plants come along uninterrupted from this date on. Keep the wood of plants moist by syringing, especially before growth

A HEARTY INVITATION

While the Carnation is up for its Annual Review we would esteem it a favor to hear from those who grow the plants. Send in notes on your experience with Carnations in 1909; together with any suggestions or criticisms you may have to offer. Do it now. Don't wait.

commences. Apply flour of sulphur as soon as there is a trace of mildew, thereby keeping the leaves from being disfigured and to keep green-fly in check; the safest precaution is spraying with a weak solution of nicotine. The most beautiful clusters of perfect flowers on a Rambler are of little use when the plant is crippled by imperfect foliage.

Azaleas for Easter

Treatment for the Plants Intended For That Day

While we may dispose of an Azalea in bloom occasionally during the next two months, it is at Easter that quantities of them are sold, and to have them just right for that day requires judgment. When Easter comes on such an early date as this year, moving the plants, according to their varieties, from warm into cooler quarters or vice versa may be

necessary. There is quite a difference as to the blooming period, especially when in the greenhouse. With Azaleas, when Easter comes into we may experience trouble in holding the plants back. On the other hand, when wanted early certain varieties may not be in on time. You can't have a dozen varieties and expect them to bloom at the same time, under the same conditions, but by bringing those backward into warmer quarters, or using a 40° house for the advanced ones, you come pretty close in striking it right. Remove any growth which is liable to appear alongside of the flower buds—this should be attended to regularly. Go over the plants once a week—it pays. Don't crowd the plants on the benches; it isn't right to let the light and air get around every one; even when kept in a Violet house or near the freezing point the plants require plenty of water, and the ones in 5-in. pots should be sprayed every day. Keep the foliage clean and glossy, it is as necessary to the plant as its roots are.

Orchids

Cattleyas and Cyripediums

I predict the time will soon come when the out-of-town retail grower, even with only a few thousand feet of glass, will find it necessary to keep a stock of Orchids; not that he will thereby be enabled to have a full supply of his own for all occasions, but his customers will ask to see his stock and it is wonderful what difference it makes in taking orders if one is able to show a few plants, and what a drawing card they are when in bloom. We know that to be successful and make the growing of Orchids pay it requires proper facilities for handling the plants and handling them in strict attention to their requirements in every detail. When considered as a side line they, like anything else, are liable to be neglected, and it doesn't take a Dendrobium, Cattleya or Cyripedium any length of time to perish if neglected, even if it only requires a little moss and peat to sustain the plant. A good many of the Orchids, such as Cattleya Percivaliana or labiata, Dendrobiums and others, may be kept in a Palm house where a temperature of 60° and over is maintained; for the Cyripediums a Carnation house will suit better, say about 50°. If you have any stock on hand now, after flowering, is the time to go over and re-surface same with live sphagnum moss. Remove all dead, decayed or useless material. Work in between the exposed roots some peat, which cover with moss. The Cattleyas need a time of rest after flowering until the bulbs begin to show new life. Don't keep them soaked with water during that time, they don't want it. Should you have a number of Cyripediums which could stand dividing, now is the time to do that. Carefully remove the soil and gently part the plants—it's no trouble when done carefully. There but few of us who haven't use for this valuable Orchid, and not requiring a high temperature and, really, little work, more should be grown. When potting the divided plants, be sure to secure proper and plenty of drainage. Don't try to bury the crown of the plant, and use some loam for potting, which should be covered with sphagnum. In another month from now the Cyripediums will start to grow, so encourage the plants in every way possible, in order to get them in good shape for another season. The demand for Cyripediums as well as all other Orchids is increasing every year; get ready for it, if you haven't already a few good plants on the place get some, you will have to come to it sooner or later.

Seeds to Sow Now

Asparagus, Grevillea and Cannas
 Among the seeds to be sown now, Asparagus, both plumosus and Sprenger should be included; they constitute important factors with the retail florist. Hardly ever has the average retail grower sufficient of either on hand and there are many who work under the impression that, especially A. Sprenger, they can be successfully grown in any old corner or places where nothing else will grow, and that it is just the time to devote a bench where cut flowers will grow to it; but this is folly. Only when either of the Asparagus is doing its best does it pay, and whenever they are struggling along in some dark corner you can't expect anything but failure. Fresh seed of the Asparagus will soon be offered, and that is the only kind to get. Old seed is worthless, but if fresh you will have no trouble in getting it to germinate, in a Rose house temperature. If you use any Grevillea robusta, that useful plant, sow now; Dracena indivisa also can be sown at this time. If you wish to try your luck with Cannas from seed, now is the time to do so, as the seed are as hard as iron; as good a way as any is to let them soak in real hot water 20 to 30 hours, and a good strong bottom heat is required below the seed boxes afterwards to get results. Seed of Cannas saved from good varieties will not come true to name, but it is always interesting to grow them in that way, and even if you can't recommend them to your customers they are well worth while to plant out in nursery rows on your own grounds.

The address label indicates the date when subscription expires and is our only receipt therefor.

Registered Cable Address: Florex, New York.

Telegrams.—Telegrams received in this office up to 3 p.m. Wednesday, containing changes in advertising, will receive attention for the issue of the Saturday following; likewise, telegrams having informative matter intended for our news columns will be received up to Thursday 9 a.m. News telegrams should be forwarded after 5 p.m. Wednesday and marked "Night Press Message, Collect." These will be forwarded by the Telegraph companies at their newspaper rate, providing the material so forwarded contains news for the paper.

Index to the Florists' Exchange, Vol. XXVIII

This index, covering the period from first issue in July to last in December, 1909, will be shortly ready for distribution. Subscribers desiring a copy of this index can obtain same by notifying us by post card; copies will be mailed to those who have already previously advised us to that effect.

The Florists' Exchange Design Book

A new edition of the Design Book is now in preparation and, it is expected, will be issued about January 20. It will be found a decided improvement on the earlier editions, has been completely remodelled and now contains 80 pages, covering a multiplicity of designs. It will be freely admitted the most valuable compendium of its character ever offered to the trade, as well as the cheapest. It is sold only in connection with a subscription for this paper; The Florists' Exchange two years and one copy of the Design Book, new or renewal subscription, for \$2.50.

National Council of Horticulture

There will be a meeting of the National Council of Horticulture at the Auditorium Annex, Chicago, January 17, 1910, at ten o'clock a.m., to arrange details for next year's work. All interested in exploiting horticulture along broad lines, or in other matters properly belonging to the work of the Council, are invited to co-operate. It is earnestly hoped there will be a good attendance. H. C. IRISH, Secretary.

The American Rose Society

The fifth annual bulletin of this Society is before us and makes quite an imposing appearance with its 100 pages of informative matter. The principal contents of the bulletin naturally are noted in the very full report of the tenth annual meeting and exhibition held at Buffalo last March. The Constitution and By-Laws of the Society and a list of officers and members is also given. The book is well printed in clear type and contains several interesting pictures of exhibits at the show as well as of leading men in the Society.

The list of life and active members appears to be a growing one, and it is sincerely to be hoped that before long this essential to the vitality and influence of an organization will be multiplied many times under the indefatigable exertions of its secretary, Benj. Hammond, who is, we all know, unremitting in his efforts to build up a large and influential membership.

Attention is again called to the fact that the next annual meeting and exhibition is to be held in New York City, March 16 to 18 of this year.

Acknowledgments are due several public spirited members of the Society for the financial assistance rendered through the placing of their advts. in this edition.

The Chrysanthemum Society of America

The Chrysanthemum Society of America will hold its next annual meeting and exhibition at Morristown, N. J., an invitation by the Morris County Gardeners' and Florists' Society presented at the last meeting, in New York, having been accepted by the executive committee.

Meeting of the A. C. S. at Pittsburg

There are but few of our readers who need to be reminded of the forthcoming Convention of the American Carnation Society, which is scheduled to take place at Pittsburg, Pa., on January 26 and 27.

The city selected is eminently central and we shall be greatly disappointed if this meeting and exhibition which, by the way, will be the Society's twentieth, does not turn out the very best yet held.

As to the exhibition, the growers of the East and the West will meet on almost neutral ground, while any interesting program has been arranged.

The debate as to whether the Carnation Society and the Rose Society should hold joint meetings ought to bring out facts, figures and opinions that will influence somewhat the older question as to a closer amalgamation of all the younger national societies with the S. A. F.

But the exhibition of flowers will be, after all, the magnet that will attract and draw delegates. It will be well worth the while of every florist who makes a fair proportion of his income out of the sale of Carnation blooms to be present in person at this Pittsburg meeting. This yearly opportunity of rubbing shoulders, comparing notes, and seeing for oneself all the leading sorts "under one roof" is too educationally valuable to be missed.

The Pittsburg Cut Flower Co. has issued a handy pocket plan of the business section of Pittsburg, showing the location of hotels, railroad stations, public buildings, theaters and florists' establishments. The company will be pleased to forward a copy to anyone sending for it. It also invites anyone attending the convention to make the company's place of business, 222 Oliver ave., his headquarters.

The New York Florists' Club

The first meeting in the new year of The New York Florists' Club was held on Monday evening, January 10, at the Club's quarters in the Grand Opera House building, 23d st. and 8th ave., with a very large attendance of members.

Retiring President H. Turner opened the proceedings, which commenced with the installation of the newly elected officers. He appointed Charles H. Totty, Madison, N. J., as escort for President Miller, who was then conducted to the rostrum. C. B. Weathered performed a similar duty for Vice-President J. A. Manda. Secretary Young and Treasurer Rickards made introductory bows as did also Trustees Bunyard, Pierson, and Kessler. All of these gentlemen made brief addresses, in which they eulogized the Club and promised their most hearty support in its work during the ensuing year.

The committee having in charge the entertainment of the delegates at the forthcoming convention of The American Rose Society reported progress, and that it would make a complete report at the next meeting.

For the Transportation Committee, J. H. Pepper reported that the Pennsylvania R. R. had offered railroad rates to Pittsburg, on the occasion of the Convention of The American Carnation Society, of \$8.78 on a ticket covering ten or more delegates, unless 100 would attend when the rate would be made equivalent to three cents a mile round trip. The railroad company also offered to place the Pullman car conveying the party at the rear of the train in order that they might cut off the heat from the rear end, thus accommodating those who wanted to carry their exhibits with them. On motion, Mr. Pepper was authorized to complete arrangements and to communicate with all members.

The committee on awards reported that it had visited Cottage Gardens, Queens, N. Y., and inspected the Carnation C. W. Ward, and as a result recommended that the preliminary certificate awarded the variety be confirmed.

The following were elected to membership in the Club: John Kessler, 50 W. 28th st.; W. H. Siebrecht, Jr., 277 Broadway; W. C. Wright, and Thomas V. DeForest, 1133 Broadway, all of New York City. These gentlemen, being present, were introduced to the meeting and acknowledged their election in brief addresses. Several candidates were nominated for election at the next meeting.

Secretary Young announced that he had received the medals which the Club had awarded for exhibits at the exhibition of the Chrysanthemum Society of America last November, and that, as soon as he should receive the necessary wording to be engraved on them, the engraving would be made and the medals sent to the successful exhibitors.

A letter from George Sykes of Chicago, presenting his resignation as a member of the Club, was read and the resignation accepted with regret.

Walter F. Sheridan moved that the president appoint a committee to make arrangements for the annual dinner of the Club, such arrangements to be on the lines of the dinner of last year and to include the attendance of ladies, with tickets at the same price. The motion being carried, W. F. Sheridan, J. B. Nugent, Jr., Chas. Schenck and C. H. Totty were appointed as such committee.

President Miller then announced his appointments of standing committees as follows: Legislative: P. O'Mara, Chas. B. Weathered, F. R. Pierson. Essay: W. F. Sheridan, J. H. Pepper, John Young. Awards: C. H. Totty, William Duckham, I. S. Hendrickson, F. H. Traendly, Harry Turner, Chas. Weber, Robert Simpson, W. H. Siebrecht, Sr. Exhibition: A. J. Manda, William E. Marshall, R. E. Berry, Julius Roehrs, Jr., James T. Scott. House and Entertainment: J. B. Nugent, Jr., R. M. Schultz, Robert Koehne.

In addition, he appointed as the outing committee, the following: H. A. Bunyard, chairman, C. Schenck, J. K. Allen, H. Weston, Louis Schmutz, Jr., Frederick F. Kessler, R. G. Wilson, Wm. Badgley, J. Rassbach, John Birnie, J. A. Manda.

Secretary Young read a letter from The Morris County Gardeners & Florists' Society inviting all members of the Club to its fourteenth annual "Smoke Fest" to be held in Madison, January 12. He also read a letter from the Greek-American Florists' Association, inviting the officers and board of directors of the Club to a ball to be held on January 17. Both invitations were, on motion, accepted.

Treasurer Rickards read his annual report which showed that the funds of the Club in banks amounted to \$8863.35. The report, which had been audited by the Trustees, was, on motion, accepted and filed.

Motions by C. B. Weathered were made and the same were carried empowering the dinner committee and the outing committee to make arrangements looking to the fulfilment of their objects.

Robert E. Berry announced the death of the Club's bowling organization and offered humorous resolutions covering the same which afforded much amusement to the members.

A resolution by C. B. Weathered that a rising vote of thanks be tendered the retiring officers was carried with enthusiasm, as also was a motion by Mr. Berry conveying the thanks of the Club to President Miller for his entertainment that evening.

During recess, and after the meeting had adjourned, the Club was entertained to a substantial lunch by President Miller, and an hour or two was pleasantly spent.

EXHIBIT.

E. L. Enggren of Aqneduct, L. I., exhibited a vase of a beautiful deep pink seedling Carnation, on which the committee of awards gave a preliminary certificate, the variety scoring 85 points.

Smoker of the Morris Co. (N. J.) G. and F. Soc

The fourteenth annual smoker of the Morris Co. Gardeners and Florists' Society was held in Masonic Hall, Madison, N. J., on the evening of Jan. 12. These affairs are becoming more and more famous each year, judging by the attendance and enthusiasm. The committee in charge, composed of A. Herrington, Wm. Duckham, Chas. H. Totty and R. M. Shultz, is to be congratulated on the successful outcome of this, its last effort. "Totty's punch," a concoction fully equal to all of that gentleman's well-known productions, was on tap, and the circulation of it created sociability rapidly, so that by the time the excellent program was in progress the crowd was in a position to enjoy it—the program—to the full. Songs and impersonations were the main features of the entertainment, and were fully appreciated. Sandwiches, coffee and cigars were freely dispensed, as well as some of Madison's famous Celery, distributed by the inimitable Bob Shultz (with plenty of salt) who saw to it that each guest had his share.

Many friends of members of the Society journeyed to Madison; New York, Red Bank and other places were well represented. The festivities were kept up until last train time, and all agreed that the boys of Madison never do things by halves, and that each smoker is far ahead of the one held the previous year. Much enthusiasm was evoked by an announcement made by Arthur Herrington at a short business meeting, held before the smoker began, to the effect that the executive committee of the Chrysanthemum Society of America had decided to hold its annual show in Morristown, N. J., at the same time, and in conjunction with the show of the local Society.

John M. Barker of Morristown, N. J., showed a handsome vase of Christmas Pink Sweet Peas.

M. Bernaix, the well-known rosarian of Villeurbanne, near Lyons, France, is introducing two new hybrid Teas, which he describes as follows: BERTHE GAULIS.—The bud is large and a longish oval, often borne singly on stiff, erect stems, brilliant bright pink in color. The flower is very large, perfect in form and very full, of a pure Hermosa pink, darker in the center. This superb variety, which blooms very freely, is recommended for grouping and as a cut flower.

Monmouth Co. (N. J.) G. and F. Society

The annual dinner of this Society will be held at Red Bank, N. J., on Jan. 19. A good time is assured.

Yale Men Knock Florists

The committee having in charge the various activities of the Yale students Promenade Week at New Haven, Conn., ruled that no flowers be worn at any of the festivities, and to make this more effective, every man who purchased a ticket was forced to sign a pledge that he would not indulge in this luxury. The injury to the florist's business through the committee's action can be fully realized, as the supply of flowers for this event is contracted for months ahead and a serious loss will be the outcome. The florists patronize the Yale men's games, advertise in their magazines and, naturally, regard this as a particularly hostile move against them.

Dinner of the Tarrytown Horticultural Society

The eleventh annual dinner of the Tarrytown Horticultural Society was held at the Florence Hotel, Tarrytown, N. Y., on Wednesday evening, Jan. 12, and was largely attended. An excellent menu was prepared by the hotel management, and the service was all that could be desired. The tables were handsomely decorated with Winsor Carnations, Killarney Roses, small vases of fronds of *Nephrolepis compacta*—one of the Pierson specialties by the way which lends itself admirably for table adornment—greenery and flowering plants, the latter also being used as wall decorations. A first-class orchestra, provided by F. R. Pierson, dispensed a pleasing selection of music before and during the dinner. Vice-president John Woodcock presided, and after coffee had been passed introduced Henry C. Griffen as toastmaster for the evening, who more than proved his fitness for the office. His first call was on J. A. Shaw, the "perpetual bloomer" as he termed him, who read one of his characteristic addresses. Andrew H. Brown was the next speaker, and he after a humorous address presented Secretary E. W. Neubrand, on behalf of the members of the Society, with a pair of silver mounted military brushes and a pair of gold cuff buttons, a gift which Mr. Neubrand feelingly acknowledged. F. R. Pierson, who was introduced as "a man who had made good" spoke enthusiastically of the work the Society had accomplished and the position it occupied in the horticultural world, and of the pride he felt in being one of its organizers many years ago.

The Hon. Frank V. Millard, one of the Society's directors, was also introduced as a "man who had made good" and demonstrated his ability as an after dinner speaker. His stories produced roars of laughter and each one carried a point.

The veteran M. D. Raymond, Tarrytown's retired newspaper proprietor, made one of the addresses for which he is famous, and which have for a number of years been features of the Society's dinners.

Senator Chas. P. McLellan made a very entertaining address, well besprinkled with stories, and was loudly applauded in his efforts to explain what he knew about horticulture; in fact his was the real "horticultural" speech of the evening.

Jas. Guthrie, who represented the Nassau Co. Horticultural Society made a pleasing address, and other members and guests also contributed to the evening's entertainment.

The dinner was delightfully informal, and passes into the Society's history as one of the best ever held.

Connecticut Agri. Exp. Station Destroyed

A fire, early on Monday morning, Jan. 10, completely destroyed the old building of the Connecticut Agri. Exp. Station, on Huntington st., New Haven, Conn., and also destroyed all the contents, including the general library of valuable volumes and a private library of Chemist T. B. Osborne, that were in the building, as well as many valuable instruments, etc. It is believed that the total loss will be upwards of \$25,000, which is said to be covered by insurance.

At the last session of the general assembly the sum of \$30,000 was appropriated for the building of an addition to the old laboratory and this has been built and the finishing touches were just about completed when this morning's fire occurred. The new addition is all of brick and concrete, even the floor and roof, and, although a fierce fire raged beside it, it was entirely unharmed.

Owing to the brick walls, the fact that the new building is absolutely fire proof, and that the direction of the wind confined the fire within the burning building, the other nearby buildings, such as State Entomologist's, Dr. W. F. Britton's office, and that of Director E. H. Jenkins were saved from becoming ignited.

The old laboratory contained most of the valuable records and specimens possessed by the experiment station. In one of the corners was the station library, the records in which are valued at about five thousand dollars. The laboratory also contained Prof. T. B. Osborne's library which was valued at a like amount. All these were destroyed and many, it is feared, cannot be replaced. Some of the records which were in a fireproof vault were not damaged, it is believed, but most of the other contents were a complete loss.

The Carnation to the Fore!

The Nineteenth Annual Meeting of the American Carnation Society is to take place at Pittsburgh, Pa., on Wednesday and Thursday, January 26 and 27, 1910

In its issue of Saturday, January 29, The Florists' Exchange will give an account of the meeting, the Proceedings and the Exhibition.

The editions of January 22 and February 5 will likewise be representative of the live trade interest which mention of the Carnation always excites.

The Informative Side

Growers and distributors of Carnations, whether they use our advertising columns or not, are requested to furnish us at once, for publication, notes on their novelties and on their experience with the leading standard varieties the past year.

The Advertising Side

Of especial value to advertisers of Carnation stock will be our editions of January 22 and 29, also of February 5, and we invite the attention of all concerned to the particular advantages afforded by these three consecutive issues, of making known their offers.

Dinner of the Hort. Soc. of Newport, R. I.

The Horticultural Society of Newport, R. I., celebrated its 20th anniversary on the evening of Jan. 11, almost 100 being present (members and guests) to participate in the festivities.

The dinner took the place of a regular meeting and was served at Sanborn Hall, where the Society has been coming together almost ever since its founding. Four long tables, running the length of the hall, with the guests' table at the head, made a very convenient and pleasing arrangement. The decorations on the table consisted of growing plants in bloom and cut sprays of Asparagus. In the corners of the building were arranged some fine specimen Palms, which added to the homelike appearance of the place.

At the guests' table were seated the following: The president of the Society, James Robertson; toastmaster, Richard Gardner; chairman of the Dinner committee, Andrew K. McMahon; State Senator John P. Sanborn, and representatives of the State Legislature, Messrs. Franklin and Kerr. Mayor P. J. Boyle, John K. L. M. Farquhar and Supt. of Parks John A. Pettigrew of Boston, Mass.; Clark Burdick, James McLeish and John P. Hammond, of this city.

Letters of regret for absence were read from Congressman William P. Sheffield, Representative R. Livingston Beckman and David McIntosh of Tuxedo Park, N. Y.

An enjoyable menu had been provided and, when the cigars had been lit, President Robertson, in a few words, welcomed those present, and bespoke for the Society continued support. Toastmaster Gardner was introduced and, in an interesting way, traced the Society's history from its very inception to the present time. It is interesting to note that three out of the five men who brought

about the first movement for the formation of the Society were present at the dinner.

The first toast, the State of Rhode Island, was ably responded to by Senator Sanborn; the Legislature, by Representative Franklin; the city of Newport, by Mayor Boyle; Horticulture, by John K. L. M. Farquhar; Past Presidents, by Col. Andrew K. McMahon; Absent Members, by Alex. MacLellan in lieu of D. McIntosh.

John P. Hammond made the hit of the evening, in his talk on Newport's parks and trees. Many of the members were not aware until now that in our first vice-president we have a born orator; he certainly made good his points in a way that won't soon be forgotten. The last toast, "The Ladies," was responded to by flon. Clark Burdick, who knows his subjects and, being a lawyer, knows how to handle them.

In the absence of the Rickards Bros. of New York, their places were filled in by local talent. The writer left the hall about 1 o'clock and the "Auld Lang Syne" had not yet been sung. This dinner will go down in history as the most successful social session the Society has held to date.

ALEX. MACLELLAN.

National Sweet Pea Society (Gt. Britain)

The annual general meeting was held at Hotel Windsor, Westminster, December 9. The report showed that at the end of the year 1908 the society had 779 members on its books and 51 societies in affiliation. During the year just ended no fewer than 280 new members have joined the society, a few of these having entered for the coming year. The membership now stands at 938 while the number of affiliated societies is 101.

Spraying Chrysanthemums with Soot Water

In a recent issue you printed an article on "Mums by Mr. Thos. Proctor of Lenox, in which he advises spraying with soot water. Can you inform me as to the object of such spraying?—J. A. M., Conn.

—As to the object I have in spraying with soot water as advocated in my recent article, on the growing of Chrysanthemums for exhibition. It is used by me as a preventive against rust and mildew affecting the foliage. There are different remedies recommended for that purpose, such as copper solution, liver of sulphur, etc., and while those remedies may stop the spread of the disease, they disfigure the foliage.

I find that by starting when the plants are in a young stage and syringing as stated about once in two weeks with the soot water, there is no trouble with rust or mildew and, aside from that, the soot has a beneficial effect on the foliage, imparting that dark green color so essential to their growth. The soot is put in a bag, allowed to steep over night in water, just enough water to cover the bag; reduce the strength as desired by adding more water, and syringe on the plants with some force to the underside of the foliage, and allowed to remain over night.

Those growers who have never used this material will be surprised at the results obtained after a fair trial.

Lenox, Mass.

THOMAS PROCTOR.

[Mr. Proctor's valuable paper was printed in our issue of Nov. 20, page 770.]

New Plants in Guernsey

I have seen plants of a very delicately variegated Smilax in the houses of Mr. N. A. Le Page of Rosamunda, S. Saviours. The foliage is a creamy white, but the stems and the petioles of the leaves are green, and there is a green stripe in the center of most leaves. Strangely enough, the plants seem as vigorous as the strongest of the ordinary Smilax, good trails of five to seven feet being obtainable. And what is even more remarkable in the pale variations of such plants is that Mr. Le Page's flower and seed quite freely. If the variation is permanent, and it promises to be so, as the plants are two to three years old now, this will make a valuable addition to our decorative foliage. The leaves of the new White Smilax are of medium size, between the myrtifolia and the large-leaved green.

Mr. A. J. Guilbert, at his Rohais Nurseries, has also a very bushy variegated Asparagus Sprengeri, but the variegation is not very pronounced, it merely giving the plants a very golden appearance. This is more pronounced in artificial light. The variegation is a yellow stripe in the center of each leaflet. Mr. Guilbert is also bringing out a new Richardia, of which Elliottiana and Mrs. Roosevelt are the parents. The foliage is mottled and spotted in an exactly similar way to the Calla Elliottiana, the golden Arum, but the leaves of the new Arum, which it is suggested should be named Spero, are much more arrow-shaped, almost exactly the shape of the aquatic plant, the Arrowhead, Sagittaria sagittifolius. The spathe of the new plants are pure white in the upper parts and about the size of The Godfrey, while the spadix is a pale yellow, very similar to the color of the spathe of Mrs. Roosevelt. Deep down in the base of the spathe, and out of sight unless the trumpet is looked into is a blotching of deep purple. The flower stem is long and mottled brown and purple and yellow, like the stems of Elliottiana. The new Richardia should prove a good addition to our somewhat scanty list of Arums.

BY EBER HOLMES

Richmond, the Best Red for Christmas

The Christmas season just passed brought out two points clearly. One was the scarcity of red Roses, and the other the beauty and usefulness of White Killarney. With regard to the former, we all know that at the present time Richmond is our great standby for red, but it is apt to produce quite a lot of blind wood at this time of the year although it is also true that these same blind shoots will break again and eventually produce a flower. It is advisable to keep this Rose fairly warm, about the same as advised for Killarneys, or it is apt to go to sleep in the Winter months. It is true that this Rose does well and keeps healthy in a lower temperature, and has been grown in a Carnation house, but to get the best results it should not be kept below 58° or 60° at night. There is really little to be said about other red Roses for Winter flowering; there are kinds that do well in certain localities, but for all around purposes Richmond is king.

White Killarney

With regard to White Killarney it may be said to have made good, to use a common phrase. There is no doubt that it has come to stay and the thing that impressed me most was the fact that, like its sister, the Pink Killarney, it is so very easy to manipulate and may be made to bring in a full crop at almost any time you wish, which is without doubt a great recommendation for it, especially at Christmas and Easter, when white Roses are in demand.

Starting Up Three-Year-Old Plants

While on the subject of Killarney I want to report on the batch I spoke of in my October letter that were carried through the Summer, the last crop being cut off the last of August and the first of September. These plants (about 2300) were top-dressed as described at that time and started up. There were five benches, each about 150 feet long. The two front benches were the best after starting up and were allowed to flower for Thanksgiving. These gave an average of 12 flowers per plant at that time. The three back beds did not start up quite so well and so were pinched back about the 20th of October; on the second break they did better and came along splendidly, with the result that we got about the same number of flowers per plant as we did on the November crop, but of finer quality than those plants produced. The best feature of it is that the crop is divided and, by practicing this method all through the houses, a steady cut is maintained which pays much better than a large lot at certain times and none at others.

[The note to which Mr. Holmes refers, "Starting Up Plants," will be found on page 538, issue of Oct. 9, 1909.]

Of course, at holiday times, we always try to have a greater quantity and the Rose that will adapt itself to these conditions is likely to be a winner today.

Notes on Various Other Sorts

We had a few of the old Perle des Jardins on trial this Fall. They were brought in for Christmas, producing about 10 flowers per plant, and sold readily; these were small plants that were only benched in August. It is rather remarkable that this old favorite is not more grown. I think that one cause of failure with this is the fact that some growers kept it too cold. It does well in a night temperature of 60°, as does Sunrise, which is also liked by some people.

Rose Mrs. Humphrey Ward

One of the newer Roses which is rapidly coming into favor, and which seems likely to be a money maker, is the one commonly called Mrs. Humphrey Ward, and being grown exclusively, I believe, by Mr. W. H. Elliott for the Boston market. This is a Rose of easy growth and distinct from anything now on the market. My Maryland is doing well with us and, in the Summer time, may be ahead of Killarney. Queen Beatrice we have found to be a good grower when planted on its own roots and a ready seller. For a man with a retail trade, or for a private place, it is a very desirably variety. There are, of course, new claimants for a position but it is rather early to pass upon them yet.

English Grown Manetti Stock Scarce

One thing is worth noting and that is the scarcity of English grown Manetti stock this year. It is likely

that plants grafted on this stock may be scarce before the season is closed, and it would really be wise to order in time where stock is needed. It is remarkable how people delay in ordering their stock. They would do much better to speak in time; there is nothing to gain by waiting for bargain sales in July for the best stock has been sold out by then, and every day counts at planting time. The best results are always obtained from plants started early and the sooner this lesson is learned the more money you will make.

On Greenhouse Building

It has been remarked that too much attention is paid in our trade papers to cultural notes and not enough to greenhouse building. It is a fact that construction is of supreme importance, nothing can be done without it, and for the beginner the safe way is to give out the contract to some reliable firm of builders. As you gain experience you will be able to build your own houses if you so desire. A house well built is a source of joy and profit to its owner for all time.

Cautionary Notes

We find that, no matter how well a house is built, we lose a few lights of glass during heavy winds and snowstorms. It is advisable to always keep something on hand of the right size to stop up a hole from the inside at such times until the glass can be reset properly. A piece of zinc, or good waterproof building paper, or boards made out of old boxes, make handy things to

period after firing commences and before steady cold weather sets in. This is also where the large modern house has a great advantage over the small one. The latter has a close, stuffy smell, while the large house is always sweet. There is little danger of too much heat after New Year's. Keep the fires going until the sun is able to help out the required temperature, and start heating up early in the afternoon if the weather looks suspicious. Damp down the dry walks every day or two and syringe as occasion requires; do it thoroughly when you are about it.

We find that as soon as a crop has been cut off a lot of plants is the best time to go through them and trim out any old or useless wood. We then tie them up in fair shape and they are all ready to make a good new start without any further trouble. We syringe oftener then, for a couple of weeks, to induce a new break and to get rid of any red spider which may have started when the crop was on and we were unable perhaps to syringe as well as we wished. It is not advisable to syringe much when in full crop, especially if the weather is bad. We have had to go over the bushes and shake them to take off the surplus water in the short dark days after syringing. On kinds subject to black spot this is a good thing to do; a short piece of rubber hose makes a good tool to shake the plants with. We have had little occasion to do this the past Fall and, in fact, have in some cases syringed purposely on cloudy days and let the bushes remain wet over night where we saw a trace of red spider. We could see no harm whatever to the plants where the proper warmth was maintained, even if they were wet all night, and this treatment is a pretty sure cure for red spider. Of course, when in crop, this cannot be done, as the flowers will become spotted.

Most plants will require extra stimulant now and should receive manure water regularly. Keep the houses clean, plants tied up, and pay careful attention to every detail, not forgetting the regular fumigating for green fly. Where propagation is going on be very careful to select scions and cuttings from nothing but clean and healthy stock. This is one of the best ways to insure success.

Stray Notes from Abroad

BY T. A. WESTON

Aster, Miss Gainsford
A Splendid Light Blue Variety. Height, 4 ft.

Border Carnations

The introducers of the new border Carnation, Comtesse Knuth, are certainly doing their best to make it known, but whether it will catch on remains to be proved. So far as I am aware, border Carnations are not in great vogue in America, whereas over here they are more widely grown than the greenhouse types.

Border Carnations are perfectly hardy here, and moreover they resent anything in the way of coddling, the utmost protection that anyone thinks of giving them being a well ventilated coldframe for the purpose of keeping off heavy rains, which are liable to cause rot. Most growers, however, let them take their chance in the open ground.

Respecting this type, the flowers differ largely from the Perpetuals, being smooth edged, while the colors are more numerous. The Picotees or edged Carnations, are practically as hardy as the others and they are exceedingly pretty and telling. Comtesse Knuth, by the way, although described as yellow, is stated by one who has seen it, to be really buff. It is a strong grower and is likely to prove useful. Strangely enough, a Scotch grower has a seedling of identically the same color and habit, but, if anything, it is superior to the Danish novelty.

The Aster, Michaelmas Daisy

In recent years several of our growers have been working hard on these, and the advances made are remarkable. The well-known gardener, Edwin Beckett, has done wonders in the small flowered section, and the noted 'Mum grower, H. J. Jones of Lewisham has also raised large numbers of varieties, which are beginning to catch on for cut flower work.

Coming in in the Autumn they serve to a very useful purpose as they differ so much from 'Mums. There are many types, some bearing myriads of tiny flowers, others have blooms nearly 2½ in. across, the colors running through all shades of blue and pink, while numerous sorts have white flowers with yellow or bronze discs. The heights range from 6" to 4', and all bear their flowers in sprays.

They multiply rapidly, as the roots are of the running type, so that propagation is child's play. For pot work many of them are delightful, as even the tall kinds, if cut back in June, will grow afresh and make splendid dwarf bushes for Autumn decoration. They are hardy as a door knob, and the flowers will bear several degrees of frost. A few sorts to be recommended are briefly quoted:

Amellus Prometheus, bluish rose, 1½ ft. Bessie Loeb, pink, 2½ ft. Dan Clark, porcelain, 3 ft. Maude, white, yellow disc, late, 2½ ft.

Moonstone, greyish white, 4 ft. Rosalind, rose, 3 ft. Vimicus elegans rosea, white changing to pink, 2½ ft.

keep out the cold and stop further damage. It is an excellent plan to keep a good sheet of canvas on hand in case a large hole is opened up at any time. This is only a precautionary measure; there may be little need of it, but we never know what may happen. We often had to prop up the old wooden houses when the snowstorms came and shoveling out the gutters was a common thing, but the houses that are built now seem able to withstand almost any storm. We always like to see the snow disappear from the south side of the houses as soon as possible, but I have noticed for the last twenty years that more glass, as a rule, is broken when the men go to start the snow off the roofs than is broken by the elements. If the snow is left on the north side for a few days, during a very cold snap, it is a great protection to the houses, and it will gradually wear away and come off altogether at the first warm spell with little if any damage.

Seasonable Cultural Notes

It was written, years ago, that if Roses were in good shape at New Year's there would be little fear of them not doing well the rest of the Winter. There is a great deal of truth in this. We are, of course, only just commencing to get really cold weather, but the days will soon be getting longer and in a few weeks more things will be starting up again in good shape. I think that one of the chief causes of failure in the Fall with the beginner is that his Roses are kept too warm during the

Vimicus elegantissima, white golden center, 2½ ft. Vimicus Fairy, rosy grey, 3 ft.

Breydon, pale blue, 3 ft. Pink Gem, pink, 2 ft. Amellus Mariou, light blue. Dainty, white, 3 ft. Lil Fardel, deep pink, 4 ft. Thirza, cream, 4 ft. Golden Spray, white, yellow disc, 2 ft. Delight, white, 3 ft. White Spray, 5 ft. Flossy, white, 4 ft. Osprey, soft pink, 3 ft. Horizontalis, bronze, 2 ft.

All the Vimicus type bear very small flowers in dense masses. The Amellus type have large flowers, and a dwarf habit. The Cordifolius section have medium flowers and average 3 ft. to 4 ft. The diffusus section are of pendulous habit.

There are several other sections, all more or less beautiful. Up to the present there is only one double, "Colwall Beauty," this being light blue. Miss Gainsford, a tall growing variety of great beauty, comes semi-double at times.

Pasadena Tournament of Roses for 1909

This, the twenty-first annual fête of the Association, begun, as I said in a previous note, in simplicity, has grown to immense proportions, and this year plans were laid to have it eclipse in grandeur any preceding tournament. An official program of beauty was issued, to the number of twenty thousand, and in addition to that The Star, one of the city dailies, issued, at great expense, a beautiful souvenir edition, in which appears cuts of various floats and other decorated vehicles of the parade, as well as matter advertising Pasadena, its commercial, social and education advantages and its superiority as a residential city. The official program contains scenes of the 1908 tournament; the newspaper publication contains the scenes, what few there were, of 1909.

Rain began to fall the night of Dec. 30, and the downpour was steady until the morning of New Year's Day, with threatening weather for a continuance up until noon. When the clouds rolled away and the sun shone brightly the impression prevailed in the public mind that there could be no parade under such conditions, and that the chariot races would not be held on a muddy course. The directors of the Association announced through the press on Friday evening and Saturday morning that the parade would take place rain or shine, but that the races would be postponed until Jan. 8. And true to announcement the parade was held; a pigmy in size compared to those of other years, but a parade just the same. As a rule the attractive features of these annual exhibitions are decorated floats of various designs, and carriages and automobiles covered with flowers and foliage, displaying the ingenuity of the decorators, all of which are filled with beautiful girls clad in gorgeous fluffy gowns, or matrons in more expensive attire. This year, however, but two automobiles, one carriage and one float of that class were out. An original design made of Phoenix Canadensis Palm leaves, suggestive of the economic value of this Palm, was in the parade. This float was designed by Japanese and, true to their early training, they had long, slender branches of bamboo canes made to represent those of the double-flowering Peach and Cherry of their native land, by using red and white Carnations. The effect was very pleasing.

Ezra Meeker of Oregon trail fame, the man who astonished New York in the early part of 1890 by appearing in its thoroughfares with two large oxen hitched to a canvas-covered wagon, known as a "Prairie Schooner," was a novel feature, and in marked contrast to automobiles and gaily bedecked and prancing steeds. He made the overland trip from Oregon to New York and return to California by this primitive method of travel, with one object in mind, that of awakening public sentiment in favor of erecting monuments along the "old Oregon trail" to commemorate the time when the Pacific Coast was reached by this slow and perilous method of travel, and thus to perpetuate the memories of the hardy pioneers, both men and women, who had the courage to open up to the world this wonderful country. A worthy motive which it is hoped the patriarch may live to see fulfilled.

The Pasadena Board of Trade automobile was completely hidden with bloom of the Japan rice paper plant, Fatsia papyrifera, which is now in full bloom, despite the chilly days and frosty nights. The "Rose" part of the tournament was not very conspicuous this year. Chilly weather and the heavy rain had its disastrous effects on the Queen of Flowers. One peculiar feature of this and all other parades held here is the violation, the gross violation, of the beautiful, the artistic, namely, decorating the tails and legs of horses with ribbons. The beautiful flowing tail of a spirited animal and the graceful outlines of its sinewy legs are marred by men, and women fond of the spectacular, yet lacking in good taste by applying these gaudy appendages.

P. D. BARNHART.

The Carnation Convention at Pittsburg

The Florists' Exchange issues of Jan. 22 and 29, also of Feb. 5, will be essentially Carnation Numbers. (See advertisement on editorial page.) Very many of our readers are equally interested with the disseminators in the behavior of all the leading varieties of Carnations on the market, and to these we extend a hearty invitation to send us in for publication a summary of their experience in 1909 and their suggestions for 1910. —Write now while the mood is on you.

Dahlias from Cuttings—Mixtures

Most florists understand that some cuttings root sooner and better if taken off just below a bud, but although Dahlia cuttings root readily from any portion of the stem, there is another very important reason why there should be no bare stem below the buds; for unless there are buds very nearly down to the roots, while they may be all right for one year, varieties with long joints are liable to come "blind" the next year. Such varieties as Jack Rose and A. D. Livoni, which are short jointed and have plenty of buds pretty close down to the tubers, very seldom fail in this way, but some others, like Pink Pearl, for instance, very often fail to produce any sprouts the second year, even though they have large clumps of strong healthy tubers in perfect condition. I have sometimes lost from this cause 25 to 40 per cent. of plants received from an establishment where cuttings are made without regard to the buds.

Watch the Propagating Bench

The propagating bench is also, to a large extent, the source of mixtures in Dahlias. Necessarily, the cuttings have to be taken off when ready, and often come in small lots, and, as space in a greenhouse is expensive, they are put in the sand very closely, and after they begin to grow the foliage often hides the labels, making it very easy to get them mixed. And when top cuttings are taken from those started early the early mistakes are cumulative. It is, therefore, of the first importance that only first-class, well-trained help, should be entrusted with this work, and not all who are intelligent and apparently all right can be relied upon—I once knew a propagator who understood how to grow plants thoroughly, and was energetic and efficient in other respects but was pretty sure to mix whatever went through his hands.

Two years ago I employed a firm, who propagated Dahlias on a large scale, to propagate about 15,000 for me, for which I supplied the roots. Many of the resulting plants were all right, but in a lot of about 1500 sent to me for Prince of Yellows there were over 200 Perlhilde, which gave no end of trouble in culling out the next Summer when they were in bloom. Among the plants I sent them was a single root of W. W. Rawson, and nearly thirty plants were returned to me under that name. They were a very poor lot of plants and half of them died, but among those that grew there was only one W. W. Rawson and three other distinct kinds. As this place was too far away to investigate, I do not know whether any of the W. W. Rawson got into their collection by a counter mixture.

Last Winter I found a place nearby to get my propagating done and got very little mixture. In about 30,000 which I grew last Summer, in several hundred varieties, there was only fifty-two hundredths of one per cent. of mixtures, and this included nearly four thousand which I bought, in which there was considerably more than one per cent. of mixtures.

How "Mixtures" May Be Avoided

"Dahlia News" for November comes to the defence of Dahlia growers in the matter of mixtures, and give some reasons why they cannot always be avoided. I do not expect that any large grower will be able wholly to eliminate them. Notwithstanding the very small percentage in my crop last Fall, and that all of them were very carefully taken out before the others were dug, I would not dare to guarantee that there would not be a single mixture when sent out, although it is my constant aim to come as near as possible to that result. It is for the interest of every grower, as well as his customers, to send out nothing that is not true to name, and I believe that at least nine-tenths we now have are due to causes that might readily be avoided.

The Importance of a Large, Durable Label

Among the important precautions, labeling in the field is among the first, and my preference is for labels made out of something like a fence picket with the name painted on in large letters with a brush; but if smaller labels are to be used, they should at least be long enough to allow of being set firmly into the ground without covering the name or number. But labels are liable to get knocked out in cultivating, and it is not uncommon for mischievous boys to pull them out. The best method of guarding against such accidents is to commence planting at the left hand corner of the field and to number the varieties, planting so that the numbers will run consecutively. When one row is completed, go back and commence the next row at the same side with any that may be left of those planted in the previous row. Bear in mind that by following up this method they will succeed each other like the printed lines of a book. Then, by keeping in a book a list of the varieties, with their number and name as planted in the field, any variety can be easily located even if the label is removed. By allowing a little wider space between varieties, and going over and replacing missing labels when in bloom, especially just before frost, there will be but little mixing from this cause. [Mr. Bassett's conception of a field label is all right. Firm it into the ground 18 ins., paint the wood white, paint names on over the white in black, and that label will endure in good condition for two to three years.—Ed.]

Additional Precautions to Take

When the plants commence blooming and one is found out of place, dig it out and carry it away, unless it is some rare or especially fine variety. Never pull the roots out by the tops, leaving pieces with buds, nor throw down on the ground where they may live along and be gathered up with the others at digging time. In case of a specially valuable sort I set a light stake with something white tied to its top that will attract attention, and attach a wired label to the stem near the ground and, before digging the general crop, go over and take out all these mixtures and attach the labels firmly to the roots.

The next fruitful source of mixtures comes in the digging and storing, and it is very important that there should be one thoroughly competent and careful man in the field and another in the storage room to see that no mistakes are made. Every basket or box should have a

Aster Vimicus Golden Spray, White, Yellow disc. Height, 3 ft.

label so placed that it cannot be mislaid, it should be very plainly written and conspicuous. And, as far as possible, only take one variety in each load. Then when deposited in the storage room each bin or box should have the name of the variety it contains conspicuously attached in large distinct letters. I should also mention here that a very common source of mixtures is the throwing of two rows together when cutting tops and gathering together; it is better not to allow this at all, but rather to throw each plant down in the row where it grew.

Inexperienced Help Does Not Pay

"Dahlia News" refers to the chance of mixing by careless help when dividing. This matter of dividing may be all right for retail trade, but wholesale buyers should understand that divided roots are not worth more than one-third as much as undivided stock. But, if dividing is done, only one variety should be handled at a time, unless far enough apart to avoid all chance of throwing together, and when a variety is finished all fragments and rubbish should be scrupulously cleaned up and removed out of the way before another variety is taken in hand.

Now, I believe that if growers will adopt all these precautions there will be very few mixtures. Undoubtedly, I shall be met with the statement that competent help along all these lines cannot be had for \$1.50 per day, and we cannot afford the wages that such help can command. But can you afford not to do so? Would you, for instance, employ a cheap bookkeeper because he could be hired at small wages, and take the risk of loss and trouble from mistakes; and if you omit these precautions in the Dahlia business, can you face complaints from your customers with the statement that you are doing the best you can and that the mistakes are unavoidable?

Hammonton, N. J.

WM. F. BASSETT.

Behind Closed Doors

At a recent meeting of the Detroit Florists' Club the question came up as to the advisability of holding a flower show next Fall. No such event has taken place in Detroit during the last ten years, and the experiences at that time were rather sad because of a deficit of some \$500. Verily, this was no small matter for a small club, as it existed then.

Still, a matter of this kind must be looked upon from a much broader standpoint than that offered by dollars and cents. Today almost every industry eagerly grasps an opportunity to show its product to the public on a scale larger and more imposing than a show window accommodates, because by a concerted display of the different styles of product of any one industry is given the only opportunity to educate the public.

We florists have been in the education business for a very long time, but we shall have to stick right to it or else we fall back, never to come up again. This matter of holding shows, so universally practiced in even very small towns throughout Europe, has been, so far, rather sadly neglected in this country. Circumstances in Detroit are similar to those in other cities. We are all doing our share, we work out our individual problems and our trade increases as the city is increasing. Does that prove, though, that we are getting the full share of increase? Men will spend their money on articles they never thought of and acquire the habit of their use just because such use was demonstrated to them at some exhibition.

The flower display in some florist's window attracts our attention; even coaxes us to buy some, but what is that in comparison to an exhibition when a hall is filled up with flowers and plants demonstrating their use in most varied forms. This creates a lasting impression, which is bound to terminate in the purchase of our product now and in the future.

Many of us do not hesitate to spend occasionally \$30 to \$40 for newspaper advertising, but what is the result—practically nothing.

Of course the trend of time has put a dividing line to our individual activity. Some of us are growers; some of us are retailers; but is there any other division except in the form of labor performed? Indeed not. As the brain performs one part of work and the body another, so with the grower and retailer, but outside of that we are as closely affiliated and as dependent of one another as brain and body are. The division of spoils is equal to the work performed. It may be difficult to convince, nevertheless the facts are there to prove that neither grower nor retailer receives more or less than their just dues.

For this reason flower shows are just as indispensable for one as for the other, and the real goal cannot be reached unless both put their shoulders to the wheel and push along. Now, during these long but busy Winter evenings we can find plenty of time to make our preparation for a good and worthy exhibition next Fall.

FRANK DANZER.

MYOSOTIS DISSITIFLORA ELFRIEDE is another novelty by the same firm. It is a cross between *M. dissitiflora grandiflora* and *M. oblongata perfecta*. The flowers are large and of a lovely deep blue color, and are borne on long erect stems. It is valuable not only as a cut flower, but also for forcing.—*Bindekunst*.

The Carnegie One Hundred

On Saturday evening, the 8th inst., the barons of the Carnegie Steel Co. held their thirteenth annual dinner at the Fort Pitt Hotel, Pittsburgh. Preparation was made for one hundred guests at \$100 a plate; 78 attended.

The magnificence of this dinner has never before been equaled in Pittsburgh, and probably never surpassed in the country. But it was intensely private. It would have been easier to get an audience with the Czar of Russia than to have obtained admission to that dining hall when it was in course of preparation and decoration or after it was finished. Policemen and detectives, every moment, guarded every door and inlet, and personal influence availed one nothing.

Randolph & McClements had the decorations and Mr. McClements was in his element. Long, silently, secretly and prodigiously, he had been laboring in preparation for this event. Far and near he is known for energy, originality, refined taste and resourcefulness, and here he had the biggest opportunity of his life, and the finished work was the greatest glory of his career.

The spacious dining hall was a fairy dale of loveliness. The table was an extended oval, with the chairs on the outer side only. The whole space inside this oval was a great Water Lily garden in the extravagant gayness and luxuriance of advanced Summer, and filled unstintedly with aquatic, marginal and floating plants, night-blooming Nymphæas in flower, flitting goldfish, and a fountain in full play.

The ceiling was festooned with appropriate vines and flowers.

The surrounding walls, in the abandon of Nature, displayed the extravagance of Flora and Pomona—Spring, Summer and Autumn, each in its proper sphere.

Lattice work, imitation old stone walls, garden fences, gates, pillars, vases, sundries and other surroundings of a grand old Southern mansion home hid the walls of the banquet hall from view, and all was prodigal profusion. As room, variety and material were abundant, no stiff lines, no dense banks, no contracted effects, no harsh groupings obtained anywhere, but Nature, in her most graceful and informal plenty, was imitated.

Birds among the trees and flowery vines, entirely hidden from view, but singing as if their little throats might burst, put real life into the garden. And on the outer edge of the table thousands of choicest Roses were piled, forming as it were an embankment to the glistening lake behind them.

In this very hall, on the 26th and 27th of this month, the exhibition of the American Carnation Society is to be held.

WILLIAM FALCONER.

[See also Mr. E. C. Reineman's notes on this function in our Pittsburgh letter.]

Building Up a Retail Trade in a Growing Community

A paper read before the Florists' Club of Philadelphia, Jan. 4, 1910, by Educ. A. Stroud.

Your essay committee has asked me to address the Club on the subject of building up a retail trade in a growing community. I will tell you a few of my experiences and some of the methods I have employed in conducting a retail business which I established some years ago in Overbrook. It is possible for a florist in town to confine himself to a few departments of the business and make a success of it financially, but I do not think this is possible with a florist in the suburbs. To make his business a success he has to take up many different lines of work. He should be a landscape gardener, a grower of plants and flowers, a decorator, and in fact a general all-round man.

When a family has moved from the city, with its confined quarters and few opportunities for the cultivation of a taste in the planting of grounds, and, as a rule,

possessing little or no knowledge in this direction, it is of vital importance that the suburban florist be well versed in this department, so that he may advise wisely and correctly. If the florist is fortunate enough to have some ground, in addition to his greenhouses, where he can show his customers results which may be obtained in the immediate vicinity, he could give them object lessons; this, I believe, would accomplish more good than any catalog he could issue.

For examples: The hardy border, with the best and up-to-date perennials; the Rose garden; the Spring show of bulbs, Pansies, Forget-me-nots, and English Daisies; the Peony bed, with its varieties neatly labeled; the Summer garden filled with annuals and new Cannas; the Fall border with late Asters and Helianthus, followed by the hardy Chrysanthemums. Some years ago there was not a May-flowering Tulip in Overbrook; from the method described I sold this Fall some 15,000 bulbs, and from a small bed of Columbine last Spring I sold 1000 plants.

Now, of course, to carry on this business it is necessary to make desirable connections with the nurseryman, seed and plantsman, and also the wholesaler of cut flowers, acting as their agent. Let me give you an example. When Mr. A. comes along and admires a certain beautiful lily in bloom, and desires one, you take his order, go to the 'phone, order the same, and thus make a quick turnover with comparatively little labor.

My idea of a retail business in a growing community is to use the glass principally for show houses, keeping the houses supplied from the large growers. It is foolish to try to compete with them in the growing line. An important factor is the sale of house plants. There is scarcely a home in which there is not a growing plant. Then, too, a great many people enclose their porches with glass in Winter time, making a temporary conservatory to be filled with foliage and flowering plants, which of necessity must be replaced from time to time, making a profitable source of income.

The sale of Christmas and Easter plants is so universal that its importance need hardly be mentioned.

With Spring comes the Spring bedding, which, probably, taking the whole season through, embraces the biggest volume of work. Of late years this department has grown to such an extent that I depend entirely on the large growers of bedding plants, placing my orders early so as to insure a good quality of stock. It seems to me there is a great deal of money made in buying Geraniums at \$18 per 1000, out of 2½-inch pots, in February, and selling them for \$80 per 1000, from 4-inch pots, in May and June, than by growing them myself; besides, I can then confine myself to a few specialties which oftentimes I cannot buy.

Under the head of bedding plants comes the filling of porch-boxes. I have been trying to get away from the usual filled box of Geraniums, Coleus, Petunias, Verbenas and cheap vines, using instead such decorative plants as Crotons, Pandanus, Dracenas, Ferns, etc. The cost of filling such a box as I have described is considerably more, instead of \$2.50 to \$3, running from \$8 to \$10, but, wherever I have used them, they have more than pleased and repaid the purchaser; the reason being that they give an immediate effect combined with lasting qualities, if given proper attention. Also, at the approach of frost the boxes can be taken into the conservatory.

The sale of cut flowers is the next branch in importance. My experience has been that one cannot get, or expect to get, the same prices as the city florist receives, for the reason that in a growing community the florist caters almost exclusively to a family trade which wants the flowers but not the frills, considering a fancy, ribboned box unnecessary. I have found that people of wealth like to buy flowers frequently at moderate rates, say from \$1 to \$2 worth, but will not spend large sums except on special occasions, when they will go the limit. Even so, I have found at Christmas time very few among my customers who are willing to pay \$3 per dozen for red Carnations, or \$25 per dozen for American Beauty Roses. To meet this demand for moderate prices, I have had to grow flowers which will satisfy the buyers, and at the same time give me a profit. These flowers which I grow for this purpose cannot always be bought at the wholesalers. The following varieties are some of them: Starting in the Fall, Dahlias, Cosmos, hardy Chrysanthemums, Paper White Narcissus; later on, Stocks, Wall-flowers, Schizanthus, Daisies and indoor bulbs; following with the Spring flowers, Peonies, Sweet Peas, Spanish Iris, outdoor grown bulbs, etc.

I have an arrangement by which I supply flowers once a week, on any day the customer desires, at \$1 and upwards a week. This plan has met with fair success.

In decorations, the public seems to have more confidence in the town florist, thinking that he is necessarily more up-to-date and more competent. It is only by showing the people that we are capable of doing the same work as the town florist that we are able to get them to trust us with their orders. Decorating—proper use of flowers and plants—is an art which cannot always be acquired. It is not merely the mechanical part but the knowing how to blend colors, and make the proper arrangement to give the best effect. I have seen a bouquet spoiled where the mechanical work was excellent, but where the ribbon with which it was tied did not blend in color, and the trade of an artistic person was lost by this error. I feel we are in a transition stage in our

The Carnation Convention at Pittsburgh

The Florists' Exchange issues of Jan. 22 and 29, also of Feb. 5, will be essentially Carnation Numbers. (See advertisement on editorial page.) Very many of our readers are equally interested with the disseminators in the behavior of all the leading varieties of Carnations on the market, and to these we extend a hearty invitation to send us in for publication a summary of their experience in 1909 and their suggestions for 1910. Write now while the mood is on you.

Florists in good standing throughout the country can avail themselves of the advertisers' offers in this Department and accept, without hesitation, orders from their local customers, transmit same to an advertiser in these columns, and thus avail themselves of the opportunities for extension of trade which are open to all. Let your customers know you fill orders by telegraph to any part of the country.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail firms advertising under this heading are all considered by the publishers of The Florists' Exchange as being responsible, and will accept and fill orders for Flowers, Plants and Floral Designs for Steamer Orders, departing Trains, or any given point within their reach, forwarded them by mail, telegraph or telephone in the respective districts to which their trade extends, the usual commission being allowed. While no guarantee is expressed or implied by this paper as to the satisfactory fulfillment of orders sent to parties whose names appear in this Directory, we will state that only concerns of known good standing will be admitted in this Department. The use of Arnold's Telegraph Code No. 16, a copy of which is placed in the hands of every advertiser, will greatly facilitate this interchange of business.

Eyres ALBANY, N. Y. 11 North Pearl Street

Cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Atlanta Floral Co. ATLANTA, GEORGIA 41 Peachtree Street

We cover all of Georgia and are within easy reach of New Orleans, Jacksonville, Birmingham, Chattanooga and Charleston. Retail orders placed with us will receive careful attention.

Thos. F. Galvin BOSTON, MASS. 124 Tremont Street

We cover all New England points. Retail orders placed with us receive careful attention. The delivery of flowers and plants to Boston sailing steamers a specialty.

J. Newman & Sons BOSTON, MASS. 24 Tremont Street

Orders by wire receive prompt and careful execution. We can refer to leading florists in all principal cities. Established 1870.

Robt. L. Wilson BROOKLYN, N. Y. Fulton St. and Greene Ave

Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders cared for from all parts of the country and delivered at Theatre, Hotel, Steamer or Residence. Tel.: Prospect 2840 and 4065.

Palmer's Flowers of Quality BUFFALO, N. Y. W. J. PALMER & SON, 304 Main St.

Hauswirth CHICAGO, ILL. The Auditorium Florist, 232 Michigan Ave.

The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

JULIUS BAER, CINCINNATI, O. Fourth St.

Frank F. Crump COLORADO SPRINGS, COLO. Retail Florist

Telegraphic orders will be carefully and promptly filled; personal attention given. Usual discounts allowed.

W. S. Matthews DAYTON, OHIO Florist, 16 West Third Street

Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

The Park Floral Co. DENVER, COLORADO 1706 Broadway

J. A. VALENTINE, Pres. Orders by wire or mail carefully filled; usual discounts allowed. COLORADO, UTAH, WESTERN NEBRASKA and WYOMING points reached by express.

John Breitmeyer's Sons DETROIT, MICH. Broadway and Gratiot Ave.

We cover all MICHIGAN points and large sections of OHIO, INDIANA and CANADA. Retail orders placed with us will receive careful attention.

business, when new methods and new ideas are needed. What was considered beautiful ten years ago is in many cases distasteful now. One point in which we are far behind other lines of business is in advertising. I would advocate the sending out, with the monthly bills, a small card calling attention to some specialty which we have for sale during the next month. I am anxious to see our business put on a higher plane, to make it more of a profession, not mere labor. It is a shame to see the way the shrubbery is butchered in our suburbs, just because the work is entrusted to anyone who comes along. We are far behind our European neighbors horticulturally, and we can only attain to their high standard by teaching the people that their grounds, gardens and plants should be taken care of by a man who has been trained in all departments of the business.

There is great need for young men in this work. I would like to see courses on floriculture started in our colleges, on the same plane as the courses in agriculture. For experimental purposes the public parks could be utilized. The school gardens are a step in the right direction. I do not know what our florist clubs are doing to help along this work, but they should help, as people are becoming more cultivated; the love of the beautiful is growing, and it is time for us to wake up. In many cases the public is far ahead of the florist, knowing far more about the business in general than he does.

I am afraid the desire to get money quickly has done more to put our business on a wrong basis than anything else. So many people have been advised incorrectly, and have gotten such poor results, after a large expenditure of money, that they have given up in despair.

In conclusion, I would not advise any one starting a business in a growing community unless he is well trained and has sufficient capital to purchase enough ground, to erect a store, office and greenhouse—in a prosperous locality. Even with this equipment it will require patience and probably a loss of money until one is thoroughly established, after which I see no reason why it should not be a profitable investment.

The John Breitmeyer's Sons' Store at Detroit

Our picture gives a partial view of the interior of the store of John Breitmeyer's Sons, much talked of and admired by all who have had an opportunity to visit the same.

The store is located on a corner and covers a ground space of 40' by 50', has five large show windows with Mosaic platforms and white marble sidings. All the walls are decorated with marble shelvings and large looking-glasses. The principal fixtures are two small round and two large long tables; the heavy green marble table plates are held up by white marble lion heads, three of which are always combined in an allegorical way. A large icebox, cooled artificially, covers half of the back wall. The office is to the left of the entrance.

The idea governing the planning and execution of this store interior was the fact that people in the habit of living in palatial surroundings desire to do their shopping in similar places. Flowers of value must be shown in valuable receptacles, therefore cut glass is in abundance.

FRANK DANZER.

F. E.—The Best Advertising Medium.

Bridgeport, Conn.

Bridgeport is a manufacturing town and while the local prices of florists are somewhat lower than those of the majority of cities of equal population, the amount of sales somewhat equalizes the condition. There is a partial agreement among the majority of local florists in that they observe equal closing hours and work together much better than in some other cities; and, with a few exceptions, they are all friendly with one another.

A good Christmas trade was done. While most of the florists handled Christmas trees this year they contemplate next year dispensing with this feature. A novelty here is table trees in pots, which meet a ready demand at prices ranging from 25c. up to 50c.

James Horan & Sons have a nice store located on the corner of one of the main streets near the center of the city. The window space is unusually large in comparison to the size of the store, and during the Christmas holidays was attractively decorated with made-up pots and baskets of Poinsettias, Ferns, Ficus and Cyclamena. The greenhouses are on Fairfield ave. and comprise some 60,000 ft. of glass. One house is devoted to some large plants of Camellias in bloom. This house is somewhat of a novelty as there are few in the country devoted to this kind of stock. About 15 men are employed by this firm and all stock grown is sold in the store. A recent order was for a casket cover of Chadwick Chrysanthemums. The Christmas business exceeded that of the previous year.

One of the newest stores in town is that of R. H. Hawkins, who opened September 1, after spending some 18 years with the firm of James Horan & Sons. This location, 1223 Main st., is close to the railroad station and next door to the new Stratford Hotel. The store is unusually attractive at this time, being nicely dressed for the holiday trade and all hands are extremely busy. The best selling stock is made-up baskets and pots of Poinsettias.

The West End Florists, 1009 Broad st., have the largest store, and are located nearly opposite the post office and City Hall. This store is the oldest in Bridgeport and was formerly owned by Mr. Bassick, but is now conducted by Mrs. Herthal. Mr. Herthal is connected with a New York landscape gardening firm and has charge of considerable work on Long Island.

Fred S. Jackson, 927 State st., has been in the business for the past forty years and has had his present store for the past five years. Mr. Jackson was the only local florist to handle Anderson's Poinsettias and reported some good trade in them.

Geo. B. Whitehead of Green Farms, Conn., was a visitor at one of the local stores. Mr. Whitehead has ten houses, 20x100 ft., from which he does a wholesale business in Callas, Carnations, Chrysanthemums and Poinsettias. He reports exceedingly good Christmas trade, much better than previous years.

Jas. E. Duggan recently opened a store at 1124 E. Main st., East Bridgeport, under the name of East Side Florists. He was formerly connected with the West End florists.

John Reck & Son have a nice store at 985 Main st., in the center of the business district and three double bulk windows were filled with made-up pots and baskets of Poinsettias and Ferns grown at their greenhouses, 162 Oak st. This firm started in 1874 and have at present nearly 45,000 ft. of glass devoted to Roses, Carnations and a general assortment of stock for the retail store. J. N. Jakobsen is foreman of the greenhouses and has been here for several years, coming originally from Denver. G. C. Borton & Son, 408 Warren st., have one house of 2500 ft. devoted to Carnations and bedding stock. They built the greenhouse during the past Summer and are figuring on another house during the coming Spring. This firm is about seven years established and their location is conducive to good trade. A number of promising seedling Carnations are shown and are being given a good "try-out."

A visit was made to Marina Park, formerly the home of P. T. Barnum, for the purpose of seeing a much talked of Privet hedge. This hedge is nearly 700 ft. long, broken by a single driveway, and one end of it, 200 ft., is 6½ ft. high and 5 ft. wide, as clean cut and thick as any to be seen in many a day's journey.

Chas. Pfomms Sons, at 1167 Barnum ave., have several greenhouses devoted to retail trade, and they report good business in funeral work. This firm have a series of leaflets giving cultural direc-

tions, which they hand out to purchasers of potted stock and seeds. The directions cover in detail the care of the plants and save a lot of unnecessary talk on the part of the florist. This idea can easily be followed by any florist and should be.

Geo. O. Borton & Co., 1342 Park ave., are exclusive agents for Thorburn's seeds, in which they have a nice trade. This firm is making plans to build additional glass in the coming season, in which they will grow Spring stock and vegetable plants.

Julius Reck, of the Woodlawn Conservatories, has some 3000 ft. of glass on Woodlawn ave., in which he grows Carnations, Violets and bedding stock. He came here eight years ago from Villa Nova, Pa., where he was employed by W. H. Maule, and has been in his present location for the past three years. He recently took a trip to Europe and returned with a number of novelties which he is testing, one is a Dahlia with a 6-in. spread. He has a nursery of hardy perennials, in which stock he has a good trade.

F. C. Schleichert has thirteen houses, containing about 30,000 ft. of glass, devoted to general mixed stock for cemetery work. He returned a short time ago from a European trip, bringing back a large stock of bulbs and evergreens for his nursery and landscape work, and a number of plant novelties. He has been in the trade for the past fifteen years and for the last few years in present location on Reservoir ave.

James Beach has 110,000 sq. ft. of glass at 2019 Park ave., in which he grows everything from Chickweed to American Beauty Roses. Some Callas were shown with 5-ft. stems. On this range are grown 75,000 Geraniums, 15,000 Chrysanthemums and a large number of Carnations, among which are some excellent seedlings, one, a good pink, is called the "seedless" from the fact that a customer heard them give an order over the phone for the seedling and she now orders what she thinks are the "seedless."

Rochester, N. Y.]

Business since the opening of the new year has been entirely unsatisfactory to all concerned, as for the past few weeks there has been practically nothing going on to make use of any flowers, with the exception of a few busy days of funeral work; these, however, are of short duration and help out very little when not accompanied with a demand for cut flowers from the flower buying public.

Colored Carnations are a glut on the market and almost impossible to move, and the demand for Violets has also suffered; however, the very cold weather may have much to do with this condition. All are optimistic enough to say that the present dullness is only a fleeting one; and in a week or so, no doubt, things will be going along nicely. Current prices prevailing for the week were as follows: Roses \$5 to \$10; Carnations \$2 to \$4; Violets \$1; Valley \$4; Paper Whites \$2.50 to \$3; Narcissus Golden Spur \$4; Romans \$2.50 to \$3; American Beauty Roses \$5 to \$35, quality not up to standard.

The many friends of Herbert Green-smith received with much regret the news of his daughter's death, published in last week's EXCHANGE.

Commercial Florists' Association

The annual meeting and election of officers of the Commercial Florists' Association was held on Monday evening, January 10, in the new headquarter room, 416 Cutler Building. The Association at this meeting started on its third year as an organization under the most favorable auspices, namely, a bank account of some \$1300 and a membership roll of 120 members, all enthusiastic and united to work for the upbuilding of an organization worthy the name of Rochester.

The most important business of the evening was the election of officers, the nominating committee presenting two tickets on which, after much good-natured discussion, the ballot was taken and the officers of 1909 declared elected to serve for the year 1910. After the business of the evening was disposed of refreshments were served, and a sociable evening spent in conversation in reference to the future of the Association and the coming convention, which latter is beginning to be a subject of lively interest among the members of the trade.

A meeting of the Association will be held Monday evening, January 17, for the purpose of discussing the proposed revision of the by-laws, and it is especially desired that a large number of members will attend and discuss this important subject.

H. B. STRINGER.

JUST PUBLISHED

Webster's NEW INTERNATIONAL Dictionary, (G. & C. Merriam Co., Springfield, Mass.) surpasses the old International as much as that book exceeded its predecessor. Editor is Chief, Dr. W. T. Harris, former U. S. Com. of Education. The definitions have been rearranged and amplified. The number of terms defined has been more than doubled. The Etymology, synecisms, pronunciation, have received unsparing scholarly labor. The language of English literature for over seven centuries, the terminology of the arts and sciences, and the every-day speech of street, shop, and household, are presented with fullness and clearness. Its size of vocabulary, its richness of general information, and its convenience of consultation, the book sets a new mark in lexicography.

400,000 words and phrases.

**THERE'S MONEY IN FARMING**

If you understand Modern Methods and FARM INTELLIGENTLY

Every reader of the Florists' Exchange who is interested in farming or gardening, in the growing of fruit or flowers, is invited to send for a free copy of our 80-page catalogue and full information in regard to the Home Study Courses in Agriculture, Horticulture, Landscape Gardening and Floriculture which we offer under Prof. Brooks of the Massachusetts Agricultural College and Prof. Craig of the Cornell University. The Home Correspondence School Dept. 77 Springfield, Mass.

Commercial Violet Culture
Price \$1.50
The Florists' Exchange, 2 to 8 Doane St., N. Y.

Greenhouse Wrecked by Explosion

Chas. R. Tusson's store, adjoining his greenhouse, in Windsor, Ont., was wrecked Wednesday, Jan. 12, by an explosion of natural gas. A leak had been suspected for several days. One of the employees, Miss Winters, was looking for it with a lighted match when the explosion took place. Fortunately, nobody was injured. Damage, \$2000, fully insured.

F. DANZER.

Milford, Conn.

R. H. Comstock Co. have 8000 sq. ft. in which they grow a large quantity of Ferns; Boston and Scottii are the leaders and a good-sized shipping business is done in this stock. They also grow Carnations and bedding plants to supply their local trade. Mr. Comstock came here about eleven years ago from Clinton, Conn.

Bridgeport, Conn.

Fred. S. Jackson was taken sick while visiting friends in Danbury on Christmas day, and was confined to his house for about two weeks.

E. B. Jennings of Southport has two houses devoted to Pansies and shows some blooms of excellent coloring and splendid size. The majority are of the light color mixtures. Mr. Jennings has been connected with the floral business for the past 50 years and makes a specialty of Pansies, of which he grows large quantities, both under glass and in the field.

Geo. B. Whitehead of Greens Farms, Conn., has nearly 18,000 sq. ft. of glass devoted to wholesale shipping trade in Carnations, Chrysanthemums, Lilies and Spring stock. His Lilies, both Harrisii and longiflorum show promise of becoming good stock in time for Easter. Mr. Whitehead was formerly in the retail business in Bridgeport, but for the past five years has given his entire attention to wholesale growing.

Oswego, N. Y.

Trade continues remarkably good; there has been a noticeable increase in large out-of-town funeral orders, which has kept stock well worked up.

Christmas trade was good, about the same as last year. Owing to the advance in the price of cut flowers there was a larger sale of pot plants. Cherries, Primulas and Poinsettias sold well; higher priced stock, such as Azaleas moved slowly.

Holly was not up to grade but was sold out as the trade bought cautiously. Wreaths were good and sold well.

In cut flowers Richmond and Killarney Roses led; red and pink Carnations had the next call. Violets sold well; Valley, Romans and Paperwhite Narcissus were not in much demand.

Stewart was fortunate in having his Carnations in just right, and had a big cut.

W. Workman's stock of pot plants was very large and complete; his Primulas, Cyclamens, Poinsettias, Cherries and Azaleas were remarkably good, and he sold out.

H. Y.

Pasadena (Cal.) Gardeners' Assoc.

The annual election of officers of the Pasadena Gardeners' Association was held Jan. 7, with the following result: President, Otto Hentschke, re-elected. Vice-president, James McGillivray. Secretary, Angus McLeod, re-elected. Assistant secretary, G. W. Johnson. Treasurer, Wm. Hutchinson, who is not only a skilled gardener, but a singer possessed of a wonderfully beautiful voice. Trustee, W. J. Loomer.

This Association, now entering on its fifth year, is remarkable for four things: 1. The regularity of its meetings, twice each month since its organization; 2. The large attendance at every meeting; 3. The harmony existing among its members; and 4. The unprecedented record of founding a monthly magazine, The Pacific Garden, not with any hope of financial gain, but from altruistic motives and loyalty to the land of their adoption, that through it, their fellow men who, like themselves, have an inherent love of flowers, may acquire a knowledge of plant life and its successful cultivation on this Coast with its peculiar climate.

To those who have never seen the periodical I wish to say that it is printed on the best book paper obtainable and illustrated with half-tone cuts of the finest specimens of native and exotic subjects of the vegetable kingdom found growing in southern California.

For Quick Sales

To Progressive Carnation Growers Looking for Profits

You are looking for the variety that will show the most profit, plus the greatest satisfaction to your customers. Very well, this Carnation will do both. Dorothy Gordon is vigorous and disease-free, with flowers of uniform color—a shade darker than Pink Enchantress.

It produces at least a third more Carnations than does Enchantress, and much larger—average flowers of Dorothy Gordon measure 3 inches or more in diameter. It has a stiff stem, and is a long keeper.

Carnation Dorothy Gordon

It has regularly brought us double the profits of the leading commercial sorts—Enchantress for instance. Let us illustrate: "Enchantress" sells at wholesale in the Philadelphia markets at \$6 per 100; "Dorothy Gordon" has regularly brought us \$9 per 100. In addition, "Dorothy Gordon" produces easily one-third more flowers, or an additional \$3—giving a return of \$12 from the same greenhouse space that would be required to grow \$6

worth of "Enchantress!"

We are selling strong rooted cuttings at \$10 per 100, or \$76 per 1000. We are ready to demonstrate to you that you can grow Dorothy Gordon with greater profit than any other commercial Carnation. We invite you to come to Wyncote and see it growing in our houses; if you cannot do this, write for full particulars—we'll furnish some Carnation facts that will interest you!

JOSEPH HEACOCK COMPANY, Disseminators, Wyncote, Pa.

A new Carnation Seedling of wonderful merit will be offered to the Florists' Trade in February, 1910. Orders booked now. This Carnation.

"The Constant"

Grown by Wm. Bester, of Hagerstown, Md. Color between Rose-pink and Winsor. Produces long stems and large blooms from October to June. Free of any disease and no cropper. Calyx perfect. Blooms keep in good condition ten days. This Carnation grown and tested by Mr. Bester for three years and all points guaranteed. The original seedling produced under the most scientific cultural conditions, and will supersede the Lawson. Price for Strong Cuttings, only \$10.00 per 100, \$90.00 per 1000.

C. S. FORD, Box 4515, WEST PARK PHILADELPHIA, PA.

Established 1881. Florists' Supplies, Novelties, etc.

CLUBS and SOCIETIES

Elberon (N. J.) Hort. Society

The Elberon Horticultural Society held its first meeting of the new year on January 2, president Peter Murray in the chair. The competitions for points resulted as follows: C. Duncan, for Freesia Purity 85; A. Bauer, White Perfection Carnations, 85; W. Seymour, Enchantress Carnations, 75c. The next meeting of the Society will be Carnation night, January 17. As Carnations are very good in this section, we look for a nice display.

ALEX. FLEMING, Cor. Sec.

New Jersey Floricultural Society

A regular monthly meeting of this Society is to be held on Friday, January 14, in its rooms in the Lindsley Building. The annual installation exercises for the new officers will be held and reports as to the condition of the Society, etc., given.

The following officers will be installed: President, Albert F. Larson, gardener to A. B. Jenkins; vice-president, Detrick Kindergab, gardener to Wm. Runkle; secretary, William Reid, gardener to S. & A. Colgate; treasurer, Walter M. Gray of Maplewood.

JOSEPH B. DAVIS, Sec'y.

Milwaukee Florists' Club

The Milwaukee Florists' Club held its regular meeting Thursday evening, January 6, and installed the newly elected officers: Nic Zweifel, president; Alexander Klokner, vice-president; Eugene Oestricher, secretary; J. G. Helman, treasurer.

The weather was exceedingly cold, which kept down the attendance somewhat, nevertheless the Club had a very successful meeting. It was voted to hold another flower show next Fall and a guarantee fund to that effect is now being made up among the Club members.

The Club holds its regular meeting monthly, on the first Thursday of each month. Meetings are held in the Club rooms at the Quiet House, corner of Mason st. and Broadway. Officers are elected at the meeting in December and installed at the first meeting in January.

C. C. P.

Detroit Florists' Club

There was a significant contrast between out of doors and the inside of the meeting room. While some razor-edged winds cut late cheeks and ears out doors, rather overheated arguments caused blisters on the feelings of some of the members, and all this over the question of be or not to be—flower show or no flower show. Finally, the angel of peace arrived, harmony settled down and a decided vote in favor of a flower show next Fall was cast.

Our ever alert president got busy at once and formed the following committees:

Arrangements: Wm. Dilger, Fred Breitmeyer; Alb. Pouchelon, Walter Taepke; prizes: M. Bloy, Herm. Knope, Wm. Brown, Robt. Klage; finance: Alb. Pouchelon, Frank Danzer, J. F. Sullivan, A. von Boeslager; entertainments: Wm. B. Brown, C. A. Scribner, Robt. M. Rahsley, S. Stock; advertising: Frank Danzer, J. F. Sullivan, Hugo Schroeter.

This at last has set the ball rolling towards a Fall flower show, the last one of which was held ten years ago in this city. Verily, time we should wake up!

The annual entertainment and dance for members and their friends will be at Harmonie Hall, January 12.

FRANK DANZER.

Florists' Club of Washington, D. C.

The Club, in connection with its regular monthly meeting held at 1214 F st. on the evening of January 4, gave a "Colonial Smoker" to those present, presenting as a souvenir to each guest a clay pipe with the "Whole Damm Family" and the dog represented in miniature, protruding from the bowl of the pipe.

The attendance was larger than usual, but little business was transacted, the attention of the Club turning at once, upon the next meeting night when it was proposed to have the ladies present and enjoy a banner social evening. Accordingly, Pres. Kramer appointed the following as a committee to select a suitable place for the entertainment and arrange programs: Geo. H. Cooke, Wm. F. Gude, Wm. Marche, Edw. S. Schmid and W. W. Kimmell.

A resolution was favorably passed by which an amendment to the constitution and bylaws of the Club was adopted, changing its present form for receiving new members. The amendment instead of allowing a candidate to make application for membership and be admitted on the same evening restricts his acceptance until after an investigation by the newly formed credential committee consisting of O. A. C. Oehmler, W. W. Kimmell and M. Bolling. Refreshments were served and it was past midnight when the Club members realized that the large Gude clock, had not been "stopped to save time."

JAS. L. CARBERY.

The Carnation Convention at Pittsburg

The Florists' Exchange issues of Jan. 22 and 29, also of Feb. 5, will be essentially Carnation Numbers. (See advertisement on editorial page.) Very many of our readers are equally interested with the disseminators in the behavior of all the leading varieties of Carnations on the market, and to these we extend a hearty invitation to send us in for publication a summary of their experience in 1909 and their suggestions for 1910—Write now while the mood is on you.

NEW CARNATIONS

The two prize winning introductions of the Cottage Gardens.

MRS. C. W. WARD

MRS. C. W. WARD is a perfectly formed flower with full center; color deep pink several shades lighter than Lawson, deeper than Winsor; having strong, erect stems 24 to 36 inches in length. A vigorous, healthy grower and has never shown disease of any kind.

AWARDS

Society of American Florists, Silver Medal, Boston, 1906; The Craig Cup for Best Seedling, Philadelphia, 1906; The Lawson Bronze Medal, Washington, 1908; The Horticultural Society of New York Silver Medal, Sweepstake prize for best 100 blooms, New York, 1909; The Horticultural Society of New York Diploma, for best new variety, New York, 1909.

PRICES FOR ROOTED CUTTINGS

\$2.00 per 12, \$12.00 per 100, \$100.00 per 1000. 25 at the 100 rate, 250 at the 1000 rate.

ALMA WARD

This beautiful Carnation is pure white except during dark weather when it shows delicate splashes of pink similar to the Cattleya Orchid, increasing its popularity.

ALMA WARD is the largest and most fragrant Carnation ever grown, producing perfect flowers 3½ to 4½ inches in diameter on strong, erect stems 36 to 42 inches in length.

AWARDS

The Lawson Silver Medal, Toronto, 1907, (No Gold Medal having been awarded); The Lawson Gold Medal, Washington, 1908; The Society of American Florists' Silver Medal, Washington, 1908.

PRICES OF ROOTED CUTTINGS

\$3.00 per 12, \$5.00 per 25, \$9.00 per 50, \$15.00 per 100, \$35.00 per 250, \$65.00 per 500, \$120.00 per 1000.

Delivery February 1st. January Cuttings all sold.

These varieties bring from \$2.00 to \$4.00 per 100 more than any other Carnation sold in the New York market.

We wish to impress upon our readers that all questions intended for this department must bear the name of the sender, not necessarily for publication, but as a guarantee of good faith. We will endeavor to answer all questions submitted to us by subscribers, but we cannot recognize anonymous communications.

IDENTIFICATION OF PLANTS

When sending specimens for name correspondents should send some lower leaves of herbaceous plants as well as upper ones, and of all plants, flowers and seed vessels if possible. In addition to this, if stated whether it be shrub, tree, herbaceous, wild or cultivated, location where growing, it would often enable identification of specimens difficult to determine otherwise.

(12) **Palm Leaves Infested.**—Herewith samples showing incrustation of a hard, black scale. Kindly advise me how to get rid of the trouble.—H. M., N. Y.

—If your Palm leaves are very badly infested with scale would advise a thorough hand washing after which a regular fumigation or spraying with Aphine, Nicotinic, or some other equally effective insecticide, every two weeks.

(13) **Dracena Indivisa Diseased.**—Enclosed I send you a few leaves of *Dracena indivisa* showing a disease which I think is a sort of scale. I have washed them with a strong solution of whale-oil soap, mixed in warm water. I washed them leaf by leaf about two weeks ago and now they are starting to get full of it again. Please let me know what to do for a remedy?—A. S., Ohio.

—We notice that the scale on your sample leaves is apparently young, and would impress on you the need of frequent sprays of insecticides (as advertised in our columns) at least once every week until you have them in check, underneath as well as above the foliage. By keeping at it you will eventually destroy all the pests.

(14) **Ants on Carnations.**—Please inform me through your valuable paper, a remedy for ants on Carnation flowers; they are so bad they eat into the calyx while flowers are still in the bud; they are ruining my whole house. Be sure and answer this week.—E. L., New Jersey.

—Your trouble is a serious one, and has been seldom met with in our experience. If you can locate holes or nests of the ants in the soil make several small holes carefully about 4 to 6 inches deep, 9 inches apart, into each pouring about a tablespoonful of bisulphide of carbon closing the holes immediately to prevent fumes arising. This will kill anything within reach. Procure liquid from the local druggist. Ants generally have regular runways, watch for these and place near them several small quantities of sugar, honey, cookies, or anything sweet. This has first been liberally sprinkled with Paris green, London purple or some other poisonous powder. Do not excite the suspicions of the ants, they are intelligent insects and you may drive them away temporarily to appear in greater numbers elsewhere. Be patient, and you will win out. Let us know how you succeed. Perhaps a reader can supply a different remedy.

(15) **Bordeaux Mixture.**—I notice in your issue of January 1 an article on fungus on Palm leaf. Will you kindly tell how to make a weak solution of Bordeaux Mixture and how to use it?—M. C. S., Louisiana.

—Dissolve 6 (six) pounds of sulphate of copper in 4 (four) or more gallons of water. In another vessel slake 4 (four) pounds of quick lime (6 pounds air-slaked) in a small quantity of water. When the latter mixture has cooled it is poured into the copper solution, care being taken to mix the fluids thoroughly by constant stirring, and add water to make about 40 gallons of mixture. Stir before applying. This is a normal Mixture. (Gironde.)

HEATING QUERIES

Conducted by U. G. Scollay

Inquirers Read This

Subscribers asking questions for Heating Problems must be particular to give the following: Length, width, height at ridge, height at eaves, glass on sides, glass on ends, position of house as regards points of compass, grade of house, location of boiler pit, size of boiler pit, depth of boiler pit, size and location of chimney, temperature desired in each house, whether steam or hot water is used for heating, number of pipes and

size in each house, dimension and position of benches, location of doors. The above information I must have before I can answer any definite questions regarding any heating plants already installed.

If the inquiry is for proposed new house or houses, send full measurements of the houses as described above, including glass, proposed location of boiler pit, proposed location of chimney, position of house as regards points of compass, temperature required of purposes for which the houses are intended; whether steam or hot water heat desired.

Subscribers who may contemplate asking for information regarding heating apparatus are particularly requested to cut this out, so that when they write, the questions will be answered fully, and will save time and help the writer materially to arrive at the proper conclusions.

U. G. Scollay.

Mr. U. G. Scollay, who kindly answers the questions in this department, as President of the Master Steam and Hot Water Fitters' Association of New York City has been entirely occupied with the duties of that office for the past five weeks, in connection with a strike and the making of a new agreement, which fact, he trusts, will satisfactorily explain the delay in answering the questions submitted.

I intend to build an addition to my present greenhouse, according to the enclosed diagram, which will be 20' x 20', also a lean-to 6' wide on the southeast of the boiler shed. I wish to run a 2" main from the boiler up near the ridge to the southwest end of the house, thence returning with 1 1/2" pipes for radiation. Will you kindly advise me how many of these I will require and where to locate them? The only bench in the house will be a 3' bench joining the boiler shed, the balance to be in raised beds. The only exposure to severe winds is on the southwest end, and that is partly protected. J. M. B., New Jersey.

—If you have decided to use 1 1/2" pipe for most of the heating surface, would advise using two 2" flows instead of one in this house. The balance of the heating surface in coils of 1 1/2" pipe, consisting of twenty-five runs of that size. In the lean-to have one 2" flow, and eight 1 1/2" pipes in coils. The above will give you a temperature, providing you have sufficient boiler power and good circulation, of at least 60° to 65° in zero weather, cannot very well tell you where to locate the 1 1/2" coils, for your sketch shows no position of beds. You can divide the coils up so that they will be distributed in the pathways, and hung on the side walls of the beds. I would divide these 1 1/2" in the 20-foot house into at least four coils.

Here is a problem for the heating column of the Florists' Exchange. I have a Pierce, Butler & Pierce boiler No. 1512, supposed to carry 400' of 2" pipe or 250' of radiation. I have this boiler installed in a small greenhouse 12' x 25' and located in it as per the enclosed sketch, but I can not get it to heat up more than 44° even in mild winter weather; somehow or other the circulation is not good. Have got to have a real good fire to even get it to 44°, and yet it is supposed to heat a house 12x55 to 60° with cold weather on over the bench and in the Catskill Mountains, at an elevation of 2600 ft. above tide water, and have no city water pressure. The boiler is set in a pit 2' deep, in one corner of the house. There are two systems coming out of the boiler, one on each side of the house, with one flow over the bench and a coil of two 2" pipes under the bench and coming back to the boiler. In coming back to the boiler both systems join and enter as one through 2" pipe. In fact, the house is piped with 2" pipe throughout, except under the middle bench where a 1 1/2" pipe leaves the flow near the expansion tank, and drops under the bench running in one pipe to the farther end of it and coming back in a coil of 2 pipes 1 1/2" and entering the return of one of the systems at the point marked A. Would say that this middle system has a gradual drop of 2 1/2' to the foot. The water does not get hot so that one can't lay one's hand on the boiler, no matter how good a fire. Would say that the pipe over each side bench marked B runs close to the glass, 6" away from it. The question is where is this piping wrong and how can I remedy it? Or if it is long altogether, how should it be piped? Keeping in mind that I have an addition on the end of it, 12 x 25, more to pipe and connect with the present piping, which will then be the supposed capacity of the boiler. I have tried to tell you all points so you could advise more intelligently, but if any other information is wanted will gladly send it. I want to keep the house at 50°. W. H. S., New York.

—You state that the boiler is a No. 1512 Pierce, Butler & Pierce, and that company rates, for hot water, this boiler at 400 sq. ft. I would not care to place on it, according to their rating, any more than 500' of 2" pipe for greenhouse purposes. Probably you are wrong in the number of boiler you give me. But as-

suming that the boiler is rated at 250 sq. ft., as you state, and not 400 as the makers state, would say that I would not like to put on it more than 300' of 2" pipe. The boiler is a decent large enough for your present wants, and you I will therefore offer suggestions as to why your circulation is not better.

The matter that bothers me most, is the fact that you say you never get the boiler very hot. This leads me to suppose that you do not have a good fire even though you may think so. Try this boiler with small size coal, say nut size. Is your draft good? There is evidently something more the matter than the piping, for you certainly should be able to get the water very hot in the boiler.

You have sufficient piping, assuming that your sketch calls for two 2" pipes under each side bench, and three 1 1/2" under the middle bench, also one 2" pipe over each side bench, to maintain about 50° in zero weather.

After looking up the fire question, see if you have a steady rise in the flow pipes from the boiler to the cross section on which the expansion tank is located. I assume from your sketch that you vent through the expansion tank. Be sure from the cross pipe, which you state runs level, to flow toward the far end of the house, and from there back to the boiler, with any traps in the pipes, whatever. The return connections from the coils to the mains would best be in the side of the main. How much higher are the coils under the benches than the return openings in the boiler? You should try to obtain as much height as possible, and for that reason I would suggest that if you will lower the boiler pit you will get better results. I can see almost positively that your trouble is either in a bad draft, or the apparatus is air bound or trapped, or a combination of both. I should be glad to hear from you further after you have adopted my suggestions, when I can be in a position to answer your requirements better.

We have a house built 46' x 12', running east and west; north wall 8', made of boards and plastered; also top and ends same way, door in each end; south wall 9' high of 12' x 16' D. S. glass. How can we best heat it to prevent freezing in zero weather? Just above freezing is all we want. S. S., Louisiana.

—Place five 2" pipes in this house, and you will easily maintain 40° or less if you desire. Get a small hot water boiler having a capacity of about 200' of 4" pipe. These pipes can be placed on each side of the house. One coil on the side with the glass, consisting of one flow and two returns, and the other one on the floor and one return. I suppose you know the necessary precautions, grade up from boiler to the far end, fitted with air cock, at highest point, or air vent to the height of the expansion tank. In fact you could locate the tank on a small job of this kind at the highest point on the end of one coil.

Pittsburg

Preparing for Reception A. C. S.

The first meeting of the Florists' Club in the new year was held last week in the Fort Pitt hotel and was unusually well attended. The membership list is growing wonderfully; it must be on account of the coming convention of the American Carnation Society, as 13 new members were elected. Several delinquent members, whose dues have not been paid within a few days, and some who left the city, were dropped from the list. Most of the committees with the coming of matters in connection with the coming meeting of the A. C. S. had reports to make and everything is progressing nicely.

The chairman of the Finance Committee requested that the secretary of the Club send a notice to all subscribers to the fund for the entertainment of the visitors to send in their subscriptions at once.

The Entertainment Committee gave an idea of what they were doing, and what they desire to do, to make the stay of the visitors as pleasant as possible.

The president appointed Messrs. Langhans and Frischkorn to audit the books of the Club.

Nomination of officers of the Club for the year were in order, and Mr. Falconer's motion that a committee of two be named by the president to make nominations was carried. Messrs. Falconer and Elliott were appointed, and named all the present officers as they thought best they should be continued for another year, and the committee would not accept any refusal.

It was suggested that the Club hold a special meeting before the Carnation Society's convention, but the chairman decided that a joint meeting of the various committees would be far better, and he would instruct the secretary to send notices to all members of committees when and where it would be held.

A Goodly Exhibition

The subject for the evening was Roses; the display was not large but

good. P. S. Randolph and Ed. Blod were appointed to judge the display.

John Cook of Baltimore, Md., sent a dozen excellent flowers of his new pink Rose "Radiance," for which he was awarded a first-class certificate. The blooms were much admired by the growers as well as store men; everyone thought it was a fine Rose, showing good color and large buds with good stem and foliage.

The Pittsburgh Rose and Carnation Co. showed a nice lot of white and pink Killarney, My Maryland and Bride.

P. S. Randolph showed a well-grown plant, full of bloom, of *Begonia incarnata*, an old variety, easily grown but not seen much in commercial places, which, he said, sold well at the Christmas holidays. It is much more satisfactory than Lorraine as it holds its flowers much better for a house plant.

R. & J. Farquhar & Co. of Boston, Mass., exhibited some fine plants in bloom of Cyclamens in the following sorts: Giant white, pink, crimson, Excelsior and Duke of Fife. Mr. George Cruickshank, representative of the firm, who was present at the meeting, read some notes describing their culture, which were listened to very attentively. He was requested to give the secretary of the Club a copy of his paper for publication in the trade papers; this he promised to do. A vote of thanks was tendered to him for the display and his excellent paper.

The subject for the next meeting of the Club will be Carnations, including a competitive exhibit by the private gardeners of 6 Primula plants, 3 varieties, 3 Cyclamens, 3 colors and 25 cut bloom Carnations, any one variety or mixed.

State of Trade

The past week's florist business was satisfactory; a great deal of funeral work created a good demand for stock. Social functions were also numerous. Prices of stock held up pretty well; the cold spell of weather is of some assistance. Roses are of good quality in fair demand. The supply of Carnations is about equal to the demand; they have not as yet been abundant this year. Paperwhite Narcissus is the best selling bulb stock and brings from 3c. up. There is hardly any demand for Roman Hyacinths; very few are grown. Sweet Peas are coming in better, just a little too high priced to sell readily.

John Bader celebrated his 65th birthday last week at his home on Mt. Troy. Many friends were invited and spent a pleasant evening.

The Pittsburgh Cut Flower Co. is sending out a nice folder, giving the location of hotels, places of amusement, exhibition hall for Carnation Society's meeting, wholesale and retail florists' stores, and other places of interest for the visitors who will be in attendance at the convention of the A. C. S., also inviting delegates to make their place of business, 222 Oliver ave., a most central location, their headquarters.

A Banquet of Unusual Brilliance

Randolph & McClements had the decorations for one of the most elaborate affairs ever given in our city, the annual dinner of the Carnegie Steel Co.'s officials, held in the Fort Pitt Hotel last week. The English room, where the banquet of the Carnation Society's visitors will be held, was used, and it was decorated in a beautiful and most costly manner. In the center of the banquet hall a miniature lake was artistically arranged, in which were fishes of various kinds. Banked on the sides of the lake was a bower of American Beauty Roses. The outline of the general decorative plan formed a Southern garden scene. Distributed throughout the entire room were many rare and beautiful plants. The orchestra was entirely hid behind a bank of flowers and canary birds jumped from bower to bower, mingling their melodious notes with the strains from the orchestra. At the conclusion of the feast each visitor took an armful of American Beauty roses along home. Mr. McClements had full charge of the decorations, including the electrician's work, a big job, but he was equal to it.

E. C. REINEMAN.

The Carnation Convention at Pittsburg

The Florists' Exchange issues of Jan. 22 and 29, also of Feb. 5, will be essentially Carnation Numbers. (See advertisement on editorial page.) Very many of our readers are equally interested with the disseminators in the behavior of all the leading varieties of Carnations on the market, and to these we extend a hearty invitation to send us in for publication a summary of their experience in 1909 and their suggestions for 1910—Write now while the mood is on you.

PETUNIA DOUBLE

10 kinds, 2 in., 2c.
 Sunlax, 2-in., \$1.25 per 100.
 Abutilons, 3 kinds, 2-in., 2½c.
 Lantana, 2-in., 2c.

PRIMULA

Primula Obconica, Giant Mixed, 2-in., 2c.
 Heliotrope, 2-in., \$1.60 per 100. Cuphea, 2-in., 1½c.
 Poinsettia, stock plants, 6c.
 Geraniums, Double Grant, Rose, etc., 2-in., \$2.00 per 100.
 Coleus, 10 kinds; Ageratum, 3 kinds; 2-in., \$1.50 per 100.
 Rooted Cuttings, prepaid per 100. Heliotrope, \$1.00; Fuchsia, 3 kinds, \$1.00; Parle Daisy, yellow, white, \$1.00; Cuphea, 76c. Vinca Variegata, 90c.; Coleus, 10 kinds, 60c.; Alternanthera, 3 kinds, 60c.; Ageratum, 3 kinds, 60c.; Swainsonia, 10c.; Dbl. Petunias, 10 kinds, \$1.00. Feverfew, 60c.; Flowering Begonia, 8 kinds, \$1.25; Salvia, 90c. Cash with order.

BYER BROS., Chambersburg, Pa.

Please mention the Exchange when writing.

Calendars Received

EDWARD TATRO, Florist, Salina, Kan.
 THE BENJAMIN CHASE CO., Manufacturers of Wood Labels and Plant Stakes, Derby Village, N. H.

BENJAMIN HAMMOND, Fishkill-on-Hudson, N. Y.—This is one of the most unique calendars that has come to the desk so far this season, inasmuch as while it is informative to a considerable degree the disseminator has managed to get in quite some effective advertising matter on each monthly sheet, thereby proving himself an adept in that line. The calendar furnishes large sized figures, making it very desirable to hang in the office.

Detroit

With the exception of small weddings and club dances, society was rather quiet last week, and the florists' activity was in accordance with it. Stock is accumulating, but not so as to cause alarm, and there is still sufficient to give the retailer a chance to select. Compared with other years we have a remarkably large supply of very fine red Carnations.

Bulbous stock is making its appearance and a systematic well-controlled supply of this class of flowers ought to bring the growers satisfactory returns. The trouble in the past was that for the sake of a half cent or one cent advance at Easter most growers held their stock back, resulting in a glut and consequent heavy loss at a time when best prices should reign.

FRANK DANZER.

Dahlias Should be Attractively Staged

When we can present to the general public an exhibition such as is generally produced with the aid of Chrysanthemums, we shall feel we have made a long step forward in the progress for the proper exhibition of Dahlias. This placing twelve or twenty-four or a hundred bottles on a table, and showing one flower in each, is, to our minds, the greatest injury to the progress of Dahlias, and we must make an effort to get away from it. Dahlias should be shown, above all, in connection with graceful greens, such as Ferns or Palms. The good varieties should be shown in large vases carefully arranged to display their best qualities. Single specimens should be used only in connection with the general exhibition in a decorative way. Dahlias can easily be raised in pots, and each exhibit should have a liberal display of them shown in their natural beds, to give visitors a fair idea how Dahlias grow and what they look like in the garden.—*Dahlia News.*

Fires

CAMBRIDGE, MASS.—Wm. E. Doyle on Cambridge st., near Leonard ave., recently suffered a damage of several hundred dollars through fire caused by an overheated boiler.

WASHINGTON, D. C.—An overheated oil stove started a blaze in the greenhouse of E. T. Stunkel in the rear of 801 H st., N. E., January 3 about 11 p. m. Slight damage was done.

TAMPA, FLA.—A blaze starting in a private residence made its way to the front of the Tampa Floral Co.'s establishment on December 31, and a great loss in the destruction of glass is reported.

PEORIA, ILL.—Spontaneous combustion caused a fire in the second story of the building occupied by the Stocker Seed Co. Several thousand dollars' worth of seeds were lost; the property loss was nothing heavy.

ROCHESTER, N. Y.—An overheated stove used in heating a small greenhouse run by Wm. Dobberton at 208 Clinton ave. caused a fire on the evening of December 28; damages amounted to about \$50.

POUGHKEEPSIE, N. Y.—Two greenhouses, owned by J. C. Hamlin, were recently partially burned at the ends, but the plants were saved from freezing by covering up the open spaces with blankets.

PEORIA, ILL.—Fire threatened to completely destroy the Weber Seed Co. building at 117 Washington st. at 11 p. m. January 1. The blaze originated in the basement of the structure and before it was extinguished, did damage to the extent of \$10,000, fully covered by insurance. The origin of the fire is a mystery.

NEW BRITAIN, CONN.—The A. A. Weldon greenhouses were the scene of a fire which broke out in the early hours of December 31. The three greenhouses which constitute this property have been rented for the last three years by V. C. Pauloz, and many Palms and potted plants have been stored by Mr. Pauloz for patrons in the city to be cared for during the winter. Snow was used to extinguish the flames, and the damage to the greenhouse buildings was very slight. The engine house, however, which contained the heating apparatus and several tons of coal in the coal shed were totally destroyed.

NEW YORK.—The continued bad weather conditions up to last Saturday seriously interfered with business in the wholesale district, and the accumulation of cut flowers grew until all hopes of clearing up at week end were given up. Since Monday, business has been quite brisk, although buyers have been careful to see that no great quantity of stock was on their hands, and confined themselves to small speculations, which have but little effect on the amount of stock continually coming in.

American Beauty Roses have fallen off in supply, so much that on Wednesday a. m. efforts to secure a dozen good grade flowers would have met with failure. But still there is so little demand for them that the price remains at 50c. for top grade. Other grades fare much worse, and but few are seen. Tea Roses of every variety are very plentiful, except white, for which there has been a satisfactory demand the past few days. Top grades of Killarney and My Maryland sell at \$12, but only for selected stock. Plenty of medium grade flowers are on hand, but find no buyers at offers of \$6 to \$10. Richmond cleans up a trifle better than other varieties. A lot of weak flowers of all kinds have been received, and are hard to move at any price.

Carnations are improving in quality right along, but sales lag, and a clean up is only accomplished by job lot offers of \$2 to \$3 seems to be the prevailing range of prices, although some fancy grades sell at \$4, while a few novelties reach \$5 to \$6. Quantities of poor flowers are left over from day to day, these eventually going for a mere nothing.

Orchids continue in supply as last week, and sales of them are not over brisk. 50c. for top grades is the price limit and a general range of prices is 25c. to 40c. Cypripediums are more plentiful, and at \$10 to \$12.50 are hard to move.

Lilies continue in good demand, but at a \$15 price are hard to move, although where quality of stock is considered, an occasional sale is made at that figure; poorer grades find buyers at \$8 to \$12. Lily of the Valley is short in supply and at \$5 a fair demand for top grades is noticed. Quite a little poor stock is on hand at low figures, but who wants it?

Daffodils are arriving by 5000 lots and on Wednesday noon, large numbers were in the hands of the wholesalers. Prices ranged from \$2 to \$4. Paper White Narcissus is very plentiful and at \$1.50 per 100 a clean up is not effected. Shipments of Tulips are increasing, and where stems are long enough, \$3 is the price. Other grades move slowly at \$1.50 to \$2.

Violets move fairly well, at 60c. per 100 for strictly fresh flowers, while bunches of aged flowers are hard to get rid of, and any fair offer is considered, consequently sales at 25c. per 100 are frequently made. Gardenias drag, and but little call is manifest for them. Sweet Peas go begging, except select stock which moves moderately.

Adiantum, Asparagus, and Stevia are meeting with a good demand.

PHILADELPHIA.—The cut flower market at present writing is feeling the effects of sluggish business in the past few days, so that all lines of cut material are plentiful, with no apparent outlet unless the weather moderates enough to allow the street man a chance to handle a lot of the left over material. From grower, wholesaler and retailer alike come reports of bad business, much of which is due to poor shipping facilities and delayed shipments, with but little chance of a "come back" for some time to come.

American Beauty Roses, as well as all others, are very plentiful and prices average about half as much as a short while ago. Pink Killarney and My Maryland are especially plentiful; while a general shortage exists in white Roses, the condition is only brought about by the excessive demand for fun-

eral material. As far as prices are concerned they range from \$3 to \$12 and many lots are sold at special prices.

Carnations are even more plentiful, although white sorts, as in Roses, have been more in demand, pink and other colors are quite heavy in supply and are sold at various prices ranging from \$1.50 to \$3 according to age and condition.

Orchids, in available varieties, are in moderate demand, recent large funeral orders cleaning out the entire supply, since which time the demand has reached normal, selling price is anywhere from 40c. to 60c. for the various Cattleyas, while Cypripediums are quite plentiful and remain unsold at offerings of 10c. and 12c. Lilies fluctuate from day to day, and good flowers are scarce and maintain an average of 15c., while other grades range from 8c. to 12½c.

Lily of the Valley is quite plentiful, and but little call is noticed, except for casual orders, the demand for it failing to clean up shipments, which, however, fail to arrive with any degree of regularity. Selling price for top grades is \$3 to \$4, medium grades from \$2.50 downward. Gardenias are very plentiful and but little call is noticed for them; flowers are of fine quality, but price is low, ranging from 10c. to 30c. each for the various grades. Violets drag, and many good flowers are left over only to be jobbed off to a fakir at the rate of about \$6 per thousand. Fresh flowers are sold at \$1 per 100 for double and single varieties, those remaining unsold usually going at a lower figure next day. Sweet Peas are becoming more plentiful daily, and offers to retailers of good stock at \$1 per 100 are refused.

White and pink sorts predominate and a trifle heavier call is noted for the latter shades. Narcissus is plentiful everywhere, and if offers were made to clean out at \$1 to \$1.50 per 100, wholesalers would not think twice before taking the chance. These flowers are of good substance and during the holidays sold fairly well, but since they have become a nuisance.

Asparagus and other greenery has moved well in the past week, and better general prices have prevailed. Adiantum advanced to \$1.50 while Asparagus maintains steady figures from 35c. to 50c., according to grades. Galax has been experienced a better call, Ferns have experienced a better call, and orders for them keep the stock moving quite frequently. Bulbous stock, such as Daffodils and Freesias, the first shipment of the latter arriving Monday, seem to be in good demand and Yellow Daisies, Pansies, Mignonette, etc., become more plentiful daily. White Lilac is seen in limited quantities and cleans out well at \$1 per dozen flowers.

CHICAGO.—The week opened with the thermometer almost at the zero mark, as was experienced for ten days past, but Tuesday saw a decided rise, a most agreeable change. There is plenty of stock to be found everywhere, the only shortage being in white Roses, which are not in quantity sufficient to meet the demand. American Beauty is the only Rose variety that drags, all other Roses moving off fairly well, although prices are lower than a week ago. American Beauty continues to be off color, which is detrimental to sales.

Carnations are in sufficient quantity to meet all requirements, and are in fine shape, the color in all varieties being excellent. The variety Admiration is to be had in the most beautiful color, and is becoming very popular as a light pink. Prices on Carnations are unchanged from last week.

Lilies are considerably scarcer, prices, therefore, advancing. L. Harrisii is bringing from \$15 to \$20 per 100. Callas are moving at \$16 per 100 for good stock. Lily of the Valley keeps steady at \$4 to \$5 per 100 for the best. Sweet Peas are disposed of easily, as there is not a great abundance of same, and they are bringing about \$1 per 100.

GROWERS' CUT FLOWER CO.

Cut Flowers at Wholesale

J. J. COAN, Manager

Consignments Solicited

30 West 28th Street,

Telephone 4237

NEW YORK

Please mention the Exchange when writing.

Roman Hyacinths move slower than any white flower on the market, and the prices seem to be always the same. Some few Jonquils are found, and the demand is about equal to supply. Freesias are also on the market, the price \$3 per 100. Tulips, Mignonette, Snapdragon and a few Pansies are to be had, but do not move very quickly. Violets are fine, both in color and size, with prices about as quoted. Orchids are not plentiful; more could be disposed of if obtainable. Gardenias remain about as in the past few weeks at \$3 to \$5 per dozen.

Ferns have advanced in price since last report, being now \$2 per 1000. There is plenty of all sorts of green goods, no matter how great the demand. The market generally is in a pretty fair condition for this season of the year, and all wholesalers are doing as much business as anticipated.

BOSTON.—The market is steady. There is no surplus; in fact, the demand for the past week has been good.

Carnations are bringing good prices, 3c. and 4c. being the regular for the best grades, while some of the fancies bring 5c.

Short-stemmed Roses have been much in demand, selling at 4c. and 6c. Others vary according to variety. Killarney, Richmond and White Killarney are the best sellers. There are some good American Beauty in the market. Limited quantities of other Roses are also to be had.

Violets have been much in demand at \$1 and \$1.25. Lilies bring \$1.50 a doz. Callas \$1 and \$2; they are not plentiful. Freesias bring 4c. and 6c. Daisies are scarce and bring good prices. Mignonette, etc., bring 3c. and 4c. Wallflowers, Stevia, and Myosotis bring 25c. a bunch.

Tulips are not plentiful as yet. Paper White Narcissus bring 2c.; Trumpet Daffodils and Golden Spurs, 4c. and 6c. Sweet Peas bring 50c. to \$1. Lily of the Valley, 4c. for the best grade.

H. U. B.

INDIANAPOLIS.—No unusual features evidenced themselves in the flower world during the past week. The quality of stock has been uniformly good and has made many friends of customers. Carnations are showing up in true exhibition form, long stems, large flowers and bright coloring. The wholesale demand does not leave any on the grower's hands at \$3 to \$5 per 100.

Spring flowers, such as Sweet Peas, Jonquils, Lilacs, Lily of the Valley and single Violets are most readily taken by the courier trade which has been unusually good of late.

The late Rose introductions are still the favorites in the Rose line, although Bride and Bridesmaid are in truly fine condition. The price is much the same: \$6 to \$8 per 100 for select stock, \$4 to \$5 for second grade, and \$2 to \$3 for shorts. American Beauty are again selling at their customary figure—\$5 to \$50 per 100.

The supply of Cattleya labiata is exceedingly bountiful at \$50 per 100, there is little else in the Orchid line with the exception of Cypripediums at \$2 per doz. Smilax is offered from all quarters. It is apparently impossible for the growers to do otherwise as a scarcity and an overplus of this article invariably come at the same time. Prices are often discounted in order to find a local market, but the major portion is shipped away at \$10 to \$12.50 per 100. Adiantum is scarce at \$1 to \$1.50 per 100.

Tomlinson Hall Market has little to offer to the shopmen these days as nearly everything is ordered in advance and does not put in its appearance there.

Retail trade is reported as good. The conservatories are having and will have for some time a splendid supply of flowering plants. Rhododendrons, Lilacs, Jonquils, Ericas, Azaleas, Primroses and Cyclamens are among the most attractive specimens offered patrons. Prices vary but slightly from other years.

I. B.

ST. LOUIS.—Last week the market was in a good condition as there was plenty of everything to be had in all grades; the quality of the stock coming in just now is above the average.

The commission men say the demand was not very good all of last week and during these dull days, prices dropped pretty low on fancy grades. The first part of the week we had quite a big sleet storm which lasted two days, this kept buyers indoors and most of our business was done by telephone.

Roses are coming in heavily and American Beauty long fancy, bring from \$4 to \$5 per doz.; medium and shorts according to length of stem; other Roses, such as Killarney, Richmond, Bride and Bridesmaid, fancies, hardly over \$5 for choice; shorts very cheap.

Carnations, like Roses, are in big supply and not over \$4 for extra fancy. Weber's White Enchantress are very fine just now.

Violets were not any too many but, with clear weather, should be in plenty by the end of the week; 50c. to 60c. was the price last week. There is also a big stock of bulbs coming in at present in Roman Hyacinths, Paper White Narcissus and Lily of the Valley. Callas and Harrisii Lilies are not any too many. The market has calls for Tulips and Von Sion Narcissus but none are in the market yet. All greens are moving well at usual prices.

ST. PATRICK.

Indianapolis

The State Florists' Association of Indiana will, at this month's meeting, elect officers for the ensuing year. A number of good Carnation exhibits are promised for the exhibition to be held in connection therewith.

The Indianapolis Plant & Flower Co. is selling many Carnations at its New York store agency.

Indiana will, no doubt, be well represented with Carnation growers at the Pittsburgh exhibition. Stock in this section is certainly in fine trim and should result in honors for the Hoosier growers. Dorner's Scarlet Glow, Knopf's Admiration, Hill's Niagara, Baur & Smith's Shasta, and Bertermann's J. Whitcomb Riley are among the debutantes looking for favor there.

Albert Kempke is cutting a quantity of select Peas for this market.

E. A. Nelson is planning additional glass for his range this Summer.

Thomas Knipe of Kokomo is shipping single Violets in quantity.

I. B.

London, Ont.

Now that Christmas is over, and we have time to look around we find very little holiday stock left. Well, there was a rush this season and no mistake, plants taking the lead, both wholesale and retail. The demand for made-up baskets of plants this season was splendid, many hundreds being sold at prices ranging from \$1 to \$10. Ferns and Palms received a good call; Azaleas, Narcissus, Cyclamens, and in fact anything with a flower on was cleaned up. Cut flowers were about half equal to the demand, Carnations selling at \$1.50 to \$2.50 per doz.; Roses at \$3 to \$5 doz.; Violets, 50c. doz.; Valley, 75c. doz.; Orchids, \$6 to \$10 doz.; Paper White, Romans and Tulips, 50c. to 75c. doz.

The weather remained fair and cold for Christmas, with enough snow for good sleighing.

New York
 The newly appointed Park Commissioner T. J. Higgins has made sweeping reductions in the park forces in the Bronx, having dismissed Supt. of Parks John H. Morrison, and many gardeners and laborers, most of whom had been on the city's pay roll for years. This is in accordance with the wish of the new mayor to disconnect politics from city jobs.

A large shipment of Gardenias was recently received on 28th st. which, when opened, were found to be badly frozen. James McManus is receiving shipments of some of the finest Adiantum coming to the New York market.

Geo. Cotsonas & Co. are distributing a tasty calendar, which carries a "green goods" advertisement.

Hanft Bros., the 62d st. and Madison ave. florists, have been fortunate in securing much funeral work lately. They recently made two floral casket blankets and many other large pieces.

The death of H. McKay Twombly of Madison, N. J. will be a serious loss to the florists of that vicinity. His well known love of flowers, and horticulture in every line, besides his interest in the annual flower shows, made him very popular, and his efforts along those lines will be long remembered by all who have come in contact with him.

Henshaw & Fenrich are receiving, daily, some of the finest Violets ever seen, and in such quantities as to enable the firm to care for all comers.

B. S. Slinn, Jr. is handling a grade of Mignonette that is hard to beat; top grade Violets are also one of his specialties.

Yellow Prince and La Reine Tulips are coming into the market; and bunches of Lilac are seen more frequently.

During the past week shipments of Violets have arrived so late in the day as to be useless for the day's business, and were consequently held over, much to the chagrin of the wholesaler.

Flowering shrubs in pots, such as Quince, Prunus triloba and Deutzias are being shown in the uptown store windows and branches of Forsythia in bloom are used for window decorations.

Few commission men handle more Roses of all grades than A. Moltz, who deserves much credit for the business he has worked up. His store is in the Coogan Building, W. 26th st., where it is possible to secure Roses of all grades—he handles no other flowers—at any time of the day.

John I. Raynor is receiving some Daffodils of very excellent quality from Newport, and can supply them in any quantity.

The A. T. Bunyard Floral Co. has had a very good business since the establishment of the store on Madison ave., and are satisfied that the location selected is a good one.

Frank H. Traendly, of Traendly & Schenck celebrated his 43d birthday last Wednesday.

A dark pink seedling Carnation exhibited by E. L. Enggren of Aqueduct, L. I. before the New York Florists' Club last Monday night was much admired. The award committee scored it 85 points and awarded it a preliminary certificate. Mr. Enggren will take a vase of the flowers to the Pittsburgh exhibition this month.

A visitor at the Club on Monday evening was J. C. Spencer of Utica, N. Y. Mayor Phil. Breitmeier of Detroit was in the city last week and was introduced by Harry A. Bunyard to Mayor Gaynor.

NORTH CAMBRIDGE, MASS.—John McKenzie is laid up with a troublesome foot which recently required an operation.

BOSTON, MASS.—Morey Bros. of Tremont st. have fitted up their greenhouses with electric lights.

**Solicits Consignments of
Cut Flowers**

This is strictly a co-operative corporation, composed of 19 growers and retailers of the District of Columbia, under the management of Albert Schnell, formerly in charge of the Washington branch of S. S. Pennock-Meehan Co.

Consignors are welcome to inspect our books and see at what figure their stock sold, to satisfy themselves that they have been credited with full amount.

Please mention the Exchange when writing.

his success at Overbrook is a sample of his painstaking and energetic efforts.

J. O. Thilow of Dreer's store, Chestnut st., is shortly to leave for a trip to Richmond, Va., to spend a few days at his old home town; and from there he will journey to Chicago, Ill., to be present, if possible, at a meeting of the National Council of Horticulture, of which he was recently appointed a member.

I. Rosnosky, representing the Henry F. Michell Co., will be at the Pittsburgh Carnation meeting and hopes to see many of his old friends there, besides getting acquainted with new ones.

It is fully expected that Dorothy Gordon, the best Carnation to date—as viewed by the writer—will be amply represented at the coming exhibition, and as Mr. Heacock, who disseminates the variety, believes in establishing a fair price so as to give all a chance to secure stock, good results may be expected from the trip. Blooms of this variety have proved to be the best in Philadelphia, from every viewpoint.

The Logan Nurseries, under the management of Mr. Hobson, have rapidly improved, and since the holidays strenuous efforts have been put forth in an endeavor to secure plenty of plants for Easter, at which time it is hoped that Hybrid Roses, Climbing Roses (Tausend-schon), Azaleas, Lilies, Spiraeas, etc., will be in good shape for an extensive business.

Thaddeus N. Yates & Co. of Mt. Airy are offering to the trade some strong established Calla plants, suitable for planting out or repotting, and these should make good material for florists whose trade calls for them. Paperwhite Narcissus and Easter Lilies are being sent into the wholesale market regularly, and the firm expects to have a large number of Lilies, both cut and in pots for the coming Easter.

W. E. McKissick & Bros. are handling the first arrivals of Freesia blooms, which are of such quality that almost record prices are obtained for them. A steady supply of cut Lilies is generally to be found at their establishment.

The S. S. Pennock-Meehan Co. is now booking orders for rooted Carnation cuttings, the list of varieties containing many of the best "tried and true" sorts, also some of the newer introductions. This house is also offering to retailers Carnation blooms in special lots at a rate that should result in a big demand.

Chas. W. Cox of Girard College, who succeeded Edwin Lonsdale, received a letter from that gentleman recently which says that the weather at Lompoc is just frosty enough to ripen the Rose bushes, which have made a splendid growth the past season, and that pruning them is now the order of the day. After remarking that the health of Mrs. Lonsdale has much improved, Mr. Lonsdale concludes by wishing all his Philadelphia friends a "bright and prosperous New Year."

Jas. M. Thoires, Camden's most prominent retail florist, has had an unusually busy time recently, with funeral and other work.

Even the casual observer is stopped by the pleasing window display in the store of Pennock Bros. The latest feature was an array of baskets containing American Beauty Roses and white Lilac, a combination set off in a very harmonious manner by colored plush carpeting tastefully caught up in irregular effect, the entire scheme forming an advertisement from

which the firm receives immense benefit. An object lesson to other retailers is to be found in these window displays.

American Beauty and other Roses are a feature of the week with the Leo Nielsen Co. The offerings in Carnations, Valley, Narcissus and other cut material enables the house to care for shipping orders at any time of the day.

Wm. Swayne of Kennett Sq., Pa., is shipping to Wm. J. Baker some fine flowers of the O. P. Bassett Carnation, and while the supply is not overabundant it is enough to show that with good culture first-class flowers of this variety can be secured.

Preparations and alterations are going on apace at the new branch store of the Century Flower Shop soon to be opened at 52d st., near Market st., the location of which should prove advantageous to the public as well as to the head of the enterprise.

John McIntyre says he cannot secure enough white Lilac to fill his orders.

St. Louis

Prof. William Trelease, director of the Missouri Botanical Gardens, was elected president of the Academy of Science at its meeting held last week at 3817 Olive st.

A meeting of all the local ladies of the Ladies' Society of the S. A. F. Miss M. Meinhardt, president, was held on Monday, Jan. 10, at the Washington Hotel.

W. H. Kruse, florist at 2845 Arsenal st., had a narrow escape from being burned out last week; the fire was confined to the rear of the place; the stable and all its contents except the horses was burned. Mr. Kruse reports his loss at \$800, only partly covered by insurance.

Florists Walburt and Mrs. Ayers at Grand and Olive sts., have their show houses looking fine again and are making a grand display of cut stock; their Christmas and New Year's business nearly cleaned them out.

Mrs. Ellison of the Ellison Floral Co. reports that they have a number of fashionable decorations booked for weddings and balls, to be held the latter part of the month.

Ed. Kalish of Kalish Bros., at Taylor and Delmar aves., says that their New Year's business was double that of last; they have a well stocked show house with fine plants.

The Kahrs Floral Co., which recently opened at 6th and Locust sts., has closed its doors. All the fixtures have been stored as Mr. Kahrs contemplates opening a store in the West End in the near future.

Our commission men have been receiving some extra fine consignments since the holidays with hardly any scarcity except in Violets; these, should the bright weather keep up, ought to be very plentiful by the end of this week. They are just now receiving an extra fine supply of Roses in all varieties.

At the opening of the big show house of Roberts, Johnson & Rand, florists had a busy day, as more than fifty large floral designs were sent by friends of the firm. Chas. Beyer had the main decorations.

The Engelman Botanical Club held its first meeting this year on Monday, Jan. 10, in the Botanical Laboratory of the Central High School. Dr. R. R. Gates lectured with lantern slides on "The Structures of the Plant Cell." The

new officers, H. P. Chandler, president, and Charles Fulgraf, secretary and treasurer were installed into office. The meeting was largely attended.

ST. PATRICK.

Lockport, N. Y.

There is very little here to write of interest to florists. The weather is the same as in most other places, cold and snow, and then more snow, and no sun. Carnations are looking good; a little soft, on account of damp weather. The Christmas business was much better than last year, with more plants being sold each year. Everything sold well, Begonias especially.

Chicago

Evauston has come into possession of a strip of land which was needed to connect two other pieces which are owned by the city, and it is planned to make a continuous park on the lake front, from the southern end of the University campus to Greenwood boulevard. The land was a gift from the Northwestern, is located at the foot of Lake st., and has about 150 ft. frontage on Sheridan rd. and the lake; it is valued at about \$20,000. It is north of the piece of land that was presented to the city for park purposes, a short time ago, by James A. Patten.

The decorations for the final débütante of the season, Miss Helen Gurley, was the most elaborate executed this season. The débütante carried Orchids. The dining room glowed with yellow and white Narcissus, with white Hyacinths and Ferns for table decorations. The north drawing room was embowered with flowers. Baskets filled with American Beauty Roses bordered the walls, and vases of these same flowers screened the windows at the further end of the room. Killarney Rose buds in tiers reached to the ceiling, and in the vases around the rooms were Violets, Orchids and Carnations.

Please mention the Exchange when writing.

Several hostesses are using the slender, graceful silver and crystal vases for table decorations. These stand quite high, but with a drooping arrangement of flowers do not obscure the vision, and they are a relief from the flat decorations so much in vogue at the present time. Orchids, Lily of the Valley or Roses seem best adapted to them, and Lily of the Valley especially is much used at present.

At a banquet at the Commercial Club plans were perfected for lectures, with stereopticon views, to be delivered all through the different sections of the city, to further instruct and impress the public, with the necessity of all working together to beautify the city in every respect.

With the new year comes several changes in business around the flower market, and we miss many familiar faces from the places we have been accustomed to see them. In the Flower Growers' Market we find in George Walther's place Mrs. Percy Jones, who will manage the business with the help of Harry Von Gelder. We find the Benthley & Coatsworth Co.'s quarters vacated, and Mr. Benthley installed with Kyle & Foerster in charge of the stock. The J. B. Deamud Co. have added to its business staff T. C. Yarnell, formerly of The American Florist, and Nick Miller of Park Ridge, Ill. From Peter Reinberg's we miss Leonard Kill, who is visiting in California.

H. E. Philpott, returned to his home in Winnipeg, Man. on Saturday last. He expects to leave Jan. 20 for a trip to the Pacific Coast, to be gone about three weeks. He will be accompanied by Mrs. Philpott. Mr. Philpott says that although the thermometer in Winnipeg has registered 35° below zero every box shipped to him from Chicago and Toronto has arrived without a flower being frozen in any one instance.

C. Fraenfelder, who has been seriously ill with pneumonia the past few days is reported as improving steadily.

A. I. Simmons of 63d st., has moved, temporarily, across the street, while his own store is going through the process of reconstruction. Mr. Simmons says that when complete he expects to have one of the finest equipped stores in the city.

J. B. Deamud Co. has some fine stock in cut Cyclamens, which he states are meeting with a ready demand. Some fine

Freeias are also to be seen at the store. Mrs. Josephine Garland died Friday night, Jan. 7, at the residence of her daughter, Mrs. Fred Witthold, 715 Buckingham place. Mrs. Garland was the mother of the Garland brothers, Des Plaines, Ill., and Mrs. Percy Jones. The funeral was held Monday afternoon from the old homestead at Des Plaines.

Chas. Knopf of Richmond, Ind., spent several days in Chicago last week, in the interest of his new Carnation Admiralty that has received so much attention from all growers.

We notice the 1910 catalogs of Arthur T. Boddington of New York on the desks of some of the seedsmen.

The Leonard Seed Co. expects to have its new catalogs ready for distribution about Jan. 15. The W. W. Barnard Co. expects to have its catalog ready at about the same time.

Winter's Seed Store is busy completing its 1910 catalog, and expect to have it out by February 1.

Visitors: J. A. Peterson, Cincinnati, O.; J. S. Wilson, Des Moines, Ia.; Geo. Shepard, representing A. M. Shepard & Son, Minneapolis, Minn.

Martha Fraenfelder, wife of Conrad Fraenfelder, a florist of the West Side, died Jan. 1, at her residence, 3343 W. Madison st. The remains were placed in the vault in Waldheim Cemetery. She leaves, besides her husband, two daughters, Edna and Hazel. Mrs. Fraenfelder had been in ill health for a long time, and her death was not unexpected.

Sidney Wiffen of Des Plaines, says that his crop of Sweet Peas is coming in as well as can be expected, considering the amount of dark weather that has been experienced.

The Butler Flower Shop, previously located at 293 Dearborn st., has moved to a location directly opposite, 294 Dearborn st. Rudolph Jahn, former manager of the store has connected himself in business with Mr. Butler. The business style now being the Butler Floral Co.

A. Montgomery Ward & Co. have purchased a tract of land adjacent to the north side of their mail order building, which will be laid out in a park and playgrounds as recreation grounds for its employees.

The scarcity of coal has become a serious problem among the large growers, but considering the dilemma many of the

larger concerns are coming to the assistance of the smaller growers.

Peter Reinberg says his increase of sales over those of 1908 was 10 per cent.

Chicago Florists' Club

The Chicago Florists' Club held its regular meeting on Thursday, January 6, at the Union Restaurant. There were about 60 members present. After the regular business, the election of officers took place, the following being elected: Geo. Asmus, president; H. E. Philpott, vice-president; E. F. Winterson, treasurer; L. H. Winterson, secretary; H. N. Bruus, J. P. Degnan and Alex. Heenderon, trustees. The subject of artificial flowers, which has become a vital question to the florists, was discussed, but no action was taken regarding same. At the next regular meeting, February 3, the installation of officers will take place. After the meeting many of the members went over to Flenner's bowling alleys to watch the florist team bowl in the city tournament. The Chicago American said it was too early in the morning for the florists to bowl. The score was 2342, not high enough to give them any standing with the teams on the list. In the doubles, bowled by A. Zech and Ed. Winterson, they fared better, making a score of 1130, high enough to place them on the list for a prize. In the singles they fell down. Still they feel elated that in any instance they were fortunate enough to get on the winning list.

Florists' Bowling League

The Florists' Bowling League bowled last Wednesday, January 5, owing to the Club meeting and the other bowling matches occurring on Thursday night. Following are the results:

Violets vs. Orchids: Violets 2284 total; Orchids 2184 total.

Carnations vs. Roses: Carnations 2279 total; Roses 2173 total.

The teams will bowl as usual this week on Thursday night.

Boston

The speaker in the first of the Winter course of lectures of the Mass. Horticultural Society on Saturday last was E. H. Wilson of the Arnold Arboretum, who gave an illustrated talk on the flora of China, describing many of the new plants which had been collected by him on his recent travels in that country.

At Horticultural Hall, on Saturday, there was on exhibition a fine lot of well-grown Primulas from Martin Sullivan of Brookline, and also some fine Cinerarias from William Rust of Brookline. Each of the exhibits were awarded gratuities.

There will be a meeting of the Committee of Arrangements of the S. A. F. National Flower Show on Saturday, Jan. 15, for the purpose of taking action on the preliminary schedule and other matters of importance.

Henry M. Robinson & Co. report an exceptional brisk business for the past month and are handling large quantities of hardy Ferns and Boxwood of excellent quality.

C. A. Sanborn of Woburn had considerable damage done to his plant on Wednesday of last week when his headhouse, potting rooms, etc., were destroyed by fire; he succeeded in protecting the adjoining houses which were filled with Violets. The loss will be about \$1000, partially insured.

Ed. J. Rogeau is now handling Roses for A. N. Pierson of Cromwell in the Park St. Market; his white Killarneys are as fine as any seen in this city for a long time.

Don't forget the Club meeting, Tuesday evening.

H. U. B.

POUGHKEEPSIE, N. Y.—Flowers, worth \$50, were destroyed by the overturning of the delivery wagon of Murphy & Schaumburg recently.

BUFFALO, N. Y.—Edgar J. Spiess has opened a new florist store at 211 Genesee st.

CENTRALIA, ILL.—The J. W. Ross Co. has been incorporated with a capital of \$40,000 to conduct a florist, seed and nursery business. Incorporators: J. W. Ross, J. E. Karnes, and J. J. Bundy.

A Word on the Cost of Greenhouses

How much time do you lose, how much needless material is consequently cut up because of the inaccurate measurements of your men in erecting your wooden houses?

Did you ever stop to figure out, right down to dollars and cents, just how cheap the H. & Co. Flat Iron Rafter House is? Take the erecting costs for instance: All parts are cut and fitted at the factory, and made ready to go together with practically no additional labor of fitting and fussing on the job. The frame work can be pushed along at good speed. The rafters with the purlins spacing them 8 feet 4 inches apart form a complete framing unit that in no way depends on any cypress member for its support—these framing units in turn support all the cypress members used.

Some of the cypress members of your house may require replacing after many years, but that Iron Frame will stand rigid and unaffected for generations. It then gets right down to the question of—not whether you can afford to build our Iron Frame House, but CAN YOU AFFORD NOT TO? Write us.

Los Angeles

Sidney Hockridge, proprietor of City Nurseries of Redlands, has two of his new houses, each 20 by 100 ft., planted to Tomatoes, and what a beautiful sight they are, furnished with large luxuriant foliage from the ground to the top of the plants, no sign of insect pest or fungus disease, and the crop of fruit promising to be large. The plants are grown to a single stem, trained to strings, and at the price early Tomatoes are sold in our local markets the returns from these two houses should be satisfactory to the owner on the investment. What is better yet, the pleasure of seeing those luxuriant plants at a season of the year when all their class are killed to the ground by frost, is great, even though the finest looking Orange groves to be found in southern California at present are in that locality. The houses are built 20 ft. apart, with large ventilators on both sides of each, as well as on both sides of the ridge. The atmosphere was pure and sweet, free from that "taint" known as "greenhouse" which characterizes many such establishments and is the cause of an untold amount of trouble and loss from fungus diseases. They are heated by hot water under pressure; and—you Eastern greenhouse men, will you believe the statement—with coal at \$15 a ton in car-load lots, the cost of delivery into the boiler house not included. It is a fact. This part of his expense bill is too high. Greenhouse men about Los Angeles use distillate and oil burners at less than half the cost for the same work. This is the only successful attempt at raising Tomatoes under glass we have seen in California. Delightful as our climate is, and congenial to the growth and perfect development of a greater variety of plants than any other section of the United States, it is a fact that, because of cool nights near the Coast, and the extremely dry atmosphere of the interior sections, we cannot produce ripe Tomatoes here earlier in the season in the open ground than do gardeners in the Eastern States. D. F. Reichard, of the Morris & Snow Seed Co., was seriously burned Christmas eve, by his clothes taking fire at a Christmas tree, while he was impersonating Santa Claus. P. D. B.

A. T. De La Mare Ptg. and Pub. Co., Ltd.,

2 to 8 Duane Street, NEW YORK

ITS TWO PHASES

We take it for granted that if you build a greenhouse you want it ornamental, for the days of utilitarian ugliness are past—but this ornamental side must not be sacrificed to the highest possible growing conditions.

The U-Bar with its curved eaves, wide glass and evident lightness makes a combination meeting both the lines of beauty and those of returns.

The catalog lines up the comparative merits of various constructions, and goes into the matter with numerous illustrations—an interesting and very instructive piece of catalog making. Let us send it.

New Bedford, Mass.

Business has been fairly good the past week. The cut flower trade has had a good demand with the supply about equal to it. Carnations are retailing at 60c. per doz. Roses from \$1.50 to \$2 per doz. Violets of fair quality at \$1.50 per 100. Sweet Peas, \$1 per 100; all retail.

Funeral work has been very good the past week, using up lots of short and split stock. Paperwhite Narcissus retails at 50c. per doz.; there is a good supply of these coming in from local growers.

Plant trade is fairly good; some nice Azaleas, Begonias, Primroses, etc., are still to be seen, in the stores.

R. E. Nofftz, the William st. florist, had a unique design for the funeral of a local man the past week; this was an elevator or, as some call them, a lift. Immense quantities of Carnations, Roses and greens were used up in its making.

R. H. Woodhouse's place is looking fine with its Carnations, Roses, Violets and the large quantities of bedding stock he grows.

A. B. Hathaway is growing lots of bulbous stock this year; he also has some nice Sweet Peas.

The weather here since Christmas has been steady cold with fairly good sunshine days, which helps out lots.

HORTICO.

Bridgeton, N. J.

My Christmas business was a little better than the year previous and the things that went first were the largest, such as Azaleas, pans of Poinsettias and made-up pans of Poinsettias and Ferns. I also do quite a business in canaries and goldfish, and sold in the Christmas season about 35 canaries and upwards of 1000 goldfish.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXIX. NO. 4

NEW YORK AND CHICAGO, JANUARY 22, 1910

One Dollar Per Year

SELECT FERNS

For Fine Store Trade

We offer a grand lot of exceptionally well-grown plants of the different varieties of

NEPHROLEPIS

which will be found one of the best-selling and most profitable plants that florists can handle. Our stock is in unusually fine shape, and we will guarantee it will please the most exacting, as it is exceptionally good value at the prices quoted.

Improved Elegantissima. The finest of all this type. It was introduced by us in 1905. This form of *Elegantissima* has been greatly improved, and shows no tendency to revert to the Boston, making it the most valuable fern of this type.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8-in., \$12.00 to \$18.00 per dozen—according to size.

Superbissima. Introduced by us in 1908. A very unique and distinct novelty. Its distinguishing characteristics are its dark green foliage and dense growth. Fronds are very heavily imbricated, making them very dense and compact.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8-in., \$12.00 to \$18.00 per dozen—according to size.

Bostoniensis, Piersoni, Whitmani, Scottii—Extra fine plants, 6-in. pots, \$6.00 per dozen; 8-in. pane, \$12.00 per dozen.

S. & W. CO.'S Fertilized Flower Pots

For Growing and Shipping Plants

Made of Extra Heavy Manila Waterproof Card Board, Fertilized, Wire Stitched Seams, Perfect Drainage and Shipped Flat. If you grow Tomatoes or Pot Plants you cannot afford to pass over this.

These square pots economize space, give more room to the roots than the tapering round pots. In setting out plants the pots are not removed. Simply unlock the bottom flaps and turn them up (see cut), allowing the roots to grow down.

Size	Gross Weight	Per 1000
2 1/2 inch ... about 30 lbs.	250	\$3.00
3 inch ... about 40 lbs.	160	4.50
3 1/2 inch ... about 50 lbs.	175	5.50

In setting out plants unlock the bottom, pull up one inch and you have a wall to protect the roots against Grubs and Worms.

WARD'S LILY BULBS

"NOT HOW CHEAP— BUT HOW GOOD!"
RALPH M. WARD & CO.
12 West Broadway—New York

SEED TRADE REPORT
AMERICAN SEED TRADE ASSOCIATION
President J. C. Robinson, Waterloo, Neb.; first vice-pres., M. H. Duryea, New York; second vice-pres., F. W. Bolgiano, Washington, D. C.; sec.-treas., C. E. Kendel, Cleveland, O.; asst.-sec., Leonard H. Vaughan, Chicago.

We look for the year 1910 to be the greatest in the annals of the American Seed Trade. Those who make the greatest efforts (which includes advertising in all its forms, both wholesale and retail) are likely to be most benefited.

IMPORTS, ETC.—Jan. 10.—Wells Fargo & Co., 1 box bulbs; Pitt & Scott, 1 package seed. Jan. 12.—J. M. Thorburn & Co., 33 bags grass and Clover seed; Vaughan's Seed Store, 8 bags grass seed; Wm. Elliott & Sons, 12 bags grass seed; W. T. Barnard & Co., 5 cases agric. seeds; Wakem & McLaughlin, 700 bags Sugar Beet seed; Bernard Judca & Co., 250 bags Sugar Beet seed; J. S. Bartie, 15 bags grass seed; H. F. Darrow, 3 bags garden seed; American Express Co., 78 barrels garden seeds. Jan. 13.—O. G. Hempstead & Son, 14 barrels seed. Jan. 15, 16.—F. B. Vandegrift & Co., 7 cases plants; Lunham & Moore, 4 cases plants; Aug. Rolker & Son, 10 cases plants; Aug. Rolker & Sons, 32 cases plants; Merchants Dispatch Co., 3 cases plants; J. M. Thorburn & Co., 11 cases seeds; G. W. Sheldon & Co., 32 sacks seeds; Stump & Walter Co., 12 cases seeds; Vaughan's Seed Store, 8 packages seeds; H. F. Darrow, 350 cases Lily of the Valley; O. G. Hempstead & Co., 15 packages seeds; H. M. Baker, 200 bags Alfalfa seed. Jan. 17.—Wells Fargo & Co., 6 boxes roots, 8 boxes bulbs; A. T. Eddington, 2 cases seeds; J. M. Thorburn & Co., 38 packages seeds; Tice & Lynch, 7 packages seed; Kennedy & Moon, 10 packages seeds; I. C. Pollack, 9 packages seed; Maltus & Ware, 2 cases plants; H. F. Darrow, 9 packages plants; F. B. Vandegrift & Co., 1 case trees; G. W. Sheldon & Co., 1 case plants; Maltus & Ware, 9 packages plants; F. B. Vandegrift & Co., 45 bags seed; Maltus & Ware, 8 cases bulbs, 12 cases plants; F. R. Pierson Co., 1 barrel garden seed; J. M. Thorburn & Co., 10 packages seeds.

European Notes
With the exception of a few minutes about midday on Jan. 2 we have not seen a glimpse of the sun since the new year commenced; for the greater part of the time we have been enveloped in damp, dirty, misty gloom which completely shuts the life out of both animals—the human species particularly—and plants.
What his means to those of us who are making frantic efforts to "cure" our crops of Parsley, Mangold and Radish it is impossible for anyone to imagine, who is not actually in the thick of it.

Boddington's Quality Flower Seeds for Florists

SELECTED SEEDS, SUCCESSFULLY SOWN, SECURE SURE, SAFE AND SERVICEABLE SATISFACTION.

J. BOLGIANO & SON

WHOLESALE SEED MERCHANTS AND
POULTRY FOOD MANUFACTURERS

BALTIMORE, MD.

Fortunately, just as we are losing heart, comes the news of a blizzard en route from your side and a biting easterly wind on the way from Siberia, and as we are enjoying (?) the temperate of the sweating chamber of a Turkish bath there is every probability of our experiencing a change which surely cannot be worse than it is now.

Our difficulties in getting our crops are aggravated by our precautions. It is customary for such crops as are improved by stacking to be carted to the vicinity of the barns and farm yards when harvested, and as these are usually reached by good hard roads there is not any difficulty in bringing the heavy threshing machines alongside when the weather permits of threshing being done. But during the past harvest the dry bours were so few that to economize time stacks of a somewhat temporary character were made in the open fields where the crops grew, and there they remain to this day, ill protected and unapproachable, for even when we have a few moderately dry hours it is not possible to move the ponderous engines and threshers through sodden plowed fields, and threshing on cloths in the open fields is simply impracticable.

This somewhat lengthy explanation will enable our friends to understand why we are unable to make complete deliveries at the usual time, and why we are anticipating with so much pleasure the approach of frost, which will, we trust, put the threshers and their machines at work once more.

What we can only suppose are our missing Beets are now being offered in limited quantities from very outside and dubious sources and under a strange jumble of names. They had better be left severely alone; it is not wise to assume honesty in a rogue even when he apes the style and bearing of an honest man.

Very few business changes of any importance have marked the New Year. In London, the firm of Watkins & Simpson has been turned into a limited company, but this has been expected for some time.

Seed catalogs, both wholesale and retail—the latter first in the field—are now in evidence, and thus far they do not appear to reflect the depression which is said to prevail throughout Europe at the present time.

The ratio of advance in prices which is due to the adverse season is more apparent in the wholesale than in the retail lists. The reason is not far to seek, for on account of the elaborate nature of their contents the retail lists have to be put in hand not later than October, while the wholesale lists were in most cases not touched until December and the prices were consequently based upon later and more reliable information in regard to crops. But in spite of all precautions many articles have been sold out since the catalogs were printed, and some procrastinating buyers are intimating that they propose to resort to legal measures to enforce deliveries on orders that have only recently been sent along. "Ye cannot tak the breeks frae a hielandman."

EUROPEAN SEEDS.

American Notes

Trade Still Quiet

The blizzard snowstorm of the latter part of last week has very generally blocked all traffic so effectively that little immediate store business is being done by the seedsmen. As has been noted before in this column, many seed catalogs will be considerably later than customary to their distribution this season; but owing to the continued wintry weather since Christmas, this condition of affairs will affect the total of 1910 seed sales very little, if any at all. The all absorbing question with the entire seed trade at the present time, is not how shall we dispose of what stocks we have on hand, but how shall we be able to obtain seeds enough to adequately supply the needs of our regular customers. Not in years have so many items been on the short list both here and in Europe. This fact would be bad enough to contend with of itself, but when, in addition, it is fully realized how generally small, comparatively, are the quan-

We are headquarters for Sweet Peas of every description. Our Wholesale Catalogue of Quality Seeds and Bulbs (ready January 1st), contains 52 pages of Seeds and Bulbs you need. Write for it today—a postcard will fetch it.

Forcing Gladiolus

Many florists plant these in boxes, or among their carnations, in the winter. They are excellent for decorative purposes and realize good prices, either wholesale or retail. Gladiolus are a good catch crop and take up but little room. The following are the best for this purpose.

Gladiolus Gandavensis Hybrids

America. The flowers, which are of immense size, are of the most beautiful flesh-pink color. \$3.25 per 100; \$30.00 per 1000.

Shakespeare. White and rose. \$4.75 per 100; \$45.00 per 1000.

May. Pure white, flaked rosy crimson; the best forcer. Selected bulbs, \$1.75 per 100; \$15.00 per 1000.

Brenchleyensis (true). Flery scarlet. Selected bulbs, \$1.50 per 100; \$13.00 per 1000. First size bulbs, \$1.25 per 100; \$10.00 per 1000.

Boddington's White and Light. Extra selected bulbs. 1 1/2 in. and up. \$1.50 per 100; \$14.00 per 1000.

American Hybrids. A mixture of the choicest varieties of Gladiolus in cultivation. \$1.00 per 100; \$9.00 per 1000.

Remember, you may deduct 5 per cent. if cash accompanies order.

The management of the Aphine Manufacturing Company anticipate a large attendance at the public test of their new insecticide, Aphine, which will be held at the Boston Flower Market, Boston, Mass., on Saturday, January 22. No pains, labor, or expense is being spared to convince users of insecticides of the real value of Aphine.

Wm. Elliott & Sons have just finished mailing their retail catalog for 1910. This is the 65th Spring edition of this retail list, and the new one is certainly a work of art. Spring trade is starting to pick up and preparations are being made for a good reason.

Philadelphia Seed Trade

Activity in the mail order departments is becoming more noticeable as the days go by, especially as regards orders from the northern growers, who are beginning to wake up to the fact that competition from the South must be met. Consequently, orders from market gardeners in the North are much earlier this year, and vegetable seeds for forcing are in good demand. Local business has been far from the standard, as measured by the amount of business done in former years at this date, and this fact is laid to the weather, this locality having experienced serious drawbacks by having to combat with zero weather and heavy snowstorms, which will not soon be forgotten. The poultry show, given in this city during the past week has been fully taken advantage of by nearly all the local seed houses, and exhibits of poultry foods and supplies of all kinds were prominent.

The Johnson Seed Co. is preparing for a heavy Spring rush, and it has a few lots of surplus bulbs, which are being offered to the trade at most reasonable prices to effect a clearance. The sympathy of the trade will be freely extended to Wm. J. Sherry of this house in the recent accident sustained by his mother, who fell on the icy sidewalk last week, breaking her hip, and who, on account of her advanced age, feels chagrined to know that she must lie in bed, the more so, as the aged lady is ordinarily very active.

Colds and gripe have recently played havoc with the working force of the Moore Seed Co., several of the staff being kept home recently for a few days to recuperate. This firm is handling a pruning saw which should prove a handy tool to gardeners and florists; it is made of vanadium steel, a substance which is

very durable, allowing the user to even saw through large nails with impunity.

The Stokes Seed Store is replete with a full line of all that pertains to poultry, a line of goods which all seedsmen have found profitable to handle. Tomato, Lettuce and Radish seeds for forcing purposes are also handled extensively, the firm's well known quality of seeds in this line proving a great incentive to buyers.

Henry A. Dreer, Inc., of Chestnut st. is making a fine display in the store window of many appliances for spraying purposes, and is pushing a preparation known as Scalecide, a useful remedy for San Jose scale, and found to be very effective. The house has on sale a very neat calendar, which contains a daily guide in all matters pertaining to gardens, and is a very handy acquisition for all who have need of such things.

The Henry F. Michell Co. is offering special Asparagus plumosus nanus seed, as well as Begonia and Gloxinia bulbs, these bulbs of recent importation and fine in grade. This company has recently completed on its new trial grounds at Torresdale, Pa., a well equipped greenhouse, of Lord & Burnham type, for use as a seed-testing house. The grounds, which in Spring will be planted with many of the company's specialties, are situated on the side of the Peon. R. R. tracks, on which thousands of people ride daily, and as a means of advertisement the location should prove of vast importance. At the store, 1018 Market st., a large display of pruning necessities, and spraying apparatus is to be seen; these store window shows do much toward educating the public along these lines.

Boston Seed Trade

There has been a consolidation effected between the Haskell Implement and Seed Co. and the Ames Plow Co. The new corporation will be known as the Ames Implement and Seed Co. and will continue the business over the Quincy Market, closing up the store of the Haskell Co. on South Market st. The manager of the new concern will be W. H. Peckham, who has been with the Haskell Co. for several years.

W. W. Rawson & Co. has issued a very interesting plant talk pamphlet on the general cultivation of Sweet Peas.

H. W. Rawson has been confined to his home with sickness for several days.

Archibald Smith, formerly manager of the seed department of Jos. Breck & Sons, and who has been in England for

DREER'S RELIABLE FLOWER SEEDS

We offer below a short list of Flower Seeds which should be sown early. New crops of same are now ready; for complete list of Flower Seeds, all of the very finest quality, see our current Wholesale Catalogue. If you have not received a copy, we will send one on application.

HENRY A. DREER, 714 Chestnut Street, PHILADELPHIA, PA.

Please mention the Exchange when writing.

Delphinium Belladonna
Everblooming Hardy Larkspur

several years past, is returning to this country and will be with the Leonard Seed Co., Chicago.

Maurice Fuld has resigned from the secretaryship of the Dahlia Society, and is now devoting his time to the formation of a Gladiolus society.

The H. E. Fiske Seed Co. are handling a lot of Primulas, grown from their own strain of seed, which are excellent. They also have an extra strain of stock which has been very popular with market growers. Their poultry supply business has greatly increased lately.

Joseph Breck & Sons are busy packaging seeds and look forward to a very busy season.

J. K. L. M. Farquhar spent Sunday with friends in Connecticut.

W. J. Fosgate, seed grower of Santa Clara, Cal., was a visitor this week.

Thos. J. Grey has returned from a very successful business trip in the eastern part of the State. J. W. D.

Baltimore Seed Trade Notes

The local seed houses have all issued their Spring catalogs and business is on the move.

Griffith & Turner Co. have mailed over 50,000 of their catalogs to their customers; it is one of the most complete catalogs issued for the trade.

Seed Trade in General

MADISON, GA.—The Madison Fertilizer Co. has completed its new factory plant near the Georgia depot in this city. It is a large, two-story brick building, equipped with the latest and most improved machinery for making fertilizers.

PLANO, ILL.—The Guaranteed Seed Corn Producers, has been incorporated to raise and deal in seed corn and other grains and to publish books and pamphlets relating thereto. Capital \$15,000. Incorporators: J. R. Steward, G. S. Steward, M. J. Isaacs.

CENTREVILLE, MD.—At the 23d annual exhibition of the Peninsular Hort. Society of Maryland, held here recently, Professor Vincent made a motion to have a bill placed before the present legislature to allow nothing but pure seeds to be sold, and a committee for the purpose of drafting such a bill was named.

ORANGE, CONN.—S. D. Woodruff & Sons are large wholesale and retail dealers in vegetable and flower seeds here, besides handling some nursery stock. In common with others they find a somewhat restricted seed supply this year, but otherwise they report trade equal to previous seasons. P. M. R.

MILFORD, CONN.—Albertus N. Clark, seedsman, is located about three miles from Milford, on the Derby road, and does a wholesale business in Sweet Corn and vegetable seeds. Mr. Clark has been in the seed trade for 43 years. He reports that the trade outlook as more promising than for several years previous. P. M. R.

SPRINGFIELD, O.—All the mail order houses here are busy mailing their catalogs, about a million of the books being now ready for distribution; the "Blue Rose" is the prominent feature on several of the lithographed covers. The general feeling is that an increased trade will be enjoyed the coming season, and large preparation is being made for it. M.

MCMINNVILLE, ORE.—According to a Portland paper, G. S. Crego, formerly of Chicago, who took up residence in this State, in order to promote the production of seed of Crego Asters, has met with much success, a crop, grown upon one acre of ground, under contract for him in this township, upon being threshed a week or two since yielding a gross value of \$2000.

MILFORD, CONN.—The Everett B. Clark Seed Co. was started in 1857 by Everett B. Clark, who still remains the present head of the concern. He reports business never so pushing as at present time and equal to previous years if not better. The outlook for 1910 is promising, but some difficulty is being experienced in securing sufficient acreage for growing the seed crop. This concern has just finished building a large seed house at their trial grounds in Green Bay, Wis. They have other trial grounds at East Jordan, Mich., and at Sister Bay, Wis. At each trial grounds their practice is to grow one row of every variety of the seeds they sell, and a number which they are trying out with a view to banding later. P. M. R.

A Cause of Postal Deficit

And Postage on Seedsmen's Catalogues
—Is OneCent for Each 2 Oz. or
Fractions Thereof

INDIANAPOLIS, Jan. 10.—Although this county, Marion, is the only one in the Seventh Congress district, sixty-one big mail sacks full of seeds were received from Washington today at the local post office.

They were sent by Congressman Charles A. Korbly, and constituted his allotment of seeds for 1910.

The mail sacks were addressed to Mr. Korbly's secretary, who will address the thousands of packages to Marion county people. Then they will again enter the Indianapolis post office for delivery to the persons to whom they are addressed.

"When people complain about the cost of handling the mails," said Assistant Postmaster Shideler, "they should remember that the shipment of seeds by mail in this manner costs a lot of money."

"In any other business such a shipment as this would be made by freight, but a Congressman always uses his post office frank and they come by fast

trains, which are paid big prices by the Government for running fast and transporting the mails in a hurry."—N. Y. Sun, Jan. 11, 1910.

Referring to Congressman Korbly's shipment, the New York Globe of Jan. 12, says, very pointedly:

The free transportation of free seeds may be thought to be one of the natural rights and original prerogatives of the free born American citizen. Nevertheless, when seeds are sent by the railroad through the mails—the same seeds to be transported a second time by the same kind government—we say, we have the boldness to say, that the spectacle should make an impression.

There used to be much chaffing at the congressional habit of sending laundry, household furniture, utensils, and the like under this franking privilege. But what is this compared with the transportation—with an encore—of a carload of seeds, all sent by one congressman to the citizens of one county. Consider the possibility of the same situation—all the rest of the congressmen and all the rest of the congressional districts. We wonder that enough seed is grown to supply the mails.

BABY RAMBLER ROSES

BABY DOROTHY. The best yet. Color deep pink, fine form, a profuse bloomer. Strong field-grown plants, \$25.00 per 100; 4-in. pots, in bloom, \$15.00 per 100.

NURSERY DEPARTMENT

CONDUCTED BY
JOSEPH MEEHAN

AMERICAN ASSOCIATION OF NURSEYRYMEN

F. H. Stannard, Ottawa, Kan., President; N. P. Stark, Louisiana, Mo., Vice-president; John Hall, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., treasurer.

NEW HAVEN, CONN.—Ernest F. Coe, president of The Elm City Nursery Co., sailed this Saturday, Jan. 22, on the White Star Line Steamer Baltic; he will visit the important European nursery centers.

YORK, N.E.—C. S. Harrison, of the C. S. Harrison Select Nursery writes us: "Our firm, on account of our growing business, reaching from Winnipeg to Mobile, have been compelled to buy more land and double our plant. Peony sales, especially in the retail department, were very heavy last Fall."

MUSKOGEE, OKLA.—The Durant Nursery Co. of Durant, Okla., is planning to establish a branch establishment in this town.

DALLAS, TEX.—The Midwinter meeting of the Texas Nurserymen's Association was held at the Southland Hotel on Friday, Jan. 14. A very interesting program was provided.

PORT ARTHUR, TEX.—A large nursery, in which millionaire John W. Gates is interested, is being established here. The nursery is planned to be one of the most complete in the South, and work has already begun getting ready for the new buildings and greenhouses. The enterprise is capitalized at \$40,000.

Shrubs for Easter The forcing of shrubs for Easter use is now common everywhere, but in many places seems confined to too few varieties. Men of wealth are numerous in these days, and they are pleased to get for their homes for Easter plants in bloom, and if the plant be something uncommon there is no hesitation in paying a good price for it. The number of shrubs now used is far too small alongside of those that could be used. The flowering Almond, flowering Plum, Magnolia stellata, Spiraea Van Houttei, Azaleas, Deutzias, Hydrangea Hortensia and Japan Snowball about covers the list of hardy shrubs one may look for, which leads one to ask why not add to it these: Weigelas, Laburnum, Wistaria, Caragana, Crataegus, Exochorda, hardy Hydrangea, Tartarian Honeysuckle, Mock Orange, Golden Currant and such Spiraeas as Billardi.

All of these are beautiful when in flower, and all flower in early Spring, or shortly afterwards. When Easter is late some of the very earliest of flowering shrubs are in bloom outdoors, such as the Golden Bell, for instance, but even then small plants in pots are valued for use indoors. The various Hawthorns (Crataegus) do not flower well when young, unless they have been properly treated for the purpose. This consists in growing them in pots for a year or two in advance, or else in root pruning them a season or two ahead, the checking by either process causing them to flower. The Golden Currant is the Ribes aureum, a much neglected shrub. Its yellow flowered racemes are much admired. It is old in collections, and it is a wonder it has never been taken hold of by florists for forcing.

The hardy Hydrangeas mentioned are the new ones, alba grandiflora and cinerea sterilis, the latter is the Teas' Snowball Hydrangea. These force well, though requiring more time than some other shrubs, but no more than the H. Hortensia does, and this is a well-known Easter plant.

Among Lilacs for forcing one rarely or never sees those of the Hungarian type. One called villosa, a cream white one, is an excellent pot plant, but it takes a week or two longer forcing than the common Lilacs. A forcing starting say six weeks in advance of Easter is usually sufficient for the greater number of the shrubs named, but the potting of them should be done as far in advance as possible.

Hardy Rhododendrons Getting ready for Spring, which a month or two will bring us, the Rhododendron lists will be examined, looking to the securing of hardy varieties of this lovely evergreen. A list of hardy sorts given by F. L. Harris, and published in a contemporary journal some years ago is today as reliable as it was then. This is it: Album elegans, Atherosanguineum, Chas. Bagley, Edward S. Rand, Francis Dixon, Kettledrum, King of Purples, Album grandiflorum, C. S. Sargent, Chas. Dickens, Everestianum, Guido, Lady Armstrong, Welleslianum, Alexander Dancer, Caractacus, Delicatissimum, F. D. Godman, H. W. Sargent, Lady Grey Egerton, Mrs. John Clutton, Mrs. R. S. Holford, Ralph Sanders, Old Fort, Rosabel, Purpureum grandiflorum, Roscum elegans and Sir William Armstrong.

Experience proves true that situation as to shade from sun and wind has a great deal to do with hardiness. A native Rhododendron, for instance say the maximum or Catawbiense, set out in a bleak place fully exposed to the sun, would likely be in a moribund condition by the time Winter was through with it. The same bush set in a sheltered place where little sun or wind reached it would be in first-class condition when Spring came. All Rhododendrons desire shade in Winter, no sunshine on them at all, then if there is a good layer of leaves over the roots as a protection from hard freezings many sorts deemed tender would prove hardy even in severe Winters.

A fourth one is from the Pacific Coast; it is *C. occidentalis*. It is hardy at Philadelphia. In character it is more robust than the others, the shoots stronger, the leaves and the flowers larger. The color of the flowers is of a brick red rather than the brownish red of the others, and they come in Midsummer, not in Spring as the rest do, too late for seeds to form.

Larix But few trees are better known to every-
Europaea one, whether horticulturists or not, than the European Larch. In its own country it is a prominent one in all forest plantings, perhaps not so much for the value of it for timber purposes as for its

uses in so many other ways. But it is wholly as an ornamental tree that it appeals to planters here; and from the earliest days it has been a favorite tree to use, and one which is contained in all grounds of any extent.

The European Larch is one of the very first trees to come into leaf in Spring and, because of this, European planters say it is often affected by a late frost, which destroys its foliage for the time; but this rarely occurs here, for early though its start it is not so early that frosts are apt to catch it. But wise planters see to it that it is either transplanted in the Autumn or very early in Spring, in fact as soon as the frost is out of the ground.

As well known, the Larch is really a coniferous tree, as much so as a Pine, differing only in dropping its needles in Autumn, being a deciduous tree. When freshly clothed with foliage in Spring it is one of the most admired trees on a lawn, and this is for the reason that with its lovely green drooping foliage there is a tree of

Larix Europaea. The European Larch

The Calycanthus Family

If we add to the Calycanthus family a former member of it, which is now classed in another genus, Chimonanthus, thus, we have four of these popular shrubs, all renowned for their fragrance. These are *C. præcox*, *C. floridus*, *C. laevigatus* and *C. occidentalis*. The one of greatest fragrance is the *C. præcox*, or Chimonanthus fragrans, as it is called today. The flowers appear on the naked branches, in early Spring, small, yellow blossoms, but very sweet. Unfortunately it has the character, peculiar to several other Chinese shrubs, of desiring to expand its flowers with the first sunny days of Spring, or in late Winter rather. A week of mild weather in February will cause them to expand, so that the freezing later, which is sure to come, destroys them. It is, therefore, a good way to pot a plant or two of it in Autumn, place them in a cool place until within a week or two of desiring their flowers, then introducing them to heat. The fragrance is so sweet and powerful that the odor of a single flower is sufficient to permeate a whole room.

C. floridus is the old Sweet Shrub, known and valued wherever grown, because of its fragrance. This is a southern species, but quite hardy in the Middle States, and is the one found around many old residences in the older cities. It is not abundant anywhere, for the reason that it rarely seeds, hence its propagation depends on division of old plants and cuttings made of its roots.

A spurious species, or perhaps but a variety, is one called *laevigatus*. It is an abundant bloomer, but though of the brown color of the other there is little fragrance to the flowers; or if there is, it is not an agreeable one. It is a shame that this one is largely sold as the good old *floridus*, being not nearly as good.

beautiful outline. Care must be taken when young that the leader is straight and unbroken. There then results a tree of admirable outline, a well-shaped pyramid, with a nice wide base.

Mentioning its transplanting, it is not a tree that will endure neglect at such a time. Being, as said, a coniferous tree it no doubt partakes of the general character of these trees in this respect, as it is within the observation of planters that if coniferous trees are permitted to become dry at the root at transplanting time they cannot be revived by moisture, as other trees can; and from this it will be seen how important it is that the roots of the Larch be kept moist from the time of digging until well secured in its new position.

Much of the beauty of the Larch comes from the drooping tendency of its newly made shoots. Until Autumn they keep up their drooping habit, but eventually they become straight. In this it is not alone. The Hemlock Spruce does the same; so do some other coniferous trees. The observation already made to look well to having straight leaders to Larch will be understood as being well timed, when viewing the trees in the Winter season. Then it is that, bereft of leaves, the tree is still an object of enjoyment if with a clean straight trunk.

It is strange that with forests of Larch in our northeastern States our *Larix Americana* is rarely seen in cultivation here. The few to be met with on lawns show it to be a tree of strong growth, stout branches, and less bushy than the European. Both our native one and a Japanese species, *L. leptolepis*, are in demand in Europe for timber purposes, possessing valuable qualities in that respect, and as a disease has appeared among the native Larch there some substitute is looked for.

You are cordially invited to attend the Public Test of

APHINE

AT THE BOSTON FLOWER MARKET

One A-Park Street, Boston, Mass.

Saturday afternoon, January twenty-second, Nineteen-ten

between the hours of two and five o'clock

We will be pleased to have you submit at this test any plants, shrubs, or stock that may be infested with insects or disease, so that we may demonstrate to you the wonderful merits of this new insecticide discovery—Aphine.

Yours respectfully,

APHINE MANUFACTURING COMPANY

Madison, N. J., January 15, 1910.

New York, March 16-18, 1910.—Exhibi-
tion of The American Rose Society, at
the American Museum of Natural History,
77th st. and Central Park West.
Secretary, Benjamin Hammond, Fishkill-
ton-Hudson, N. Y.

Boston, Mass., May 26-30, 1910.—Great
Exhibition of Orchids and other plants,
by the Massachusetts Horticultural So-
ciety. Secretary, William P. Rich.

Morrisville, Pa.

On the evening of Jan. 14 the Wm. H.
Moon Co. of Morrisville, Pa., gave a
dinner for their foremen and office men,
about sixteen in all. After a bounteous
meal, including oysters, turkey, and dai-
ties of the season, a lecture was given by
Henry T. Moon on "Nurseries and Points
of Horticultural Interest at Home and
Abroad," the talk being illustrated by a
superb collection of over 150 lantern
slides. Short speeches were made by
members of the firm and others, and
music was rendered by some of the
guests.

One picture, of particular interest,
shown, was that of two Pear trees, sold
by the great grandfather of the present
proprietors, in 1775. These trees are
still in good condition and bearing fruit.
This was the first sale of trees on record
in this family, which has been en-
gaged in horticulture down to the present
day. Their establishment, known as the
Glenwood Nurseries, now covers nearly
500 acres, and is almost exclusively de-
voted to the growing of ornamentals.

New Orleans

The holiday trade in this city was
generally above the average, especially
in plants, of which there was a good
supply.

We are experiencing a prolonged cold
spell, nothing to be compared with what
you have been getting in the North, but
it put an end for the season to the Poin-
settias, which is the Winter glory of the
New Orleans gardens, while the Rubber
trees which, in many gardens, have
grown to the size of shade trees, have
been sadly disfigured.

A. E. Weller, for many years head
gardener at Audubon Park, has resigned
and will superintend an experimental
farm at Little Woods. Henry David, a
very competent man, has been appointed
in Mr. Weller's place.

James A. Newsham has just received
a fine consignment of Cattleya labiata
from his collector. His new Cattleya
house is completed and stock moved in.
He has now in course of construction
another house to be devoted mainly to
Asparagus for cutting.

CRESCENT CITY.

Florists' Wooden Novelties

It is not very generally known that
there is, in the city of New York, a concern
which is engaged almost wholly in
the manufacture of Art Wood Novelties
for the florist trade. This concern is the
Forster Mansfield Mfg. Co., whose fac-
tory is at 145 West 28th st. Last Easter,
and at Christmas their productions
in the way of plant tubs, pedestals, plant
holders and receptacles were strongly in
evidence in the stores of leading New
York florists, most of them remarkable
for their artistic design and novel finish.
Mr. Beuplan, the proprietor of the busi-
ness, has had a long experience as an
art craftsman with wood, and as his
business has been very largely with the
florists' trade he is able to forecast trade
ideas and have suitable novelties ready
for all special seasons and occasions.
Window boxes, grills and lattice work,
are turned out in quantities, in less time
and at much less cost than when such
are made by an ordinary carpenter, to
say nothing of the art finish given them.
Mr. Beuplan, understands thoroughly the
requirements of retail florists and designs
and manufactures fittings and decorations
for store interiors and exteriors, florists'
store furniture, ice boxes, in fact, any-
thing a florist can use that is made of
wood.

The concern figures largely in the decorative
field. There is always material on
hand for erecting light screens for
church or house weddings, and frame-
work for florists is put up in a few hours,
no matter to what extent required.
Mr. Beuplan had the contract for much
of the work on the Court of Honor at
the Hudson-Fulton celebration, for which
work he was highly complimented. The
retail trade, generally, should bear this
house in mind when in need of articles or
fixtures made of wood, artistically fin-
ished.

New Haven, Conn.

New Haven is one of the largest cities of the New England States and located about 75 miles from New York City, on the Shore Line division of the New York, New Haven & Hartford R. R. It has a population of about 135,000. Yale College is located here and the local florists have generally derived considerable trade from the students, but this season the student committee decided to "cut out" flowers for the annual "Prom." week, and the local stores will fall short on flower sales.

Prof. J. W. Toumey is director of the Yale Forest School and the Yale Botanical Gardens, which include a general assortment of plants, shrubs, etc. The glass comprises some 3500 sq. ft. and the houses are managed by John H. Murray, who has just retired from the president's chair of the New Haven County Hort. Society. The students of the Forest school number about 80, about half of which will graduate this coming Spring.

The recently burned Conn. Agri. Experiment Station was formerly in Middletown, Conn., and was established in 1877, being one of the first in the country. Prof. W. E. Britton, the State Entomologist was appointed in 1901, and has done excellent service in the war against the gypsy moth. The collection of insects comprises some 40,000 specimens and includes 4000 species found in this State. Prof. Britton has issued a hanger card, which is sent to every post office and railroad station in the State, for purposes of instruction in ridding the State of the gypsy moth.

S. H. Moore & Co. have their store on Chapel st., opposite to Yale College, which location helps considerably in getting the College trade. Mr. Moore has been in the trade since 1881 and reports the past Christmas business as being the best he ever had. His double bulk windows are excellent for display and he has them very attractively decorated.

J. N. Champion & Co. of 1026 Chapel st., have been here for the past 20 years and have a fine corner window and nice roomy store, nearly opposite Yale campus, and on the main business street. Christmas business was excellent and considerable funeral work is on hand at present.

W. H. Long, 748 Chapel st., is doing a lot of funeral work and reports good trade in potted stock during Christmas week. A large quantity of Japanese basket ware, of grasses, was disposed of during the holidays.

Edw. J. Morse has some 50,000 sq. ft. of glass at 536 Townsend ave., in which he grows a regular assortment necessary to supply his retail store at 37 Church st., opposite the post office. He has been in the growing business for the past nineteen years and for the past two years has had a retail store. The store has a very nice window and is one in which the floral artist can do his best.

Chas. Munro, 974 Chapel st., has his store in an excellent location, opposite the "Green," and recently took over some 30,000 sq. ft. of glass at 657 Townsend ave., where he grows Roses, Carnations, Lilies and bedding stock. Alfred Nyren, formerly with A. N. Pierson, has been secured as foreman. The store trade was unusually fine during the holidays. Mr. Munro issues two catalogs, and these help to a great extent toward better business. A Lord & Burnham boiler has just been installed and gives good satisfaction.

Frank S. Platt conducts a general seed store and flower-shop, and does a regular florists' supply business, in which he has the advantage of being the only supply house between New York and Boston. The flower shop is the oldest in this city and several of the local florists were taught their first lessons in design work under Mr. Platt. Mr. A. L. Doolittle, the present manager of the flower store has been here nearly 15 years. A large quantity of Tulips were forced at the greenhouses on Sherman ave., for the Christmas trade, and proved to be good sellers. The seed department has all it can do at present and is picking up for the Spring trade. The greenhouses comprise some 15,000 sq. ft. of glass and are devoted to growing stock for the store and also a quantity of nursery stock. Some 100,000 Tulips were forced for the holiday trade.

L. Wolf has 5000 sq. ft. of glass at 82 Day st., and grows stock necessary to supply his retail store at 180 Meadow st. Funeral work is very brisk and the Christmas trade was excellent. Mr. Wolf is one of the oldest florists in town and for the past 14 years has run the retail store in connection with the growing end of the business, which he estab-

Carnation Dorothy Gordon

Joseph Heacock Company, Disseminators, Wyncote, Pa.

lished some 50 years ago. He started in this country with Buist of Philadelphia, and was for some time with Peter Henderson before coming here.

E. H. Meade, 109 Woodward ave., is the only exclusive grower of Violets in New Haven, growing under about 2500 sq. ft. of glass, such varieties as Marie Louise and Farquhar. These houses were built some ten years ago. Most of his stock is sent to out-of-town retailers.

J. H. Slocombe, 555 Townsend ave., has 20,000 sq. ft. of glass devoted to Violets, Sweet Peas and Freesia, only. One big house was erected this past Fall and

Mr. Slocombe grows after plans of the Rhinebeck, N. Y., Violet growers, and has considerable success. Asters, Dahlias and Cosmos are grown in Summer.

Fred. G. Horn, 418 Woodward ave. has been here some 14 years and at present does a wholesale and retail business, operating 8000 sq. ft. of glass. Carnations and Violets are the principal stocks, although he grows considerable bedding and bulbous stock. Mr. Horn is located near the water, and during his spare moments is occupied with his launch.

Ernest Carroi, of "Grants Corner," has about 5000 sq. ft. of glass and during the

Winter does considerable wholesale business in plants and flowers. Some fine specimens of Palms, Cycas and Ficus are shown here, the Ficus being over 20 ft. in height and about 10 in. in diameter at base of trunk. A Philodendron pertusum, in fruit, is also shown.

Chas. Conte, 735 Grand ave., is erecting 5000 sq. ft. of glass at South End, near the lighthouse, in which he intends to grow Carnations, Ferns and bedding plants. He has been in the trade for 16 years, the past three in his own store. Some good Christmas and funeral work is here reported.

Grow this Carnation for Big Profits in 1910!

After two years of careful watching and tending—giving it every opportunity to show its defects, if it had any—

After putting it on the cut-flower market and seeing it produce a sensation in the retail field, and after hearing it highly praised by every prominent grower who saw it—

After all this, we are ready to PROVE that our new Carnation Dorothy Gordon, of which you have heard so much recently and which is illustrated on the preceding page, is a real, genuine success—and that the grower who has it will make money!

Carnation Dorothy Gordon has a rapidly widening circle of friends; you'll surely begin to grow it for your trade sooner or later. This is your opportunity to get in NOW. Here are some of the noteworthy features of this new Carnation:

Vigorous constitution—freedom from disease.

Carnation Dorothy Gordon

Bring a price fifty per cent higher than buds of Enchantress, according to our actual experience for two years in the markets of Philadelphia. In other words, we have made Dorothy Gordon show up double the profits of Enchantress under the same conditions and with equal care. Here is a little table of figures based upon our own sales, that explains it:

100 Enchantress, worth say . . .	\$6 00
50 per cent extra realized for Dorothy Gordon	3 00
	\$9 00
One-third more Dorothy Gordon from same number of plants . . .	3 00
	\$12 00

We're enthusiastic, to be sure, but in Dorothy Gordon we have something to support it, as the above table will show.

Up to October, 1909, without a particle of advertising, we had sold 60,000 rooted cuttings of this Carnation on its own merits at the prices given below. While we have now greatly enlarged our facilities, it is still evident that our present supply will not be adequate to meet the demand. Dorothy Gordon is in the hands of an experienced propagator at our plant, and we quote strong rooted cuttings at the following popular prices:—

\$10 per 100, \$75 per 1,000

That we are maintaining these figures is shown by our books, which are open to inspection at any time.

Our plant is likewise open to you—we urge you to come to Wyncote and investigate this worthy new Carnation for yourself. "Seeing is believing," and if we cannot sell Dorothy Gordon on its own merits we do not want to sell it at all.

We are easily reached from Philadelphia—twenty-five minutes from City Hall on the "Reading," with a service of 100 trains a day through the week. We're open every day except Sunday, and will welcome you at any time.

But don't put it off—you owe it to yourself to investigate Dorothy Gordon. If you cannot do it in person, drop us a line for full particulars.

Again—**don't put it off!**

Extract from the minutes of the Florists' Club of Philadelphia, January 5, 1909

Your committee on Novelties visited the establishment of Joseph Heacock Company and examined their new Carnation, "Dorothy Gordon," on December 30. The variety resembles Rose Pink Enchantress in color and form, but it is superior to that variety in being of a more uniform color, and is also larger and of greater substance. It is of stronger constitution and has a stiffer flower stem. Your committee tested the keeping qualities and find them to be good. The flowers were kept in an ordinary potting shed, and were salable four days after being cut.

(Signed) EDWIN LONSDALE }

CLUBS and SOCIETIES

Nassau County (N. Y.) Hort. Soc.

The regular monthly meeting of the Society was held in Pembroke Hall, Glen Cove, N. Y., January 12. The newly elected officers were at their posts; President James Duthie occupied the chair. Over forty members were present and four new ones were elected. The president opened the meeting with a well directed address looking to the welfare of the Society; he was well applauded. The annual dinner of the Society will be held at the Oriental Hotel, Glen Cove,

Jan. 25, and we want to tell those who care for a grand feast and a jolly good time to get their tickets at once. A splendid exhibit of Carnations was made by Geo. Wilson, which well deserved the cultural certificate bestowed, for Enchantress and White Perfection like those he put up are hard to beat. Mr. Wilson promised to teach us at next meeting how to grow beauties like those exhibited.

Instead of the point competition, it was voted to have monthly prize contests, and the February meeting will be Carnation night. Three prizes are offered by the Society for best vases of 12 white, pink and red, respectively, also a cultural certificate for best vase of 12 mixed

Carnations.

A first prize of \$10, donated by President Duthie, and a second of \$5 offered by A. Morrison, are to be awarded at the end of the year to the two competitors winning the largest number of prizes.

With a good reserve of cash in bank, a fine set of officers, James Duthie in the chair, an executive committee who know how to do business, trustees as good as bankers, there is no doubt but that 1910 will be the banner year of the Society.

OSCAR E. ADOOR, Rec. Sec.

New Haven Co. (Conn.) Hort. Soc.

The monthly meeting of this Society was held Jan. 12, 1910, for the purpose

of installing the newly elected officers but, owing to press of business, all were not able to be present and the installation was postponed until the next regular meeting, the second Wednesday of February.

The retiring president, Mr. John H. Murray, was presented with a fine oak rolltop desk as a token of appreciation by the Society.

The new officers are John N. Champion, pres.; James Kydd, vice-pres.; David Kydd, treas.; Fred H. Wirtz, sec.; John C. Morton, press sec. The president, vice-president and press secretary are new officers. The meeting was followed by a smoker and the members were entertained until a late hour by a series of songs by a quartette composed of Messrs. Murray, Bell, Morton and Jas. Kydd. Stories and short pointed remarks were made by Messrs. Tweeddale, Morton, Thompson and others. Refreshments of coffee, sandwiches, etc., were served by the committee. New members joining this night were Adam Patterson of Saugatuck, Conn.; J. T. Burns and Wm. E. McGuinness of New Canaan, Conn.; C. Spanagel of New Haven.

The total membership is 150 and new members are added at every meeting. The attendance at each meeting is a fair proportion of the membership and a good program of speakers and papers are planned for the coming year. The treasurer's report shows a good healthy increase over the previous year and a promise of still better for the coming year.

This Society was incorporated in May, 1902, and is one of the oldest in the country. The present board of management consist of the officers, and Messrs. Rolt, Paton, Wm. Beattie, Richard Bell and John H. Murray. P. M. R.

G. and F. Club of Boston

The past twelve months has been the most prosperous in this Club's history. During the year there has been an average attendance at the monthly meetings of 162. The largest attendance was at the January meeting, when there were 223 present, and the smallest at the February meeting when there were 95 present. Forty-six new members were elected and the Club has now a membership in good standing of 354.

The Club made a total of 91 awards for exhibits including one Report of Highest Merit, one Report of Superior Merit, 11 Reports of Merit, 9 Honorable Mentions and 63 Votes of Thanks.

The largest amount received for dues was during January. The secretary handled 7925 pieces of mail matter, including 2000 letters, 775 postals and 5150 circulars.

Is there any club in the country can beat this for a yearly record?

JOHN W. DUNCAN.

St. Louis Florists' Club

The St. Louis Florists' Club held its regular monthly meeting on Thursday afternoon, January 13, at 2 o'clock. This being the first meeting in the new year, the attendance was quite large and several features were presented during the afternoon that made things very interesting for the members.

Baur & Smith of Indianapolis, Ind., exhibited a fine large vase of their new white Carnation Shasta, around which was centered a group of local Carnation growers. There was also on exhibition a thermostatic instrument by the National Clock & Electric Mfg. Co. of St. Louis, in charge of C. M. Davidson, who demonstrated its merit.

President Windler opened the meeting at 2 o'clock with all his staff of officers present. C. DeWever reported on his paper "Advertising through the Florists' Club." This was put into the hands of a committee consisting of Mr. DeWever and John Cannon, to report at the next meeting. W. A. Rowe, a grower from Kirkwood, was elected to membership. Henry Wenzel and Chas. D. Hecht, two growers of Aulicum, St. Louis Co., made application for membership. President Windler appointed Carl Beyer, W. C. Young and F. J. Fillmore a committee to look into the merits of the new white Carnation Shasta, as exhibited by Baur & Smith, and they made the following report: "We, the committee, think Shasta, the new white Carnation, is an improvement on any existing white variety, more particularly on account of being heavily fringed."

Ex-president Young gave an interesting talk on his recent New Orleans trip. C. M. Davidson, representative of the National Clock and Electric Mfg. Co., gave a demonstration of the working of their thermostatic machine, to the great satisfaction of all growers present. Frank Fillmore was next called upon to read his paper on "The Troubles of a Grower," which created a great deal of amusement for the members. The president asked Mr. W. C. Smith to read a paper at the next meeting on "The Troubles of a Wholesaler," which proposition Mr. Smith kindly accepted. A vote of thanks was extended to those who entertained the members during the afternoon.

February 10 is the date for the next meeting of the Club. ST. PATRICK.

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in General.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published every Saturday by the A. T. De La Mare Ptg. and Pub. Co. Ltd., Proprietors, 2, 4, 6 and 8 Duane Street, New York. A. T. De La Mare, president and managing editor; Jas. H. Griffith, secretary; David Touzeau, treasurer. The address of the officers is the address of this paper. Short address: P. O. Box 1697, New York. Telephone 3765-6 Beekman

PRINCIPAL OFFICES

Chicago: Margaret T. Flint, room 614, No.-60 Wabash Avenue; tel. Randolph 2000. Office hours: 9.30 to 12.

Boston: J. W. Duncan, Jamaica Plain, Mass.

Philadelphia: A. H. Secker, 306 Wood Building, No. 34 So. 16th St.

Yearly Subscriptions.—United States and Mexico, \$1.00. Canada, \$2.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Draft on New York, Post Office or Express Money Order; if paid in cash please register letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

Registered Cable Address: Florex, New York.

Telegrams.—Telegrams received in this office up to 3 p.m. Wednesday, containing changes in advertising, will receive attention for the issue of the Saturday following; likewise, telegrams having informative matter intended for our news columns will be received up to Thursday 9 a.m. News telegrams should be forwarded after 5 p.m. Wednesday and marked "Night Press Message, Collect." These will be forwarded by the Telegraph companies at their newspaper rate, providing the material so forwarded contains news for the paper.

Index to the Florists' Exchange, Vol. XXVIII

This index, covering the period from first issue in July to last in December, 1909, will be shortly ready for distribution. Subscribers desiring a copy of this index can obtain same by notifying us by post card; copies will be mailed to those who have already previously advised us to that effect.

The Florists' Exchange Design Book

A new edition of the Design Book is now in preparation and, it is expected, will be issued about January 29. It will be found a decided improvement on the earlier editions, has been completely remodelled and now contains 80 pages, covering a multiplicity of designs. It will be freely admitted the most valuable compendium of its character ever offered to the trade, as well as the cheapest. It is sold only in connection with a subscription for this paper; The Florists' Exchange two years and one copy of the Design Book, new or renewal subscription, for \$2.50.

Transparent Envelopes for Sealed Packet of Seeds

There has been some excitement, principally emanating from one section of the country, over a ruling made by a local postmaster in which that individual attempted to stop the mailing of sealed packets of seed in any enclosure but that made from transparent paper. We have good authority for the statement that whatever may happen in the future, no such ruling is at all likely to be made against any legitimate seed trade house this season.

Western New York Horticultural Society

This old established organization will hold its 55th annual meeting Jan. 26 and 27, at Convention Hall, Rochester, N. Y. It now has a membership of over 1400 and is still steadily progressing. The subjects of the essays and discussions are almost entirely in the line of fruits and vegetables, and considerable attention will be paid to spraying methods and spraying apparatus.

Two instructive exhibits will be, respectively, those made by the Entomological Department of the New York Exp. Station, illustrating various injurious fruit insects, and the Department of Plant Pathology of the New York State College of Agriculture at Cornell University.

In connection with the meeting will be held a competitive fruit and vegetable exhibit, for which moderate prizes are offered.

The Barry Gold Medal is offered for a new fruit, ornamental tree or shrub, flowering plant or vegetable. Full programs can be had from the secretary of the Society, John Hall, Rochester, N. Y.

The Gardeners and Florists' Club of Boston challenges a statement of equal showing for a year's record as to membership, average monthly attendance, etc. See "Clubs and Societies."

New York to Pittsburgh

It has been arranged that the party composed of members of the New York Florists' Club and their friends, with possibly several of the trade from New England, who will attend the convention of the American Carnation Society at Pittsburgh, Jan. 26-27, will leave on a special car attached to the train on the Pennsylvania Railroad leaving Cortlandt st. on Tuesday evening, Jan. 25, at 8.30 o'clock. The rate of fare one way, going, will be \$8.75 on a block ticket of ten or more, and \$2.50 for a Pullman berth. Arrangements can be made for a return journey at the same rate. This rate is quite a saving on the regular fare. Present advices indicate that the car will be filled. For the accommodation of those who wish to carry their exhibits with them, the heat will be cut off from the rear of the car, if necessary, so that the exhibits will travel under cool conditions. Anyone wishing to join the party should communicate with J. H. Pepper, P. O. Box 1697, or at the office of the EXCHANGE.

The American Carnation Society

Registration

The following registration of new Carnations has been made by Wanoka Greenhouses, Barneveld, N. Y.

RAINBOW.—White seedling×Enchantress. White overlaid with pink. Size 3 1-2 inches. Grand habit. Large, high built flower, making fine display. Fragrant, with long stiff stem and fine calyx. Fine keeper and shipper.

SULTANA.—Gov. Roosevelt×Mrs. Lawson. Light crimson. 3 to 3 1-2 inches. Fine form, free worker, ideal habit, long stiff stem and fine calyx.

S. A. F. and O. H.

Registration of Rambler Rose

Public notice is hereby given that the application of Mr. Southwick Cary Biggs of 1719 Lamont st., Washington, D. C., for the registration of the Rose described below, having been submitted to the American Rose Society on December 13, 1909, and no reply having been received from them within the required time, the registration becomes complete.

RAISER'S DESCRIPTION

Color: delightful shade of deep pink. Flower: 3" in diameter, semi-double, free-flowering, 5 to 7 blossoms on a spray. Habit: vigorous grower and very hardy. Parentage: Hybrid of Madame Gabriel Luizet×Vichuriana. seedling crossed by Baron de Rothschild.

H. B. DORNER, Secretary.

January 12, 1910.

Spring Exhibition of the American Rose Society

The executive committee of the American Rose Society and the council of the Horticultural Society of New York met at the American Museum of Natural History, New York, where the exhibition is to be held, on Wednesday, Jan. 12, for conference. Working committees were appointed to take the matter up in earnest, to prepare now for the coming exhibition. The facilities that are offered to the Rose Society for the event are superb.

The city editors of the New York papers have been notified, and requested to take notice of the show as one worthy of the fullest public support.

There will be a joint meeting of all the committees held within a few days to perfect the details. A new edition of the premium list will be issued covering all extra prizes that have been received.

We want everyone having anything that is worth showing to take an interest in it and send it along. If you cannot do anything better send us a single bouquet, but do something and give us the best you have got. This invitation is sent to amateurs and commercial men alike.

BENJAMIN HAMMOND, Sec'y.

The National Flower Show

The National Flower Show, under the auspices of the Society of American Florists and Ornamental Horticulturists, will be held at Boston, Mass., the latter part of March, 1911. So much has been already decided upon.

It has not as yet been arranged, however, what building in Boston will be utilized for the show, several having the desired qualifications being now under consideration.

The committee on the schedule of prizes, consisting of F. R. Pierson, chairman, John K. L. M. Farquhar, Thomas Roland, W. A. Manda, Robert Cameron, and Robert Craig, were in session almost continuously for two days and nights the latter part of last week, at the rooms of the Massachusetts Horticultural Society in Boston, planning and working out a list of premiums to be awarded at the show, the attractiveness of which will undoubtedly insure the largest and in every way the grandest display of plants and flowers ever seen in this country.

It is now planned and anticipated that \$10,000 at least will be devoted to prizes, and such liberal awards will be made in each individual class that the very finest floricultural productions of our own country and Europe will be entered in every division. The enthusiasm which made the National Flower Show a success at Chicago in 1908, seems, if such were possible, to have become more intensified, and that, both from a horticultural

and financial standpoint, this crowning effort of the S. A. F. & O. H. will be a most marked success there is no room whatever to doubt. As mentioned above, the prize schedule committee has given most freely of its energy and time for the good cause, and it will not be long now before the list of premiums to be awarded will be in complete form for publication.

Apart from the wonderful added interest this show will give to the cause of horticulture in this country, everyone in the horticultural business will also benefit in a commercial way, and, therefore, should do everything possible to help advance this truly mammoth undertaking.

Johanna Zeh

Johanna Zeh, widow of Philip Zeh, who was from 1857 to 1897 a florist at Twenty-third st. and Fifth ave., Brooklyn, N. Y., died Jan. 12, at her home, 4820 Fifth ave. She was born in Ireland, Aug. 15, 1835, and is survived by a son Charles, who is in the building business in Manhattan, and one daughter.

George P. Bloomer

George P. Bloomer, formerly of Brooklyn, N. Y., while making his way through the recent storm at Bellmore, L. I., where he lived, became exhausted and died on the veranda of a hotel. He was 82 years old. For many years Mr. Bloomer lived at Herkimer and Sackman sts., Brooklyn. For some years he had been in business as a florist at Bellmore.

David De Mott

David De Mott of Tenafly, N. J., died at his residence on Tenafly road, Jan. 12. Mr. De Mott is survived by a wife and one child, and his father, now in his 85th year. For the past few years he had been engaged in the florist business, making a specialty of Violets. Mr. De Mott was an ardent bicyclist, being the last man in this section to ride the old style high wheel.

Luther A. Line

Luther A. Line died at his home in Carlisle, Pa., Jan. 6, aged 75, as the result of a paralytic stroke sustained a week previously. He was for many years engaged in floriculture. The deceased was a close friend of General Fitzhugh Lee, whom he knew as a soldier at the Carlisle garrison and who as a Confederate general was compelled to shell Carlisle, his former home.

Mrs. James L. Towner

Mrs. James L. Towner, aged 62 years, wife of the late James L. Towner, died early Saturday morning, Jan. 8, at the Union Protestant Infirmary Hospital, Baltimore, after a short illness. She had many friends. Many handsome floral wreaths were received by the family. Interment was in Baltimore Cemetery, the following Monday. She is survived by one daughter and three sons, Grace La Fevre, Benjamin, John and James Towner. James L. Towner, one of the sons, has been with the old firm of Griffith & Turner Co., Baltimore, for the past thirteen years, is well known by the trade, and has a host of friends. Much sympathy has been expressed by the trade.

Joseph A. Dirwanger

Joseph Anton Dirwanger, at one time the leading florist of the city of Portland, Me., but who has been laid aside by illness for a number of years, died Jan. 14, at his home, 145 High st., in Portland, from a complication of disorders which have sorely afflicted him for a long time past.

Mr. Dirwanger was born in Bavaria, Germany, 83 years ago and learned the trade of a florist in the royal gardens of the King of Bavaria, then a separate country. He came to this country in 1831 and was first employed as a private gardener. Mr. Dirwanger subsequently went into business for himself, building his greenhouses in the rear of No. 717 Congress st. He was located there for a long time, nearly 40 years in all, and during that time was the leading florist of the city. Of late years, since age and infirmity grew upon him, he had withdrawn from business entirely, and of late he had been almost a helpless invalid.

He is survived by a widow and several children. He leaves also a brother, Albert, who, ton, has been a florist in Portland many years.

Richard Shannon

Richard Shannon, the well-known florist of Brooklyn, N. Y., died Jan. 16, at his residence, 172 A Clifton Place, Brooklyn.

Mr. Shannon was born in Ireland in 1837, and had been a resident of Brooklyn for nearly 50 years. He started in business in 1866 and built up a very large

trade, becoming one of the leading florists of the old city. In 1898 he took his son, David Shannon, into the business as partner, and the business thereafter was conducted under the style of R. Shannon & Son. The firm has a large plant, comprising fifteen or more greenhouses located on Greene ave., Brooklyn, near Greenwood Cemetery, where a general stock of decorative flowering and bedding stock is grown.

The deceased was probably the first Brooklyn florist to take contracts for decorating churches for special occasions, and houses for weddings and receptions. In his early days this was a novel feature, but grew rapidly in favor until today it is an important feature of the trade.

The firm started doing special work in Greenwood Cemetery in 1878 and this business soon assumed large proportions.

Mr. Shannon was a member of Hill Grove Lodge E. & A. M.; Evening Star Chapter R. A. M.; Clinton Commandery K. T.; Brooklyn Masonic Veterans; The Aurora Grata Bodies of the Scottish Rite; Unqua Corinthian Yacht Club of Amityville, L. I.

He leaves a widow and six children. The funeral was held Jan. 20, interment being made in Greenwood Cemetery.

Labor Saving Devices

At R. Vincent Jr. & Sons Co., White Marsh, Md.

Several instructive photographs showing the economic side of greenhouse construction and labor-saving devices employed at our establishment are here presented.

Figure 1—A regular farm wagon is used and the method of scaffolding can easily be seen from the photograph. The houses we have just finished are each 250x35 ft. The side posts are of cedar and locust, 7 ft. high. After they are set and the gutter plates are in place, the wagon is brought into play. At the first trip through the bars and ventilator frames are put up; then, on the return trip, the purlins, side posts and ventilators are set in place; on the last trip out, the cross braces and ventilator pipe and arms are erected and every part of the work completed that cannot be done from the ground. (See Fig. 2.)

The tables in the houses, which are the first of block E, are built crossways instead of longways. A four-foot walk up one side allows the man who handles the wheelbarrow, which carries 300 2-in. pots, to make a short carry, and enables him to move from 16,000 to 20,000 pots a day from the potting tables to the greenhouse benches. We have all our houses used for pot plants abled so as to be convenient to handle the material for the wheelbarrow. Block A—Six houses, 165 ft. long, have a wide walk up each end. Block D—Six houses,

The Carnation to the Fore!

The Nineteenth Annual Meeting of the American Carnation Society is to take place at Pittsburgh, Pa., on Wednesday and Thursday, January 26 and 27, 1910

In its issue of Saturday, January 29, The Florists' Exchange will give an account of the meeting, the Proceedings and the Exhibition.

The edition of February 5 will likewise be representative of the live trade interest which mention of the Carnation always excites.

The Informative Side

Growers and distributors of Carnations, whether they use our advertising columns or not, are requested to furnish us, for publication, notes on their novelties and on their experience with the leading standard varieties the past year.

The Advertising Side

Of especial value to advertisers of Carnation stock will be our edition of January 29, also that of February 5, and we invite the attention of all concerned to the particular advantages afforded by these issues, of making known their offers.

As to Advertising—

*The Opportunity is Yours
Do not let it go by Default*

Advertisements received up to
Wednesday noon, each week

The Florists' Exchange

(The Business Paper for Business Men)

Nos. 2 to 8 Duane St., New York

Handling 300 2-in. Pots at One Time on a Wheelbarrow

210x30 ft. long, have a wide walk up each end and across the middle, so that it is only necessary for plants to be carried, one box at a time, a little over 50 ft. We find this convenient, both in taking stock in and out of the houses, and consider that one man can easily do two and one-half times as much, and more easily at that, than he would if he had to carry one box or flat at a time.

Albert M. Herr
President American Carnation Society

The American Carnation Society

Nineteenth Annual Meeting
Pittsburgh, Pa., Jan. 26 and 27, 1910

Secretary A. F. J. Baur of the A. C. A. will leave Indianapolis on Monday night, Jan. 24, for Pittsburgh. All mail which will not reach him by Monday should be forwarded to him at the Fort Pitt Hotel, Pittsburgh.

The Carnation Exhibition

The 26th and 27th days of January, 1910, at Pittsburgh, Pa., will furnish great opportunities for your personal judging of Carnations, both old and new. They will all be present under one roof and there is only one way to judge them—which is to do it yourself. First, form your own opinion from the exhibits which confront you, then compare your impressions with the judgment of others, and you will have secured benefits and knowledge that will well repay the expense you may have incurred to obtain it.

Hotel Accommodations

The reception committee of the Pittsburgh Florists' and Gardeners' Club has issued a circular in which it is stated that there is every prospect that the hotels will be crowded during the week of the convention of the

American Carnation Society and advises delegates to engage rooms early. The Club strongly recommends the Fort Pitt Hotel, where the convention sessions, exhibition and banquet will be held. Following are the rates in force at the different hotels:

Fort Pitt Hotel. European. \$1.50 to \$3.50 per day.
Seventh Avenue Hotel. European and American. \$1 to \$3.50.

Hotel Henry. European. \$1.50 to \$4.
Monongahela House. European. \$1 to \$3.50.
Schenley Hotel. European. \$2 to \$4.
Hotel Duquesne. European. \$1 to \$2.50.
Hotel Anderson. American. \$3 to \$7.50.
Colonial-Annex. European. \$1 to \$2.
Hotel Lincoln. European. \$1.50 to \$3.

The reception committee has arranged for the entertainment and comfort of the ladies of the visiting members.

The convention of the American Carnation Society is uppermost in our minds and the work of all committees is well under way. The Finance Committee had very little trouble in getting sufficient funds from those in the trade and we expect to give all the visitors entertainment that should please them.

Last week a joint meeting of all committees was held and everything was outlined; another similar meeting is to be held a few days before the convention, at the Fort Pitt Hotel and the finishing touch will then be added. The Florists' Club has mailed to every member of the Carnation Society a list of hotels, giving rates, and requesting them to secure rooms in advance, which is very necessary, as our hotels have had a very prosperous time since the new year.

The Fort Pitt Hotel, where the meetings and exhibition will be held, is a veritable "beehive," a very lively

Fred E. Dörner
Treasurer American Carnation Society

place, which you will readily perceive when you get here. A postal card was enclosed with list of hotels requesting all to state whether they will be with us or not, and how many; if this is returned promptly it will give us an idea of how many are coming and facilitate matters in making arrangements for their entertainment.

Mr. A. W. Smith, Jr., manager of the exhibition, states that there will be very little space for anything outside of Carnations, but it is likely that the hotel can make arrangements to accommodate would-be exhibitors with special rooms which would have to be engaged in advance. The Fort Pitt is a little over a square from the Union Station on Penn. ave., and three or four squares toward the business center. On Penn. ave. are several more good hotels, the Seventh Ave., Anderson and Colonial-Annex.

The H. J. Heinz Co., known all over the world, has extended an invitation to all visitors and our home florists to visit their immense plant on the North Side, and see how the "57" varieties are put on the market; besides they invite us to be their guests at a luncheon.

A smoker will be held on the first evening (Wednesday), to start about 9 p.m., after everybody is through with the day's work. The ladies will be tendered a theater party and luncheon following. The banquet will take place Thursday evening, about 8 o'clock, at the Fort Pitt Hotel, and we expect to have between four and five hundred people at table.

Fred Burki expects to have a good-sized delegation visit the establishment of the Rose and Carnation Co., at Bakerstown, on Friday morning, a place worthy of a visit, as it is equal to anything in the country.

The Phipps conservatories in Schenley Park and in the North Side Park will be glad to receive visitors; both places are easily reached in fifteen minutes from the heart of the city.

Fred Burki
Vice-President American Carnation Society and President
Pittsburgh Florists' Club

There are quite a few commercial places of some magnitude worthy of a visit, all easily reached by electric cars in short time. E. C. REINEMAN.

Solid Beds for Carnations

While it would be folly to make a positive statement that either the solid bed or the raised bench is the better method of growing Carnations, there are some good points to be brought out in favor of the solid bed. Although, practically, all the matter that may be brought up in a discussion on this subject would apply as well to the growing of Roses as to Carnations, the subject will be treated in connection with Carnation culture in this case.

Where the soil is very light there is less difference in the results when growing Carnations on the bench's as compared with the beds. The light soil dries out readily and, consequently, the raised bench causes less trouble; but with heavy soil the drainage is not free enough and here the advantage is easily with the solid bed.

The one really important point to be considered, when choosing which shall be used, is that of drainage. The temperature in a Carnation house is not sufficiently high to assist, in any marked degree, the using up of the

A. F. J. Baur
Secretary American Carnation Society

A. W. Smith, Jr.

Manager Exhibition Committee Pittsburgh Florists' Club

One item which is of great importance in this connection, and which is bound to be considered by any florist, is the question of cost. No florist is apt to overlook this part of the question. Were this the only thing to be considered the solid bed would easily have the advantage.

The various methods of construction seen in different establishments differ but little. In some cases concrete sides are used, making a permanent neat bed. The sides may be any height desired, differing in accordance to what is under the beds. Where there is a porous, gravelly foundation, it is only necessary to have the sides high enough to hold the proper depth of soil. Of course, these very low beds are not easily worked, the mulching, tying and watering being more difficult than in the case where the sides are higher.

If a good, thoroughly practical and convenient bed is desired, without any great additional expense, the sides may be from 12 to 15 inches high, filling in with gravel, allowing five inches for soil and mulchings. This will give a perfectly drained bed of a very neat appearance, and if well constructed should last without regard to time.

Some of the first experiments in this connection, while successful in a degree, have been improved upon, and profiting by these earlier ideas of construction it is possible to now build beds of very neat appearance.

It is not necessary to have them bulky and clumsy looking, as a wall 1 1/4 inches at the top and 3 inches at

Chas. S. Crall

Chairman Reception Committee Pittsburgh Florists' Club

William Falconer

Chairman Press Committee Pittsburgh Florists' Club

the bottom is strong enough to stand all the strain necessary to put on it. The inside should be straight, with the slant on the outside, which will make the sides withstand the strain from the soil and gravel.

The following formula for the mixing of the concrete has given the best of success, and is given here as a safe one to follow; although a cheaper formula may be used by cutting down on the amount of cement this could hardly be advised. Portland cement should be used, as the cheaper grade does not give satisfaction. Use one part Portland cement, three parts sand—a coarse propagating sand would be the right grade—and five parts gravel; the gravel to be coarse but the largest stones to be no larger than a pigeon's egg. This should be mixed thoroughly and it must be kept mixed while using it, or the heavier gravel will settle and cause trouble.

The handiest way to manage the building of the beds would be to make the forms in sections, so that one bed may be set up complete. The concrete should be poured into the molds, and by having a gang of men on the mixing and carting the work can be carried right along until the whole bed is finished. It will then set evenly, showing no joints or weak places from piecing out.

No reinforcements are needed, excepting at the corners, where it is well to sink an iron made of a rod about the size of an ordinary pencil. This should be bent to go around the corners, with a prong bent down on each end, which will bind the corners securely.

The molds should not be removed inside of two days, and after removing them, if the sun is strong and the

atmosphere dry, the concrete will be much benefited by an occasional spraying of water. This will avoid the danger of the sides cracking.

When once the concrete is well set there is very little danger of the sides not holding. The critical time is when the work is new. Get the material into the beds at the earliest moment, when the soil can be kept moist and the concrete benefited.

In planing the molds they should be built in sections, ready to be put together easily with cross pieces sawed to the proper length, then when work is commenced there will be no hitch. All nailing of joints should be done with the fact in mind that the molds must be taken apart and reset. If the nails are driven in only far enough to hold, they may easily be redrawn and there will be less danger of breaking to the new concrete.

The greatest danger of breaking down the concrete is while the molds are being taken off. Bear this in mind and arrange all details so that the molds may be easily removed.

Where there are a number of beds it is well to have two or more complete molds so that the work may be carried on rapidly. The first set of molds may be removed and reset, to be filled while the last ones are setting and so on.

There is no doubt that the solid bed of concrete construction is cheaper in the end. The first cost alone is less than that of the raised bench, but the great saving is in the durability. As good, and in many cases better stock is raised on the beds and this fact is asserting itself more every season.

The Propagation of Carnations

In the propagation of Carnations every grower of good stock is interested, and while each has his own method a few suggestions are here presented to those who may have heretofore failed, either from lack of knowledge or from too great enthusiasm to get all they could, regardless of who suffers through buying inferior stock.

Many of the large firms which make a specialty of supplying rooted Carnation cuttings to the trade have long since concluded that the best stock is none too good for distribution. For that reason the necessity for ideal conditions has been met, and especially prepared propagating houses are now often seen in well-equipped establishments. But so many florists are easily satisfied with their own propagated stock that so long as the cuttings have a root they are potted or transplanted, regardless of the advisability of growing on poor weakly things, as is plainly in evidence when walking through the rows of plants in the fields or garden spots of many commercial florists, and as was my experience in my travels the past season. This, of course, does not apply to all, but the evidence was sufficiently plain in so many instances as to call forth remarks at the time, with the invariable answer: "Well, they will do for somebody."

Somebody then, other than the propagator or distributor has to suffer and to this reason can so much dissatisfaction be traced by those who have recourse to buying a few hundred plants every Fall. Seldom is it that orders for plants are placed with the same firm two years in succession—I write in a general way—for "once bit, twice shy" is a maxim well observed.

A florist doing a general retail business, and one calling for a display of Carnation blooms all the time in his greenhouses, will often propagate the weakest and sickliest side shoots or "grass" in an effort to save his flowering shoots for future blooms. Small wonder is it then that his stock gives out in a year or so, and he must purchase new stock, meantime bemoaning the loss of a bread and butter variety. Of course, varieties give out, but how much of this giving out can be attributed to careless propagation? Many firms are today carrying stocks of older varieties in preference to the new arrivals solely because they find that by careful selection of stock to propagate from they are the better repaid by the continuance of a known paying variety.

It is absolutely impossible for growers to keep up a regular supply of cut flowers if all available growth is taken for propagation; therefore, select your varieties, and only choose those plants that have not been highly fed, and forced into soft sappy growth; set these apart for purely stock raising purposes, leaving the other plants to supply you with cut flowers, even if you do have to buy a few once in a while. If growing for your own use, choose such time for making cuttings as best suits your convenience; but the consensus of opinion among the larger growers is that cuttings "struck" in late January and February make the best plants, as at that time of year they may be grown right on without any check in the growth. This produces better stock than that rooted in November or December, for the reason that the general florist has his hands full with the holiday business, and stock for the next year must of necessity be neglected until such time as opportunity presents itself to care for it; meantime the cuttings are becoming more starved, and right here is where a deal of mischief is done.

finished with each batch water thoroughly, and protect it from sunlight, each day; heavy waterings will not be necessary for quite a few days afterward, this, however, depending a good deal on location and amount of heat from the pipes under the propagating bed. If a steady temperature of 60° can be maintained in the sand, and about 45° to 50° in the greenhouse, the cuttings should root in from 20 to 30 days. Attention to light syringing, avoidance of drafts, plenty of fresh air, etc., must be given, and if these instructions are carried out, and a little practical sense added, a percentage of 90 to 95 will result. Some varieties root quicker than others, so that the assistant doing the work will have to use good judgment, making necessary notes for future reference. A word as to the necessity of potting cuttings as soon as roots are formed and the discarding of those unrooted—that is, do not put them back in the sand—should close these few remarks.

A. H. S.

The Chicago Carnation Company

As to whether the Carnation leads the Rose in commercial importance as a florist's flower under glass or not would say this is a rather broad subject, and one that requires considerable studying before arriving at an accurate conclusion, but if conventions and exhibitions are to be considered, you will always find there are more Carnation growers in competition than Rose growers, which goes to show that the Carnation is of far more importance to a larger number of growers than the Rose; we have no doubt, however, but that there is more money invested in the growing of Roses than in any other flower cultivated under glass. The subject is far too broad to enter into any details for publication at present writing.

Regarding our new varieties, we take pleasure in sending you some photographs of our new Carnations; some that were introduced last year, and one of our new acquisition, "Washington," a Lawson colored sport of Enchantress, which we recently purchased from Henry Eichholz, Waynesboro, Pa. We intend to disseminate this next season and have already begun to book orders. As the variety is a sport from such a well-known family as Enchantress, it needs no introduction, except, perhaps, a little explanation regarding its color, which will be of interest to most florists. The color is a cerise, the same shade as Mrs. Lawson, which has always been and we believe always will be a popular shade. There are many of the so-called dark pinks or cerise in the market at the present time, but we have yet to find one that is as satisfactory all around for exhibition and commercial purposes as "Washington." As it comes from a race of which we doubt whether there is a florist growing Carnations who does not have one or all of the (Enchantress) family growing on his place, we are sure they will welcome this new addition to such a valuable line.

Conquest is one of the best varieties of its type since the days of Prosperity, as it seems to possess all the good points of that grand variety, together with its exceptionally free blooming qualities, stiff stem, and its beautiful color, which is a light flesh pink as a background, overlaid with a deep rose pink extending clear through the petals, making a most valuable Carnation for any one to grow.

English Room—Fort Pitt Hotel, Pittsburgh, Pa.

J. W. Ludwig

Decoration Committee Pittsburgh Florists' Club

Sangamo is, without a doubt, the most prolific Carnation of any variety we have ever seen growing, and it surprises every one at the rapid growth it makes. It comes into crop exceptionally early and so continues heavily throughout the entire season, and the cut increases as the season advances. At all times of the season it shows an unusually heavy crop of flowers and buds, which develop rapidly, and the color is the nearest the true pink, a little brighter than Winona. The variety has always held its own on the exhibition table, and is the "best money maker" for any florist to grow when you figure the net returns per square foot bench space with any other variety, as it is perfect in every way, especially the stem, calyx, form and color, and is a most excellent keeper.

Mary Tolman has an exceptionally beautiful color, being a deep flesh pink, with just a little trace of salmon, which keeps it from fading in the brightest light. It makes a very clean, upright growth, and gives you large and nicely formed flowers on rigid stems 24 to 30 in. long.

Alvina, a variety that was introduced by Mr. Eichholz last season as a pot Carnation, has proved to be one of the best varieties as a cut flower, as it is exceptionally productive, giving you nicely formed flowers on stiff stems.

May Day is an exceptionally beautiful shade of flesh pink, just a little deeper than Enchantress. It comes into crop very early, and so continues throughout the season. It makes very little grass, every shoot making a flowering

stem, which develops a fine flower in an exceedingly short time.

Among the standard varieties we grow, in addition to the above, is White Enchantress, which is our principal variety in this color. We have the true stock of the pure white, which has never shown any trace of pink and has never known defeat on the exhibition table. White Perfection is the only other white we grow in this color. In scarlet, we find it a hard matter to decide which of the two is the better, Beacon or Victory. In corise, we still keep Aristocrat at the head of the list, and also find Afterglow to be a good one of this color. Under light shades of pink, we grow Winsor, Rose Pink Enchantress and a few Winona. In flesh pink, besides May Day, we think a great deal of Pink Delight. Although we were not able to get large plants of this variety in the field by planting-in-time, still it has produced as well as other varieties on our place and the flowers are exceptionally fine, with a stem long and stiff enough to hold the flower gracefully. We will grow it quite heavily next year as one of the leading varieties in this color. We still continue growing the old favorite variety Enchantress and Melody, or Daybreak Lawson, with a few royal purple Gov. Deneen. This completes the list of the varieties which we are growing.

Joliet, Ill.

CHICAGO CARNATION CO.

Two New Carnations

Bon Ami and Granite State

Bon Ami and Granite State are two new Carnation seedlings, the result of crossing Queen upon Lady Bountiful in the year 1905, by George E. Buxton of Nashua,

E. C. Ludwig

We have great pleasure in presenting the picture of Mr. E. C. Ludwig, a leading florist of the North Side of Pittsburgh, a member of the Finance Committee of the Pittsburgh Florists' Club and a gentleman who has worked very hard for the success of the A. C. S. Convention.

Powers, a Nashua florist, in perfect condition for eight days, having been left there for exhibition after being photographed.

Granite State will be disseminated in 1911.

Carnation Alvina

This Carnation novelty of last year is reported to have made good with most growers as a cut flower. Those who potted up some of the largest plants found it a profitable Christmas seller, retailing at from 75c. to \$1.50 each. The introducer, upon inquiry, gives the following advice: "To get Alvina into good flower for Christmas sales, leave plants in field until end of September, then transfer into a 6" to 8" pot, put into a frame you are able to cover with sash, to start them off, and after your early Chrysanthemums are cut, set the plants of Alvina on the benches and you will have an after crop that will realize more than twice the money the Chrysanthemums brought at Christmas time."

Carnation Granite State

Geo. E. Buxton, Nashua, N. H., disseminator.

Bench of Carnation Granite State

Photographed Dec. 25, 1909.

Geo. E. Buxton, Nashua, N. H., disseminator.

N. H. Both are white in color but of entirely different habit. Bon Ami in habit is quite similar to White Perfection, but makes a much better plant in the field. It has always been the first to come into bloom, bearing a very heavy crop of first-class flowers about the middle of October and continuing throughout the season with a crop equal to any of the commercial white varieties of today. Its blooms are of good size, being on an average 3 inches in diameter with many flowers, and when at its best $3\frac{1}{2}$ inches in diameter. The stems are long and very stiff, holding the bloom perfectly erect, and in length Dec. 1 run 24 inches. The percentage of split blooms is so slight that the variety is called a non-splitter. Having given this Carnation a four years' test and believing it will prove itself a good friend to all who may try it, Mr. Buxton will send it out in limited number, commencing about February 1.

Granite State, although the result of the same cross as Bon Ami, was not from the same seed pod. The habit of growth is all that the critical grower could ask for. When housed in August the plants are in appearance very much like the grand old variety Win. Scott. The stems are of extra length and hold the flowers in a graceful, upright manner. The blooms are of good size, being from 3 to $3\frac{1}{2}$ inches in diameter. From Dec. 1 to July 1 stems 30 inches in length are easily cut without entering the hard wood. In Granite State Mr. Buxton thinks he has the "bread and butter" Carnation. For freedom of bloom, size of flowers, health and habit of growth, with practically no split calyxes, he sees no reason why this Carnation should not fill the long felt want for a good commercial white.

Of the keeping qualities of these two new Carnations nothing can be more convincing than the statement of Mr. Buxton that the flowers appearing in the photograph, here presented, and in another to appear in our next issue, were kept in a store window of W. W.

Horticultural Society of New York

A regular monthly meeting of this Society was held at the American Museum of Natural History, on Wednesday, January 12, 1910. Seven medals, four silver and three bronze, were ready for presentation by the president.

On March 16 to 18 the American Rose Society is to give an exhibition, in conjunction with this Society and under its auspices, at the American Museum of Natural History. The American Rose Society has already issued an extensive schedule for this occasion, and the Horticultural Society of New York has authorized its exhibition committee to prepare a schedule providing premiums for other plants. Excellent facilities are offered at the Museum for conducting a large exhibition, as was clearly manifested by the success of the exhibition given there last Autumn by this Society, which was attended by over thirty thousand people. There is abundant room, so that all may feel free to display their exhibits to the best advantage.

Orchid Section's First Meeting

The Orchid Section of the Society, recently established, holds its first meeting at the Museum on Wednesday, Jan. 26, at 8 p.m.; this meeting will be largely devoted to organization. It is hoped that this section may become the focal point about which the Orchid interest in the vicinity of New York may center. The meetings occur on the fourth Wednesday of each month, and all Orchid lovers are invited to attend them. Lectures and talks will be given and discussions encouraged, and all are invited to bring to the meetings interesting plants or flowers. The desire is to make all feel at home and free to ask questions and exchange ideas. Facilities are available for the display of plants or flowers, and it is possible to hold small exhibitions in connection with the meetings. If all interested will lend their encouragement by attending and taking an active part in the proceedings, the cause will be rapidly advanced.

The Lecture

At the conclusion of the presentation of medals referred to above, the lecture announced for the day, "Winter Decorative Shrubs," was given by Secretary George V. Nash, who illustrated his remarks with lantern slides and specimens. The following is an abstract of this lecture:

People are inclined to think that when Winter comes all is over in the line of decorative shrubs, but this is far from true. Each season has its shrubs. Forsythias and Spiraeas in April and May; Roses and Rhododendrons in June, with others for July and August; and then the gorgeous tints of our Autumn foliage. Winter, too, has its charming shrubs, and while not as numerous as for the rest of the year they are perhaps even more attractive, for they come at a time when all is grey and bleak, and when every little thing that brings to memory the greenness and brightness of Summer is welcome. These Winter shrubs, of course, cannot attract by their flowers, but there are other features which make them a delight to the eye, and these must be sought in the color of the bark, the beauty of the evergreen foliage, or in the brightness of their persistent fruit.

As examples of the first group in which the color of the bark is the attractive feature, *Kerria Japonica*, with its bright green twigs, was referred to, *Cornus alba* Sibirica and *Cornus stolonifera*, both with dark red bark, and the yellow-stemmed form of the latter, known as the variety *flaviramea*. This variety is of a bright yellow and seems to carry a bit of the sunshine into the snowbanks.

The plants with evergreen foliage comprise two groups, those known as conifers and the others as broad-leaved evergreens. The dwarf forms of *Retinisporas*, Cedars, Pines, and *Thujas* are admirable subjects for Winter decoration, being especially attractive when snow-laden. *Rhododendrons*, *Mahonias*, *Leucothoe Catesbaei*, and especially *Ilex crenata*, with its thick dark green leaves and graceful habit, were cited as examples of desirable broad-leaved evergreens.

Among the shrubs desirable on account of their persistent fruit were: *Aronia arbutifolia*, commonly known as *Pyrus arbutifolia*; *Rosa multiflora*, with its myriads of red fruits; *Ilex opaca*, attractive also for its foliage, in addition to its bright red berries; *Ilex verticillata*, and its Japanese relative, *Ilex serrata*, both with red fruit; *Symphoricarpos vulgaris*, the Coral-berry, festooned with thousands of dark red berries which persist until nearly Spring time; and last, but not least, the Japanese *Berberis*, *Berberis Thunbergii*, which, if one were restricted to a single shrub, was perhaps best of all, possessing attractive features at all seasons of the year; yellow with its flowers in the early part of the season; clothed in an attractive green during the Summer; decorative during the Fall with its charming mantle of color; and then its chief charm reserved for the Winter months, when all is cold and grey, its bright red berries, borne in great profusion and retaining their color and plumpness until late in the Spring, adding a glow of warmth to the bleakness around.

The speaker then exhibited specimens of about two dozen decorative shrubs which he had gathered that morning in the grounds of the New York Botanical Garden,

these impressing upon those present the beauties of many Winter shrubs.

At the close of the lecture, Mr. Wood entertained those present with an account of some of his own experiences with decorative shrubs for Winter, and described some of the interesting gardens he had visited in various parts of this country. He remarked especially upon the beauty of coloring of the foliage of the *Mahonia*, and advocated growing it in large masses to get the best results. He also commended highly the Japanese *Berberis*, prizing particularly its bright color which held undiminished until late in the Spring.

Phloxes in the West

Notes from the Horticultural Experiment Station, York, Neb.

Phloxes take a high rank on account of their remarkable beauty, continuous blooming from June until November, and because of the ease of their propagation and culture.

We found we could not depend on many of the imported ones in the trying climate of the West. Some cannot endure the drought and heat; others will rust and blight in wet weather, and many do not find the soil congenial. Said a florist from the East: "You ought to send down and get the kinds we grow." We showed him the identical kinds, but he could hardly recognize them, soil and climate affect them so much.

For years we have been building up a new race. We want: 1. A plant of great vigor to resist the heat and endure the wet weather. 2. Many of the imported ones are very slow propagators and therefore unprofitable. 3. We must have fine individual flowers to blend in one large symmetrical head. 4. We want continual bloomers. 5. A plant should seed well. Many kinds do not seed and others have only abortive pods like many *Ponies*.

This matter of seed bearing is very important, for there is a great future for Phloxes. We are raising thousands from well-bred seeds, most of which will compare well with imported varieties. Among the thousands are some that score the five points of excellence.

New Varieties

To avoid confusion, we name our new creations from the goddesses and heroines of ancient history. *Arete* is a cross between *Crepuscula* and *Richard Wallace*. It has a large symmetrical head, and florets of a large size, white as snow in warm weather and tinged with lavender late in the Fall, and having a crimson eye. The plant is a strong one and a continuous bloomer from June until November. It also understands the multiplication table.

Born at the same time we have *Alcyone*. This, I think, is the most beautiful Phlox on earth. Immense florets of snowy white and in the center five little brilliant stars, artistically arranged. But with the same treatment I got but 20 *Alcyone* and 600 *Arete*. I consider the latter one of the most profitable of all.

York, Neb.

C. S. HARRISON.

Lord & Burnham Co.'s Philadelphia Office

The Philadelphia office of this well-known company has been in charge of D. T. Connor for the past few years, and the many contracts secured from this office, speak well for the popularity of its manager. In the office is on exhibition a full-size Burnham sectional boiler, showing all the new and up-to-date improvements; hothead sash; samples of all kinds of fittings, including boiler ventilator and general greenhouse building necessities; and many sets of plans, whereby the novice, as well as the old experienced greenhouse man, can see at a glance the benefits derived from using Lord & Burnham construction. These plans are very descriptive, even to the smallest detail, and convey to the fullest extent the ideas embodied in L. & B. construction, the durability of which has been the standard upon which the firm has built its extensive business. Telephone connections with all parts of the State have proved very beneficial where hurry orders are wanted, the necessity of which was proved while the writer was in the office, a long distance call referring to the installing of a new boiler (the old one having a serious crack), from a prominent grower, being just then received, the boiler having reached the grower five days after ordering, thus showing the facility with which this concern can handle orders of any size, the smallest receiving as much consideration as the largest. The styles of boilers handled by the company, number 87, all suitable for greenhouse work, from the one piece round water boiler with a record for its economy and fire keeping qualities to the largest sectional steam or hot water boiler, which has proved very satisfactory under the most trying conditions, and which can be operated at a saving by being built to burn pea and other grades of cheap coal. The wood used in the construction of the hothead sash and frames is of the best selected red Gulf Cypress, for which purpose no better material is known. Thousands of these sash and frames have been sold, and the ease with which they are handled by growers, coupled with the durability, etc., make them especially valued.

Among the fittings, the ventilating apparatus is interesting, its many new and interesting features making it very desirable for florists' use. It includes such improvements as self-oiling gear, the compact standard side ventilation gear—these being constructed so as to allow of no projections beyond the heating pipes into the walks—and the standard and column gears, built specially for pipe frame or semi-iron houses, and fastened to a pipe column for support, to relieve the roof of any unnecessary weight, advantages which can be readily seen. Clamp pipe hooks, swinging pipe hangers designed to carry several steam pipes, and automatic air headers are other fittings used by this house in construction of up-to-date greenhouses.

Mr. Connor is to be congratulated on his success in securing many contracts from prominent growers, among which may be mentioned the recent buildings at Norwood, Pa., for the Roht, Craig Co. of Philadelphia, Pa.; a fine Palm and show house for the League Island Navy Yard; two houses for Mr. Weiss of Halthoro, Pa., and others, beside many orders for boilers and bench fittings secured through the unquestionable familiarity that Mr. Connor has with the necessities of a greenhouse man. The office is located in the Heed Building, Filbert st., Philadelphia, and is within easy access of all railroads and car lines, being central, and perhaps an ideal location for such a business.

A. H. S.

St. Louis Florists' Ladies Organize

Miss Matilda Meinhardt, who is president of the Ladies' Society of the S. A. F., made a call for a meeting of the ladies, which was held at the Washington Hotel, Monday, January 10, at 2 o'clock. The object of the meeting was to organize a ladies' home circle to which only S. A. F. ladies can belong. A few ladies met, a month ago, at the home of Mrs. John Steidel in St. Louis County, where the organization was first talked over which caused the call for this assemblage. Those present at the Washington were Miss M. Meinhardt, Mrs. J. J. Bencke, Miss O. G. Koenig, Mrs. Theo. Miller, Mrs. F. C. Weber, Miss J. Meinhardt, Mrs. F. H. Meinhardt, Mrs. Geo. B. Windler, Mrs. Carl Beyer, Mrs. H. G. Berning, Mrs. Kuehn and Mrs. John Steidel. The election of officers took place at once and resulted in the election of Mrs. John Steidel as president, and Miss M. Meinhardt secretary and treasurer. It was then stated that the object of the circle was to meet once a month. All members must belong to the Ladies' S. A. F., and to promote its interest each month one of the members will read a paper on something interesting to the ladies. For the next meeting, by a vote, the first lady to read a paper will be Mrs. J. J. Bencke. The circle will also entertain all visiting lady florists during their stay. After a few remarks from each of the ladies the meeting adjourned. Coffee and ice cream were served after adjournment. The secretary will send out notices of the date and place of the next meeting, in February.

ST. PATRICK.

The New England Dahlia Society

The annual meeting of the New England Dahlia Society took place at Boston, Wednesday evening, Jan. 12, and the following officers were elected:

President Henry W. Kendal, Newton, Mass.; vice-president, E. B. Gill, Medford, Mass.; sec'y, Loring M. Bates, W. Bridgewater, Mass.; treasurer, Wilbur D. Moon, Lynn, Mass. Executive Committee—C. N. Bacon, B. Boston, Mass.; J. F. Flint, Salem, Mass.; Geo. Rawson, Newton, Mass.; N. A. Lindsey, Marblehead, Mass.; T. H. Tyndale, Boston, Mass.

The meeting was attended by fifty members, and among the visitors we had Mr. Beaulieu of Woodhaven, L. I. and Mr. Arthur Barry, Ossining, N. Y.

MAURICE FULD, Ex-Sec'y.

Attempts to split the New England Dahlia Society came to an end at the annual meeting of the Society, when the "Insurgents," after an effort to drive them out, were taken into camp, horse, foot and dragoons. In September, 1908, H. F. Burt, who had held the presidency of the Society since 1906, was defeated for re-election by William F. Turner of New Bedford, after which it was voted to incorporate the Society, and in the following December a charter was secured.

Under a claim that the meeting of the old Society was not duly dissolved, Mr. Burt and a few other pronounced the new corporation illegal and as having no right to the Society's name. They elected themselves officers of the real and only New England Dahlia Society, one to each office, and issued a paper called the *Dahlia News*, copied after the official organ of the Society. This did not prevent them from attending the recent meeting of the Society, however, where E. F. Gill of Medford moved the expulsion of Mr. Burt. The head of the "insurgents" made a vigorous defence, and the matter was referred to the Executive Committee.

F. E.—Best Advertising Medium

Florists in good standing throughout the country can avail themselves of the advertisers' offers in this Department and accept, without hesitation, orders from their local customers, transmit same to an advertiser in these columns, and thus avail themselves of the opportunities for extension of trade which are open to all. Let your customers know you fill orders by telegraph to any part of the country.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail firms advertising under this heading are all considered by the publishers of The Florists' Exchange as being responsible, and will accept and fill orders for Flowers, Plants and Floral Designs for Steamer Orders, departing Trains, or any given point within their reach, forwarded them by mail, telegraph or telephone, in the respective districts to which their trade extends, the usual commission being allowed. While no guarantee is expressed or implied by this paper as to the satisfactory fulfillment of orders sent to parties whose names appear in this Directory, we will state that only concerns of known good standing will be admitted in this Department. The use of Arnold's Telegraph Code No. 16, a copy of which is placed in the hands of every advertiser, will greatly facilitate this interchange of business.

Eyres ALBANY, N. Y. 11 North Pearl Street

Cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Atlanta Floral Co. ATLANTA, GEORGIA 41 Peachtree Street

We cover all of Georgia and are within easy reach of New Orleans, Jacksonville, Birmingham, Chattanooga and Charleston. Retail orders placed with us will receive careful attention.

Thos. F. Galvin BOSTON, MASS. 124 Tremont Street

We cover all New England points. Retail orders placed with us receive careful attention. The delivery of flowers and plants to Boston sailing steamers a specialty.

J. Newman & Sons BOSTON, MASS. Corporation 24 Tremont Street

Orders by wire receive prompt and careful execution. We can refer to leading florists in all principal cities. Established 1870.

Robt. S. Wilson BROOKLYN, N. Y. Fullon St. and Greene Ave

Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders cared for from all parts of the country and delivered at Theatre, Hotel, Steamer or Residence. Tel.: Prospect 2840 and 4065.

Palmer's Flowers of Quality BUFFALO, N. Y. W. J. PALMER & SON, 304 Main St.

Hauswirth CHICAGO, ILL. The Auditorium Florist, 232 Michigan Ave.

The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

JULIUS BAER, CINCINNATI, O. Fourth St.

Frank F. Crump COLORADO SPRINGS, COLO. Retail Florist

Telegraphic orders will be carefully and promptly filled; personal attention given. Usual discounts allowed.

W. S. Matthews DAYTON, OHIO Florist, 16 West Third Street

Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

The Clark Floral Co. DENVER, COLORADO 1706 Broadway

J. A. VALENTINE, Prest. Orders by wire or mail carefully filled; usual discounts allowed. COLORADO, UTAH, WESTERN NEBRASKA and WYOMING points reached by express.

John Brattmeyer's Sons DETROIT, MICH. Broadway and Gratiot Ave.

We cover all MICHIGAN points and large sections of OHIO, INDIANA and CANADA. Retail orders placed with us will receive careful attention.

Art and Its Study

Where, in all creation, is the opportunity for the development of art and beauty more abundantly placed at the disposal of man than with us, as florists, where Nature at her best surrounds us with unlimited suggestions? It may be asked, how shall we take advantage of the opportunities afforded us, or where and how can we benefit by them?

In the answers to these questions lies the secret of practical creation in design. We have all met the man who, unfortunately for himself, looks only to his own resources, for his further development, as he believes wholly in his ability to create original works.

Who of us would declare himself to be original in his work? None would dare, then why be false to ourselves? Very little result may be hoped for from such a mind, and its salvation, in an artistic sense, depends on the chance that it may so broaden in view as to be able to see and appreciate good in the works of his fellow men.

To gain the most of this world's good we must remain earnest scholars, with the world as our teacher. Let us consider that great artist, Michael Angelo, acknowledged to have been bestowed with priceless gifts of feeling for the beautiful, and aim to become also highly accomplished in our sphere. Let us take the lesson given to us by this great man in his painting of "The Last Supper," a subject that still remains among the world's greatest pieces of art. Here we discern the creation of a great mind; instead of wasting time in trying for something not yet conceived he wisely puts his gifts into a work worth while; his one desire was to reproduce the original scene as nearly as his imagination and belief could follow.

Throughout the works of this great teacher we can clearly see his aim was to reproduce; and, by the proper touches, he succeeded so perfectly that the individuality of his work gave him fame.

Standing Wreath, composed of Roses, Lily of the Valley, Violets, Chrysanthemums, Maidenhair Fern and Asparagus

By W. J. Palmer & Sons, Buffalo, N. Y.

Bertermann Bros. INDIANAPOLIS, IND. 241 Massachusetts Ave.

Prompt and efficient service rendered points in Illinois, Ohio and Indiana. Bertermann's flowers excel.

Jacksonville Floral Co. JACKSONVILLE, FLA. 20 Laura St.

We cover all Florida—St. Augustine, Palm Beach, Miami, Tampa, etc.; also lower Georgia. Choice seasonal flowers always on hand.

Samuel Murray KANSAS CITY, MO. 1017 Broadway

I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers on hand. Wire me your orders.

Jacob Schulz LOUISVILLE, KY. 644 Fourth Avenue

Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of flowers always in stock; delivery facilities perfect.

Hall & Robinson MONTREAL, CANADA 855 St. Catherine St., West

We can fill all orders for cut flowers, designs, etc., and can ship to any city as far as Halifax to the East and Windsor, Ont., in the West.

Young & Nugent NEW YORK 42 West 28th Street

Sievers Floral Company 70 Geary Street SAN FRANCISCO, CAL.

"Cholcest of Flowers Always on Hand."

The poet often finds inspirations for his verse from some suggestive picture; while, in return, great painters have found food for work in the lines of the poet. In the schools of art a student is taught to cultivate his taste in the study of works of past great men. The instruction given is to copy, as closely as possible, the lines, colors, and expressions, that they may be instilled in his mind and later make it possible for him also to do well with his own selected subjects from the lessons so learned.

Does not this suggest to us that to note closely pictures of flowers might often result in some good ideas; or that to read a book bearing upon art, would at least be a healthy pastime.

To become a floral artist it is not necessary that we should know how to draw a flower, or how to paint it; neither is it necessary that we should know how paints are mixed. The artist in the schools spends years in acquiring these principles, and then finds himself unable to get a very large variety of flowers to study with as the price is too great an item. Now, we florists need but study graceful lines and the blending of color and, having the material with which to work, can produce pictures that the artist cannot paint. In short, Nature gives us the color and the variety and the rest lies with ourselves.

FRED K. LEARY.

A HEARTY INVITATION

While the Carnation is up for its An-
 nual Review we would esteem it a
 favor to hear from those who grow the
 plants. Send in notes on your experi-
 ence with Carnations in 1909; together
 with any suggestions or criticisms you
 may have to offer. Do it now. Don't
 wait.

Purchasers of stock from advts.
 in these columns will confer a fa-
 vor by making this statement in
 their order: Saw your advt. in
 the EXCHANGE.

Springfield, O.

The Springfield Florists' Club held a
 social session on the evening of Jan.
 10, to which every florist in this vicinity
 not a member of the Club was invited
 as a guest.

The affair was a most enjoyable and
 profitable one for all present. Tables
 were set in the packing house of the
 Highland Floral Co., handsomely de-
 corated with potted plants by the members
 of that progressive firm, and heavily
 loaded with all the good things that go
 to make up a square meal for a hungry
 man.

Dinner was announced at 6.30 and
 about 35 members and guests "drew up
 and fell to," giving hearty approval to
 the menu designed and served by the
 Club's excellent standing committee on
 refreshments.

After the tables were cleared and
 cigars passed, opportunity was given for
 expression of views, more especially
 those concerning the interests of the
 local florists, and some points were
 brought out from which good results are
 expected.

The contemplated flower exhibition to
 be held in this city next Fall came in for
 full share of discussion; we are all in-
 tensely interested in this matter and a
 creditable showing will undoubtedly be
 made when the time comes.

The Schmidt & Botley Co. have just
 completed a commodious cold storage
 house and will be in fine shape to care
 for their large bulk of dormant stock.

The Fairview Floral Co., under its
 new management, has issued a handsome
 100-page catalog with lithographed cover
 and will make a strong bid for a share
 of Spring business.

Club President Murphey and John M.
 Good are both confined to their homes
 with illness and have the sincere wish
 to all for speedy recovery.

Ed. George of Painesville, O. and C.
 Etscher of Canal Dover, O. were recent
 visitors. M.

Retail Notes

DAYTON, O.—Mr. and Mrs. Warren G. Matthews entertained a number of the employees of the Matthews Florist Co. at a banquet at the Atlas Hotel, on Jan. 12.

SOUTH BEND, IND.—The store of the South Bend Floral Co. and the green-houses have been sold, under the receivership, to Albert and Charles Kinyon, florists—\$10,000 was the price paid.

ELKHART, IND.—W. J. Troyer, the retail florist, who now has quarters in Brusman & Holdeman's office, will shortly move into the building to be vacated by Helfrick's, the clothiers.

HARTFORD, CONN.—The florists are greatly concerned over the resurrection of the old Pilgrim Blue Laws of 1702, under which it is sought to compel the closing of all places of business except such as might open on the plea of "mercy or necessity." Sunday, Jan. 16, was the first "blue" day.

JERSEY CITY, N. J.—Wm. G. Elliott reports holiday business as good as that of last year, principally in plants. His rush all came in the last three days.

BUFFALO, N. Y.—Edgar J. Spiess has opened a new florist store at 211 Genesee st.

STONEHAM, MASS.—James H. Delay, a florist, has filed a petition in bankruptcy. Liabilities are \$3590; assets uncertain.

Pittsfield, Mass.

A flower store, to be known as "The Flower Shop," will be opened in the new Agricultural National Bank Building, about Feb. 1. Robert L. Smith of The Wallace Co. of Schenectady, N. Y., and Stanley G. Barnes, who has been with Chas. Limmer in the same city, are opening the store. Mr. Barnes will have charge for the present and until it is all well regulated. The store has been fitted up in a most artistic manner and the furnishings are neat and well arranged. A good trade is anticipated as The Flower Shop intends to carry only first quality goods in every respect, as this grade of stock will likely be appreciated in this city. B. F. S.

Hartford, Conn.

Business the past week has been below the average, very few social functions having taken place and not as much funeral work done as usual. The heavy snowstorm of Friday and Saturday kept people from getting out which lessened the sales for these two days considerably.

There is a good supply of all kinds of flowers, excepting Carnations. The retail prices are as follows. Roses \$1.50 and \$2 per dozen. Carnations 75c. per dozen. Violets \$1.50 per 100; Paper Whites and Romans 50c. per dozen; and Sweet Peas \$2 per 100.

Stephen Green of H. Payersdorfer & Co., Philadelphia, and Robt. Greenlaw of N. F. McCarthy & Co., Boston, were callers this week.

A boiler in the Palm house of John Coombs sprung a leak last Wednesday night; all the Palms were removed to an adjoining house, so that none of them were frozen. A new boiler has been installed. J. F. COOMBS.

Albany, N. Y.

The Albany Florists' Club held its annual banquet on Thursday evening, Jan. 13, at the New Kenmore Hotel. About 40 members were present. The banquet tables were decorated with vases of Roses, Carnations, Mignonette and Narcissus, sent by the members, and the room was well decorated with Palms, Ferns, etc. There was a fine menu and everyone present seemed to enjoy it to their hearts' content. After the dinner, the toastmaster, Pres. F. Goldring, called on the different members present for toasts, which were responded to by the different guests. Among them was the genial member, J. H. Snyder of Rhinebeck, N. Y., who is always ready and willing. His toast was "The Pine Knot." Other out-of-town guests were J. Sambrook, Berlin, N. Y., and Hlenkes Bros. Newtonville, N. Y.

Chas. Sanders of H. G. Eyres' has recovered from his sickness and is well enough to be around again. Visitors: Mr. Roney of Henry S. Michell Co., Philadelphia. W. C. K.

The Spineless Cactus

How Misstatements Go Down to
Posterity

The dispute that followed the announcement that Luther Burbank had created a spineless Cactus is renewed with the advent of the new State school textbook on geography. Hugo H. Liffenthal, the Berkeley (Cal.) horticulturist and president of the Juvenile Hort. Society of America, in a letter to the State Department of Public Instruction, replying to George L. Sackett, secretary of the State Textbook Committee, who defended the textbook, points out that Burbank admits that he did not originate the spineless Cactus, but simply improved it, while, in the new textbook, Burbank is credited with the spineless Cactus shown in picture illustration and no definite variety or species of Cactus is mentioned.

Our National Forests

Prof. Henry Solon Graves, the new Forester of the United States, begins his term of service Feb. 1. He was born in Marietta, Ohio, May 3, 1871, has been director of the Yale Forest School since 1900, and is a warm personal friend of Mr. Gifford Pinchot.

In speaking of the forest service, Professor Graves stated that the United States forest service has been built up from a very small division of the Department of Agriculture, with an annual appropriation of \$25,000, to a sizable bureau with an annual appropriation of about \$400,000. At the present time there are 195,000,000 acres in charge of the forester, comprising 27,000,000 acres in Alaska and Porto Rico, and it is the duty of the forester to administer these public lands along lines of conservation and according to the rules of scientific forestry. This work includes the protection of the forests, the cutting of mature timber so that the forests will continue to yield and be perpetuated, the building of roads through the forests and the selling of timber.

During the year 1908 there were cut from the national forests 400,000,000 feet board measure of lumber.

A large business has also grown up on the forest lands in the use of them for grazing purposes, where grass grows between the trees. In 1908 there were over a million cattle and horses grazing under proper regulations on the forest land and there were also 7,000,000 goats. There are 150 different forests in the United States and there are 1500 men in charge of them.

The work of the forest service is gradually growing and it is becoming recognized as being one of the most important business interests of the country.

The service is also engaged in the study of tree growth, the best ways to cut and plant trees, and the encouragement of the State forestry departments similar to that in Connecticut.

A RECORD TO BE PROUD OF

The Carnation Convention at Pittsburg

The Florists' Exchange issues of January 29, and February 5, will be essentially Carnation Numbers. (See advertisement on editorial page.) Very many of our readers are equally interested with the disseminators in the behavior of all the leading varieties of Carnations on the market, and to these we extend a hearty invitation to send us in for publication a summary of their experience in 1909 and their suggestions for 1910—Write now while the mood is on you.

Please stop my advertisement in the "Exchange," as I am all sold out of Geraniums.

Very truly,
(Name and address on application.)

North Shore Hort. Society

At the regular meeting of this Society, on January 21, C. H. Totty will give a talk on Chrysanthemums. J. W. D.

Dayton (O.) Florists' Club

The Dayton Florists' Club held a meeting at the store of J. F. Young, 87 East Fifth street, Monday night, January 10, when a committee was appointed to arrange for a banquet next month. There was also some talk of a floral show to be held in the city, but nothing definite came of it and the plan will likely be abandoned. The next meeting will be held the first Monday in February.

Florists and Gardeners' Club of R. I.

The Florists and Gardeners' Club of Rhode Island held its thirteenth annual banquet at the Westminster Hotel, Providence, on January 17. The meeting was called to order at 8 o'clock p.m. The brothers present seemed to be ready to eat rather than engage in the business affairs of the Club, and business, therefore, was closed after a short session. After the members, with invited guests, were seated at the table, which was loaded with all the good things of all the cultures that could be devised by the fertile brain of man, with the assistance of the soil and natural conditions, Ex-president Michael Sweeney, in years our oldest member, was introduced as toastmaster for the evening. After a few facetious remarks—original of course—the lid was off. The entertainment was interspersed with vocal and instrumental music, well rendered and enjoyed. Prof. H. J. Wheeler, of Boston College, R. I., spoke at length of different types of vegetation suitable to the New England climate, and proffered the idea that the natural resources of New England had been somewhat neglected compared with some other States. The retiring president was then presented with a gold mounted fountain pen suitably inscribed. Charles W. Macnair responded in a very pleasant manner, his facial expressions giving evidence of his appreciation and pleasure. President-elect Robert Johnston was then introduced as the "master flower," who responded in very fitting words to the pleasant introduction. Mr. Morris, manager of the hotel, gave several impersonations; the one that appealed to the florists might be classed in the category with the "Legend of the Rose" which was apropos.

Only four of the founders of the Club were present: Wm. H. Mason, James E. Canning, Wm. Appleton and Wm. E. Campbell. Every one present had a chance to ventilate himself and no guilty man escaped the eye of Michael. There was a goodly number present and the affair was a success from every standpoint. The tables were decorated by Vice-president Appleton with Palms and cut flowers. The committee in charge were Eugene Appleton, Alex. Macrae, and Harry Clark. Indications of good intentions were displayed, as the secretary was kept busy in receiving money for dues, past and present.

S. F. L.

G. & F. Club of Boston

The regular monthly meeting of the Club was held on Tuesday evening, January 18, with about 15 members, and a number of ladies present. It was installation night and after the opening by president Downs he gracefully handed the gavel to President John W. Duncan, who thanked the members for the honor conferred upon him and said that he had been highly pleased with the work of the Club in the past season, as when he first became a member the usual attendance was about a dozen, as against an average last year of 162. Short addresses were also made by the other officers, excepting Vice-president Miller and Treasurer Hatch, each of whom were on the sick list and unable to be present. Nine new members were elected, and E. H. Wilson, the noted traveler in China, was proposed for honorary membership. Mr. Wilson was the lecturer of the evening and he gave the members a very interesting and instructive talk on the wild country where he had spent so much time, and illustrated his talk with an excellent lot of stereoscopic views.

The president appointed the following committees: Exhibits, J. F. Flood, chairman; W. C. Rust, J. L. Miller, Martin Sullivan, Wm. Sim, Geo. Shields, S. J. Goddard and Albert Bateley; entertainment, P. J. Turley, chairman, C. J. Harvey, W. D. Nickerson, Frank Murray and William McGillivray.

It was announced that at the next meeting, which would be Carnation night, S. J. Goddard would be the lecturer. On the exhibition tables were a lot of fine exhibits, including some splendid Carnations, such as Duke of Finkland and also a fine plant of Lelia anceps alba, for which he was awarded a cultural report of merit. Carnation Shasta from Patten & Co. was awarded a report of merit. This fine white variety is indeed a good one. Carnations Sangamo and Admiration were shown by E. J. Reuter & Son the latter variety showing up fine and receiving the first award of the Club—honorable mention. Littlefield & Wyman showed a white seedling which received honorable mention. Other exhibits were Roses from E. Holmes, Carnations and Freesias from H. A. Stevens, and Freesias from Daniel Whyte. The Club banquet will be held on January 27, and a large attendance is assured.

J. W. DUNCAN.

Massachusetts Horticultural Society

President Wild has appointed J. A. Pettigrew, W. N. Craig and Robert Cameron, members of the local committee of the S. A. F. 1911 National Flower Show. J. W. D.

2 Duane St. New York.

Catalogs Received

DEPOSIT SEED CO., Deposit, N. Y.—General Catalog of Vegetable and Flower Seeds.

FRIEDR. C. POMRENCHE, Altona, Hamburg, Germany.—1910 Price List of Seeds and Bulbs.

W. W. RAWSON & CO., Boston, Mass.—Lettuce, "Description of Rawson's Sweet Pea Culture for 1910."

J. J. FREEMAN CO., 285 Metropolitan ave., Brooklyn, N. Y.—Price List of Insecticides, Fertilizers, Tobacco Specialties, etc.

PERRY'S HARDY PLANT FARM, Enfield, Middlesex, England.—Perry's Special List of Delphiniums; Perry's List of Perennial Seeds; and Special Offer of Japanese Lilies, and other stock.

HENRY S. SEXTON ADAMS, Wellesley, Mass.—Adams' Little Green Book for the Garden. A handy little price list, 24x36 ins., covering the "best" Flower and Vegetable Seeds, Bulbs and Roots for a successful garden. Printed on heavy paper stock and well illustrated.

H. H. BERGER & CO., New York.—Trade Price List for Spring and Summer of 1910, containing a carefully selected list of Summer Flowering Bulbs and Tubers for Spring Planting, a selected list of Flower Seeds, Farm Seeds, Fern spores and a Plant Department.

FORD SEED CO., Ravenna, O.—A 56 page catalog descriptive of "Ford's Sound Seeds." Both Vegetable and Flower Seeds are listed, and among the varieties are several of the company's specialties. The catalog is profusely illustrated, and appears within red covers.

W. ATLEE BURPEE & CO., Philadelphia.—Wholesale Catalog for Seedsmen and Dealers, of "Burpee's Seeds that Grow." This publication is supplementary to the firm's retail catalog recently issued, and contains, beside wholesale prices, a very complete telegraph code. Illustrated.

J. M. THORBURN & CO., 33 Barclay st., New York.—Trade Price List covering Vegetable, Flower, Grass, Tree and Shrub Seeds, Bulbs for Spring Planting, Miscellaneous Bulbs and Roots, Garden and Greenhouse Tools and Supplies. The publication contains 56 pages and is bound in brown paper covers. A handsome embossed color plate showing the new Eschscholtzia Thorburni is sent out with the List.

THE LIVINGSTON SEED CO., Columbus, O.—"Tomato Facts," a handsome little 24 page brochure containing much information of interest to Tomato growers, and incidentally describing the Livingston specialties. The publication is printed on heavy plate paper in purple ink on a buff ground, and appears in covers bearing an excellent design, in four colors, showing Tomato fruit, vines and flowers.

ARTHUR COWEE, Berlin, N. Y.—Gladioli: "The Flower Superb." Not a large catalog, by any means, as these go today; only twenty pages and cover. But the subject is well covered, and the illustrations are of a high order. It is a bright, snappy production, a booklet that will be studied from cover to cover, and this, we take it, is the first consideration in the making of catalogs. Seven pictures interspersed throughout the pages, showing spikes of Blue Jay, Peace, La Luna, Victory and Dawn in their natural colors, a two-page color plate of Cowee's Dollar Collection, and many black and white illustrations all perform their part in enlivening the descriptive matter.

JAMES J. H. GREGORY & SON, Marblehead, Mass.—Catalog for 1910 of "Gregory's Honest Seeds." The publication opens with a greeting by the venerable head of the firm, who mentions that at the age of 82 he is enjoying vigorous health. As in many other seedsmen's catalogs there is a novelty section in this case embracing eight pages. Several floral novelties are described, among them some new double Petunias called the Marvelous; and Colanum Commersonii, a new variety of delicate lavender shade. Besides Vegetable and Flower Seeds, selections of the book are devoted to Summer Flowering Vines, Bulbs and Roots, Shrubs and Plants; Bedding and House Plants, Roses, Small Fruits, Implements, Fertilizers and Garden Requisites. The publication contains 80 pages and appears within red covers, the front page bearing an illustration of a Squash on which is the legend "Gregory's Honest Seeds."

M. BRUNJES & SON, Brooklyn, N. Y.—1910 Catalog of Seeds, Bulbs and Garden Tools. This Brooklyn seed house has been rapidly forcing its way to the front of the seed business and has issued for its patrons, this year of 1910, a thoroughly well compiled and handsome catalog printed in the most modern style, from which it follows that this firm is in splendid position to satisfy an exacting trade. The catalog is quite a large one, consisting of 76 pages and cover, and the contents list a full line of Vegetables and Flowering Seeds, Vegetable Plants and Roots, Flowering Plants, Field Corn, Grass Seeds and Miscellaneous Farm Seeds. Bulbs and Roots for Summer Plants are extensively listed, with insecticides, Fertilizers and Garden and Farm Tools and Sundries are shown in very complete lines. The covers are in green and black and somewhat of a departure from those of other houses. The front cover shows a realistic repro-

duction of Sweet Corn (Long Island Beauty), considered by many as the best of the second early sorts. The back cover design shows a list of "Cool and Crisp" Cucumbers, looking as natural as life. Vegetable Seed Novelties and Specialties occupy four pages at the beginning of the catalog.

JAMES VICK'S SONS, Rochester, N. Y.—Vick's Garden & Floral Guide for 1910.

A 96-page catalog of Vegetable and Flower Seeds, Hardy Plants and Bulbs, Hardy Shrubs, Umbellifers, and other Plants and Bulbs, Small Fruits, Fruit and Ornamental Trees, and Garden Supplies. In the Vegetable section a colored insert carries an announcement of prizes amounting to \$1040 for the best exhibits of eight of the firm's specialties at the New York State Fair. In the Flower Seed section prominence is very naturally given to Asters, among which are several of the firm's own specialties. Vick's Mikado Pink Rochester is the leader, a type which has been selected by the Rochester Board of Trade as the emblematic form for the Aster, as chosen by the Chamber of Commerce to be the city's representative flower. Vick's Comet, Early Snowdrift, Violet King, Rose King and Royal Purple are others prominently featured. Announcement is also made of the distribution of \$200 in prizes at the New York State Fair, for the best exhibits of Asters grown from Vick's Quality Aster seed. The publication appears in covers handsomely lithographed in colors, the front cover bearing representations of Onion specialties, and the rear cover a quartette of Vick Asters.

J. M. THORBURN & CO., New York.—109th Annual Catalog of High Grade Seeds for 1910. The growing tendency to distinctiveness in catalogs is well demonstrated in this particular one, as the author, Thorburn, "baldly" states on its very page. This might be better expressed by a simplified statement, making known the fact that all the distinctive features shown in former catalogs are preserved in this; namely, use of large type, large, distinctive illustrations, with artistic notes prefacing every vegetable and flower seed chapter, and a very careful arrangement pervading the whole. Where all is so well expressed it is hard to comment on any one feature as surpassing another. Pages 4 to 9 describe and list novelties and specialties in vegetable and flower seeds, and in this catalog the general list of flower seeds, giving the time of flowering, hardiness and duration, color of flower, height in feet and general observations, will be found particularly valuable for ready reference. Summer flowering bulbs and roots are listed, and a variety of garden insecticides, high grade fertilizers, tools and implements are given in the closing part of this book of 144 pages. While the front cover is in plain embossed lettering, the back cover shows a most beautiful design, embossed in colors, of an Eschscholtzia Thorburni.

BURNETT BROS., New York.—Seeds, Bulbs and Plants, Spring, 1910. This is an 80-page and cover production, the quality of the work which is fully equal to any catalog which has come to the desk this year. A splendid quality of paper has been used, the illustrations are clean, in plenty and well selected, and the type is large and easily read. This work contains a full selection of best grown Flower Seeds, Farm and Sandy Seeds, Bulbs and Roots, Plants, Tools, Fertilizers and Sundries; everything, in short, that is requisite for the garden. We notice among the novelties a very fine illustration, accompanied with the description of Burnett's new Tomato "Gypsy," described as a wonder fruit and "striking novelty." Burnett's Cabbage "Bass Rock." Burnett's "North Pole" Cucumber and Burnett's Pepper "Monarch." The front cover shows embossed letters in gold on a green background, a simple but nevertheless effective rendering. The back cover is handsome enough to frame a picture of a large, modern country mansion, with hip roof and many gables and chimneys, surrounded at rear and to the right by large shade trees and in the front are grouped small evergreens in close proximity to the dwelling; a noble lawn, the result of the skillful use of Burnett's Special Lawn Grass Seed, gives the finish to a most artistic picture.

BRIDGEMAN'S SEED WAREHOUSE, RICKARDS BROS., Proprietors, New York.—Spring, 1910. The standard of Seed Trade Catalog production continues to be raised several notches each year, and the firms which drop behind in this endeavor are few in number. The catalog under review has attained a decided improvement over its predecessor, good as was that one. Several novelties are shown in the opening pages among which we notice in Cauliflower, Rickards Bros. "Ball of Snow" and "General Crop" in Cucumbers, Rickards Bros. "Invincible" Peas, in Lettuce, Rickards Bros. "New Head," in Mushrooms, Rickards Bros. forcing Mushroom "Elite," in Tomatoes, Rickards Bros. "Extra Early." The body of the catalog is beautifully illustrated with fine halftones, and lists a full line of Vegetable and Farm Seeds, Flower Seeds, Bulbs, Plants and Roots, Implements and Miscellaneous Supplies. The front cover shows in a panel a beautifully colored design of Campanula (Canterbury Bells), forming one of the most effective designs we have yet fal-

len across; it must be seen to be appreciated; the back cover, shows pictures of Rickards Bros. "New Head" Lettuce and Rickards Bros. "Ball of Snow" Cauliflower. The halftone reproductions on this cover are wonderfully faithful and we doubt if it is possible to surpass in any future year the clearness of the detail shown in these two pictures.

JOHN LEWIS CHILDS, Floral Park, N. Y.—Child's Combination Catalog for 1910. A very complete and valuable Seeds, Summer Bulbs, Hardy Bulbs and Plants, House Plants, Shrubs, New Fruits and Dutch or Fall Bulbs. The publication is printed in five sections, each on different colored paper. Four floral novelties, shown in a color plate, are Dimorphic Peas, aurantiaca, Calliopsis radiata, a blue Petunia—Norma, and a new early Linum Perenne. Another color plate shows new Giant Excelsior and other Pansies, and a selection of Spencer Sweet Peas. The new vegetable and flowering plant Hellanti is illustrated and described, and particularly as to its food value given. Considerable prominence is given to Gladioli, which are the specialty of the house. Four new varieties are added to the collection this year, named and introduced for the first time, viz.: Dorothy Burnham, a flower of enormous size, rosy flame color with large pure white throat; Phlox aurantiaca, a new pink; Ivory Spray, a white, beautifully sprayed rose; and Geo. Volmer, dark pink suffused orange, with light yellow rays and throat. The first three are of the Childs type, and the fourth Gandavensis. The catalog contains 152 pages, and like its predecessors, is most profusely illustrated with line cuts. The cover is lithographed, the front page bearing a design representing Pinks, the second page The Wonderberry in fruit—by the way, this plant is in future to be known as the Sunberry—the fourth page the Air Potato or Giant Yam and the fourth Plums, Raspberries and Dewberries.

WM. ELLIOTT & SONS, 42 Vesey St., New York.—Sixty-fifth Annual Catalog of Vegetable and Flower Seeds, etc., a 68-page publication printed on excellent paper and profusely illustrated. The firm's novelties and specialties for 1910 occupy four pages. Antirrhinum majus Ruby is described, a new variety having bright ruby red flowers and tall growth. Brachycome Little Blue Star is a new sort listed as a great improvement on the old variety B. iberidifolia. Cosmidium Burridgeanum var. Orange Crown, ray florets golden yellow with a broad orange-red border of rich orange around the disc, is a new variety introduced. Phlox aurantiaca, the showy South African annual, with its Marguerite-like blossoms of rich orange-gold is well described. Gerbera Jamesoni hybrida, the new race of Gerbera, flowering in many shades of color, is another striking novelty. Shadblow, a new Delphinium; a new carnation flowering Gypsophila; Kosmia tricolorphylla or Summer Cypress; Myosotis Ruth Fischer, a variety suitable for pots as well as for bedding; Orchid-flowered Pansies, a new strain; Ricinus panormitiam, a new hybrid; and new Sweet Williams and Verbenas. The catalog is a fine list of novelties in Vegetables. The general lists of Flower and Vegetable Seeds are very complete, and a number of new and fine half-tone cuts are used in illustrating different varieties. Grasses and Clover Seeds are conveniently enumerated, and considerable space is given to Summer flowering bulbs and roots. A plant department covers Chrysanthemums, Carnations, Roses, Climbing Vines, Flowering Shrubs, Hardy Perennial Plants and Bulbs, Fruit Trees and Small Fruits and there is the usual department for Cultural Requisites and Supplies, Poultry Supplies, Fertilizers and Insecticides. The publication appears in handsome covers printed in colors, the first page showing a suburban residence and garden, and the back page a park scene with bedding.

R. & J. FARQUHAR & CO., 6 & 7 South Market st., Boston, Mass.—Farquhar's 1910 Garden Annual. A handsome and finely illustrated catalog of Vegetable and Flower Seeds, Grasses, Roots, Summer Flowering Bulbs, Bedding Plants, Decorative Plants, Aquatics, Hardy Perennial Plants, Roses, Vines, Ornamental Trees, Conifers, Ornamental and Shade Trees, Fruit Trees and Small Fruits. A list of flower novelties and specialties for 1910, among them being several varieties of Asters; a new bedding Begonia; a new Cosmos, Farquhar's Early-flowering Red; Peony-flowered Dahlias; a new Peony-flowered Pansy; a new introduction from British East Africa, suitable as a pot plant; some new Sweet Peas; and four new seedling Montbretias. The catalog is well printed on good paper and is bound in stiff paper covers, the front page bearing a representation of the flowers and foliage of Hydrangea Hortensis Nikko Blue, and the reverse page Farquhar's Peony Flowered Dahlias, all in natural colors.

JAMES CARTER & CO., High Holborn, London, England.—"Garden and Lawn" for 1910, being the firm's catalog of Vegetable and Flower Seeds. The book contains 293 pages, profusely illustrated with unusually fine half tone illustrations, on heavy paper stock. The Vegetable section is very complete, giving an idea of its magnitude it may be mentioned that twenty-nine pages are given up to garden Peas alone, a product which has ever been a specialty of the firm. Somewhat of an

innovation is a list of vegetables, varieties especially suitable for growing under the French method of intensive culture, and in which the reader has seen growing under the skilled cultivation of the Cyclamen maritimum around Paris and elsewhere in France. The general list of flower seeds is very extensive and occupies some 126 pages. A list of "Esthetic or Decorative Flowers for Cut Blooms" describes lilies, white, yellow, blood and orange Marguerites, Corocels, Poppies and similar flowers. Asters occupy six full pages in Cinerarias, a beautiful novelty, Carter's Cactus, is the subject of a fine color-plate. It is claimed to be an entirely new break in Cinerarias, the edges of the florets curve like a single Cactus Dahlia; the colors and combinations of colors in the florets are many. In Cyclamen, Carter's Butterfly, the petals are broad across the top, and the edges finely curled or waved; the colors are various, and the flowers, carried on long and slender stalks, are expected to become a feature in the making up of high class bouquets. There is a section of the Cyclamen Peas, with fifteen of the principal varieties shown in a fine color plate. Lilies, Gladioli, Tuberoses and other bulb and root stock are described, and trees, shrubs and foliage, decorative and flowering plants are also listed. Greenhouse and garden tools and supplies, and garden furniture are, as usual, a feature in the book. The publication appears within stiff blue paper covers, with the title, and the royal arms bearing the all-important English legend, "By Appointment," neatly embossed in black.

STUMPF & WALTER CO., New York.—Spring Catalog for 1910, of which two editions have been printed, a Western edition of 80 pp. and an Eastern of 112 pp. A valuable point in favor of this production is noted in the large, clear type which has been used; while this feature adds materially to the cost of mailing it is a question whether, in the long run, the improved appearance and the ease with which its pages can be searched for material wanted, is not a well paying offset. Five pages are devoted to novelties and specialties in Vegetable Seeds, among which we note S. & W. Co.'s "Dark-leaved Globe Beet" and S. & W. Co.'s "Large Late Solid Dutch Cabbage." Among novelties in Flower Seeds are S. & W. Co.'s "Late Branching Aster," of which there is a full listing, including halftones of Aster Mary Semple and Aster Rose King, mate to Violet King, claimed to be the peer of the grandest Chrysanthemum. The catalog is beautifully and profusely illustrated throughout, cultural directions are given for each variety of seed listed, and the contents include every desirable variety in Flower and Vegetable Seeds, Farm Seeds, and Lawn Grass Mixtures that can be required. Sweet Peas occupy considerable space, and also do Asters. Summer flowering Bulbs, Fertilizers and Garden Supplies complete this very desirable catalog. An attractive insert sheet containing an offer of S. & W. Co.'s Giant Flowering Collection of Gladioli, printed by the four color process, is especially attractive; it comprises twelve varieties of select named and back—also from four color plates which, by the way, when artistically treated, forms a most desirable, taking and not expensive attraction for the public, superior to the majority of lithographic effects and equal to the best. In this instance the front cover illustration shows three large Asters. Holbein's white and light blue and S. & W. Co.'s Late Branching Pink. On the back cover at top is a lawn scene with Evergreens and house porch in the distance; nearer by is a large circular border of Begonia Erfordii (shell pin) which in turn encloses another border of Stocks S. & W. Co.'s Abundance (rose). The walks between and surrounding these beds are of grass. The entire cover design is striking and effective.

R. VINCENT, JR. & SONS CO., White Marsh, Md.—Geraniums, 1910. For several years this house has surpassed, each year, its catalog of the previous year, and would appear as though this one of 1910 had positively reached the height of possibilities in the way of artistic development. Known to the trade as the largest Geranium growers and disseminators in the country, the Vincent Company has made it a point that its catalog should be representative of its large stock in this particular branch of horticulture. We find listed Brunt's 1909 novelties in singles and doubles, in the Cyclops division and other types of Brunt productions, also those from the same house of 1908 and 1907; Rozain-Bonchar's 1909 novelties in singles and doubles, also those of 1908 and 1907; V. Lemoine's 1909 and 1908 novelties in single and double varieties, also his varieties of 1907. Then there is a listing of the newer varieties of special merit, of the standard varieties in doubles and singles of Cactus and flowering Geraniums, the standard Pelargoniums including the small-flowered Pansy type, Geraniums having variegated foliage, Ivy-leaved varieties and several scented leaved varieties. Four pages in lifelike colors, reproduced from water color paintings, carry three pages of a series of pictures of Colonel Thomas, Paul Crampel, Leon Raudrier, Mlle. Anastasie Ledard, Leopold Bouille, Pamela, Mrs.

Lawrence, Jean Oberle, Alliance, Anais Scalas, Jules Vasseur, and Omella. The fifth plate, by the Lumiere process, is an exact reproduction of the Geranium stock house at White Marsh, Md. Ten full page plates are charmingly shown in black relieved by a delicate background of a delightful shade of green, reproducing pictures of various varieties, such as Konigin Olga Wurtemberg, Frau Bertha Schaffer, Admiral Jones, Berthe de Presilly, Mme. Laporte-Bisquit, Peter Henderson, Mme. Recamier, Roi Edouard, Claire Albane, Sycamore, Fei, Commandant Ott, Maxime, Kovalevski and Rival. The cover is one of the most attractive of this year's catalog productions. It is of pure white heavy stock; a simple border encloses the artistic lettering, and an oval panel, in color, of a truss of Geraniums M. Anatole Roseleur is sunk into an embossed frame. The picture itself is a little art gem. All interested in Geraniums should certainly have a copy of this superb catalog.

HENRY A. DREER, Philadelphia, Pa.—Dreer's Garden Book, 1910, 72d Annual Edition. A 256-page Catalog of Vegetable and Flower Seeds. There are four color plates backed with half-tone full page plates, and reading pages are profusely illustrated. The title "Garden Book" is well applied, for in addition to the ordinary matter contained in catalogs, cultural directions are freely given. Six pages and a backed color plate are given up to vegetable novelties, which include Beans, Cabbage, Beets, Carrots, Corn, Celery, Cucumbers, Lettuce, Melons, Mushrooms, Peas, Radishes, Peppers, Spinach, Squash and Tomatoes. These are followed by a treatise on The making and Care of Hotbeds and Cold Frames. Following the category of ordinary seeds are pages devoted to Grass seeds for lawn and field, and field, forage and silo seeds. The horticultural section of the book begins on page 51 with chapters on Annuals and How to Grow Them, and Raising Perennials from Seed. Nine pages and a backed color plate are devoted to novelties and specialties. Amaranthus Sunrise, a rare variety is illustrated and described, and there is a description of a new double flowering Snapdragon. A color plate displays six double and six single forms of Dianthus, novelties every one of them. The back of the plate shows Dreer's Four Favorite American Asters, Calliopis Tiger Star is a novel and pretentious variety of popular flowering annual. Burbank's Shasta Daisies are prominent, seed stated to be received directly from Mr. Burbank. There is a splendid line of new hybrid Delphiniums, representing the finest varieties of a famous English collection. Perberia Jamsari hybrid is a welcome addition to the species, and embraces hybrids in various colors. In Heleniums there are two striking novelties, and there are three new single Annual Poppies. Fra Diavolo is a new variety of Solanum capsicastrum—Jerusalem Cherry—with close, compact growth and foliage somewhat sparser and lighter green than the original type. A new dwarf blue Salvia is described as being more dwarf and compact than others, the flowers larger and more intense in color. Twelve new varieties of Sweet Peas are described under the heading "Dreer's Orchid-seeded Sweet Peas." Thirteen pages and a backed color plate are devoted to Roses, the varieties Lyon, Harry Kirk and Dean Hole—Dreer's Trio of Hardy Everblooming Roses—subjects of the color plate. Hardy Perennial Plants form a large section of the book; among the novelties and new sorts featured are a new variety of Achillea, Japanese Anemones, a Spiraea, Hardy Asters, a semi-double Shasta Daisy, Irises, Rudbeckias and Trollius. Other sections cover Choice Hardy Shrubs, Climbing Plants, and Small Fruits. Water Lilies and Aquatics are given a "Department" of their own, with a treatise on "How to Grow Water Lilies," written by the expert of the establishment. This section is a unique one and speaks much for the enterprise. Dreer's Garden requisites and supplies form the concluding section of the book. The publication is bound in stiff, green paper covers, with the title embossed in gold on the front page. We have also received Dreer's Market Gardeners' Wholesale Price List, which is supplementary to the general catalog.

H. E. FISKE SEED CO., Boston, Mass.—Seeds, Bulbs, Plants and Poultry Supplies, 1910. This house presents a compact catalog of 96 pp. replete with select offerings of the choicest seeds in flowers and plants, and listing additionally a full line of Summer Flowering Bulbs, the chapter on Dahlias being particularly full; Hardy Lilies, Summer Bedding Plants; Water Lilies, Hardy Hybrid Tea and other Roses, Climbing Vines and Shrubs and Hedge Plants, Hardy Perennials and Ornamental Shrubs are listed extensively. There is also a section of Ornamental Trees, Dwarf and Standard Fruit Trees and Strawberry Plants. A full line of Fertilizers, Insecticides, Spraying Implements, Lawn Requisites, Sundries for Garden and Farm and Poultry Supplies is also advertised. Throughout the book is carefully illustrated with a profusion of choice and well selected half tones of the goods so appetizingly set forth. The covers are in black and white; the front one showing a group of Asters. The back cover carries two realistic field

views of vegetables growing on the company's grounds, the one, a field of Danver's Half Long Carrot and Globe Curled Savoy Cabbage growing for seed; the other, a field of Home Grown Danver's Yellow Globe Onion for seed; both pictures capitalizing to some extent the magnitude of the firm's operations.

We wish to impress upon our readers that all questions intended for this department must bear the name of the sender, and necessarily for publication but as a guarantee of good faith. We will endeavor to answer all questions submitted to us by subscribers, but we cannot recognize anonymous communications.

IDENTIFICATION OF PLANTS—When sending specimens for names correspondence should send some lower leaves of herbaceous plants as well as upper ones, and of all plants, flowers and seed vessels if possible. In addition to this, if stated whether it be shrub, tree, herbaceous, wild or cultivated, location where growing, it would often enable identification of specimens difficult to determine otherwise.

(16) **Carnation Production.**—Will you kindly give us some information in regard to what Carnations ought to produce, in order to make them to pay. We have kept records and have our averages, but have no standard of comparison. What is the average number of flowers to the plant that should be produced up to Jan. 1, also for the whole season, when well grown, of White Perfection, White Enchantress, Windy, May Day, Beacon, and Winsor?—C., Illinois.

—The amount of Carnation blooms produced per plant up to Jan. 1 is purely a matter of conjecture, and depends a great deal on time of planting, pinching and the grower. But to prove profitable, each plant should produce 20 to 25 flowers for the year, although this number may be reduced if the returns for the year were above normal, and stock first-class. A great deal depends on having blooms when your commission man needs them, to enable him to secure best price and to sell out. Your varieties are good ones and if product is in any demand, and grown right, should pay. See discussion on a similar subject in the Baltimore news in last week's issue.

(17) **Sweet Pea Troubles.**—Please let me know what is the matter with enclosed Sweet Pea. I planted them two weeks ago, and keep the houses 40° to 45° at night and 60° to 70° at day time? H. E., New Jersey.

—Samples of Sweet Peas sent here by you are filled with scale and it would be cheaper to replant than to rid the plants of the pests. You will also need to use different soil, as this evidently from that your trouble comes. If you are troubled again, spray with Nicotinic, Aphine, or some other equally effective remedy. It might be well to raise your high temperature nearer to 50°.

(18) **Growing Asters.**—Would you be so kind as to inform us about Aster growing? We have about 8 acres of ground which have not been used for a long time and the ground is very poor. Could this ground be ploughed early in March and the middle of April, manured well, and ploughed again in the first week in May? Or would it be better to plough in March and then in April, and put good bone meal under plants? Which do you think would be a better plan to follow? The ground is very light loam, but very poor. P. B., New Jersey.

—As Asters make such small roots, would advise the placing of bone meal near the roots when planting, repeating the dose two or three times while growing. If you have plenty of manure on hand, by all means spread it on soil before ploughing. Once ploughing should be enough. Sheep manure is also a good fertilizer to use while plants are developing. Throw a handful around each plant, and during the cultivation it will work in the soil.

(19) **Privet Comparison.**—How does the California Privet foliage compare with Ligustrum Japonicum, L. sclerophyllum and L. macrophyllum? Has the California Privet shining green leaves? Could the California Privet be grown into shape like the three evergreen varieties? Can the evergreen be purchased as cheap as the California Privet? Does the evergreen grow as quick as the California Privet? Thanking you in advance, W. H. L., California.

—The foliage of Ligustrum lucidum is much larger than L. ovalifolium (California Privet), the upper surface of the leaves being dark and glossy. L. Japonicum has leaves the same size as L. lucidum but of lighter shade and dull,

The California Privet can be grown into any desired shape. The varieties of Ligustrum vary somewhat in price, for which see the catalogs of any of the prominent nurserymen. California Privet leaves have not such a glossy surface as the other varieties.

(20) **Lilies and Other Stock for Easter.**—I have a lot of longstemmed Lilies for Easter. They were potted December 15 and placed in a cool house, and made a slight root growth. About a week ago I removed them to a Carnation house. Is it possible to get them in for Easter, and what temperature should I give them? Please give me full details, also tell me when to bring Hyacinths, Tulips, Narcissus Von Sion and Paper Whites and Spiraea Gladstone in from outside, and what temperature to give them to have them for Easter?—F. W., Penna.

—Your Lilies having such slight root action, would hardly be in shape for Easter, as a temperature of 65° night and day is necessary for well rooted bulbs. Would you like to get the plants develop gradually, without undue forcing. This will pay you better than trying to get them into bloom with such a poor start. Lilies for Easter should be 8 to 12 inches high and well rooted by this time. Bring in your bulbs about four weeks before wanted. Hyacinths make a trifle longer than Tulips, for which allow full three weeks at a temperature of 60° at night. Spiraea should now be potted, and put in a temperature of 50° at night, give plenty of water, they are thirsty plants. Allow a few days for all your plants in a cool house before selling, a proceeding of advantage to all.

(21) **Sweet Peas, Violets, etc.**—1. When is the proper time to start Sweet Peas in 3-in. pots to have same 3 inches high by May 1? 2. About when will it become necessary to shade Violets, in bloom, from rays of sun? 3. Is there any preparation which will bring angle worms to the surface so they can be caught, a preparation harmless to the plants and effective? If so in what proportion should same be used?—J. P. A., New York.

—1. About March 25. 2. Depends a great deal on the weather conditions and daily temperature inside. If the latter gets too high and your Violets show signs of same about March 1 then put a very light shade on, and increase as necessary. 3. Lime or tobacco water. If this is not effective, get some bisulphide of carbon; make holes in the soil 4 or 5 inches deep, 9 inches apart; pour about a tablespoonful of liquid in each hole, and close up immediately to keep worms in the soil. This should kill all worms in a bench.

(22) **Rust on Carnations.**—Will you be so kind as to advise me what the rust appearing on enclosed Carnation leaves is; and whether it is of consequence; if so, what is the proper way to treat it? Will you also give me an opinion as to the value of outside plants, such as Narcissus, Paper Whites, planted in flats dry, covered with astes and leaves and now frozen up? They are intended for Easter of course.—S. B. H., Conn.

—The Carnation leaves sent are filled with rust, and we would advise you to spray with Bordeaux mixture for formula and instructions for which see answer No. 15 in our issue of January 15. Bring in your Narcissus bulbs about four weeks before wanted.

(23) **Suitable Planting for Old Houses.**—I have four houses, 55 ft. x 12 ft., heated with hot water, and would like to know what I could grow in your opinion, that would be the most profitable for this type of house. The houses were originally violet houses, but have been idle for a couple of years. From the highest point on bed to the ridge is a trifle over 6 ft., although I have one house of 7 ft. or 8 ft. to ridge. The beds are solid, having stone drainage at the bottom and no heat under the surface. They are in a good location and get plenty of light. I can run them to 60° in the coldest weather. I can sterilize any of these houses with my boiler as it is fitted for the work. Any suggestions will be greatly appreciated.—W. C. M., Mass.

—Unless you filled the houses with bedding plants and grew them on for Spring use, there is not much to do this time of year except to prepare for coming seasons. There are many things that can be grown from seed, for instance Asters of the various varieties, using one variety for each house. See your local dealers and find out what kinds are suitable for their market. Planting Gladioli, Tuberoses and other bulbs can also prove profitable. You might secure enough Carnation cuttings of the best kinds and grow these on for next year's crop. If you maintain 60° at night, and have good soil, would suggest you secure young plants of Asparagus plumosus nanus now, and grow these on, and about July 15 plant them in one or two of the houses. This makes a good crop to grow when rightly handled. For trade at Memorial Day would suggest growing on of Geraniums, Heliotrope, Double Petunias and other mixed plants which can be secured at small cost now, through our advertis-

ing columns; while from seed sown now Ten Week Stocks, Single Petunias, Ageratium, Verbenas, Alyssum, and many other things can be grown, and will be found useful in a residential district, not forgetting some vines, such as Cobaea scandens, Pileogyne, German Ivy, Vinca variegata, Nasturtiums, etc., for porch and window boxes.

(26) **Geraniums Diseased.**—I send you some Geranium leaves, which are infested with something I do not understand. Will you kindly tell me what is the cause, and also the remedy? Do you think it due to the soil I am using?—E. V. B., New Jersey.

—The Geraniums are certainly badly infested with a constitutional disease, which has been brought about by adverse conditions in the greenhouses, and unless it is some valuable variety would suggest you discard the entire lot. Otherwise pick off and burn all diseased leaves, shake off all soil and repot in clean pots and soil; also keep the plants sprayed with Bordeaux mixture. But concerning how to pick off, to obtain strong rooted cuttings the easiest way to rid yourself of the trouble is to burn all the plants.

(29) **Remedy for White Fly.**—Please give me some information in regards to a remedy for white fly.—W. S. S., Conn.

—If you can use hydrocyanic gas this would be found very effective; otherwise, spray with Nicotinic, Aphine, or some other equally effective insecticide, for which see advertisements in our columns.

(34) **Sweet Peas Under Glass.**—Please advise me through your columns as to the proper temperature for Sweet Peas, and how many rows would be best for an even span house 34 ft. wide? Would it be possible to grow Carnations in the same house at the same temperature? Also kindly inform me as to the number of plants per foot of bench, as quoted in your paper by the dozen bunches? What is considered an average crop of flowers per plant for Carnations? W. L. H., New York.

—Bunches of Sweet Peas for the New York market contain 6 bunches, 12 stems per bunch, making 72 stems in each bunch offered for sale. Plant Sweet Peas the long way of the house, in rows 3 ft. apart, in a temperature of 45° to 50° at night, and 10° more during day. Would suggest partitioning off the house for Sweet Peas, as the temperature necessary for them is a trifle too low for Carnations, although many florists have success with the combination. Some varieties of Carnations yield more than others, but ordinary kinds should produce 20 to 25 blooms each plant to prove profitable, considering the market all the year round.

(36) **Deutzias and Rhododendrons for Easter.**—Kindly let me know when I must bring in Deutzia gracilis for Easter blooming; also when to bring in varieties of Rhododendrons as follows: Caracatus crimson; Fastuosum flore pleno; Flushing; Parson's grandiflorum rubra; Helen Waterer; Prince Camille de Rohan?—G. L., New York.

—Your Rhododendron plants should be in a warm greenhouse now, as this class of plant can be held in a cool house for a week or more when in bloom. Keep buds syringed, to have them open evenly, also to assist the bud to swell more quickly. 65° at night is necessary for them. If your Deutzias are outside bring them in about February 1, and put them into a cool house until about March 1, when they can be carried to a house, where 60° to 65° at night can be obtained. This variety of plants gives better satisfaction when allowed to harden off a few days before selling.

The Propagation of Nephrolepis

What methods are followed by the large growers in propagating Roston, Scottii and Nephrolepis Ferns generally, for quick growing?—R. H. C., Conn.

—Extensive growers of Boston and other varieties of Nephrolepis use the following method for propagating. The stock plants are set out in good soil, about 8 inches apart each way; and the tops of the fronds are then cut off to within six or eight inches from soil, this being done to give quicker root action, causing numerous runners to shoot out, which eventually form crowns, and these, when large enough, are cut off and potted. Sheep manure or other light fertilizer is sprinkled frequently on the soil, commencing three or four weeks from the time of planting, the result being strong offshoots which mature into shapely plants very rapidly. When runners are potted they should be placed on a bench where good steady bottom heat can be given them, and kept close and moist until signs of growth are apparent.

—The grower of the fancy varieties of Ferns allow the leaves to develop on the stock plants, which are then sold to retailers at a fair profit, in this manner securing a double return from the same plants. The leaves are useful to retailers and in some markets reach a good figure.

GERANIUMS

All sold until February. Orders booked for February and March delivery. Nutt at \$10.00; Poltevine and Ricard at \$12.50 per 1000.
 ASPARAGUS Plumosus, \$25.00 per 1000; Sprenger, \$15.00 per 1000. Ready now.

THE EXCHANGE—Best Advertising Medium

Los Angeles

The chariot race and "Wild West" scenes of the New Year Tournament of Roses, which were postponed this year for one week because of rain, were held at the grounds of the Association Jan. 8. The weather was ideal. The atmosphere was balmy as May in the Atlantic States, and calm, just enough breeze to waft the immense balloon away to the Northwest, along the foot of the mountains for ten miles, where it was landed in the village of Glendale, as easily and softly as though it had been a bird. The time of flight was 1h. 43m.

The chariot races, however, are the scenes which thrill. If those of the Roman arena were more thrilling they must have been hair-raisers sure. Four lithe, muscular horses to each chariot. In their practices before the contest all is quiet except the pounding of their own hoofs upon the solid track—but now the scene is changed. The presence of 10,000 people with nerves at high tension, waving flags and banners, the blare of brass bands, the eager expectancy as to the outcome, because of the danger to life and limb of the charioteer and his steeds, fill the very atmosphere with a magnetism which is contagious, and seems to be shared by the horses, which when the signal is given to start, are in a frenzy of excitement. Strong must be the arm and steady the nerve, and both controlled by a clear, cool head to guide four frantic animals in a mad dash, a veritable runaway. In their excitement they lay their ears back and stretch their bodies out so low as to almost touch the ground. The pounding of their hoofs, the rattle of the chariots, the cheering of the excited, enthusiastic crowd is wonderful to see, to hear, to feel. A chariot race in a circus tent is a tame affair compared to those held in the open, with the heavens for a dome, and the bright California sun to light the scene in our atmosphere, dry and highly electrified. Balloon ascensions, the flight of aeroplanes, and all the modern airships are quiet affairs as compared to the chariot races of the Tournament of Roses of Pasadena, Cal. A feature of this annual fête is an exhibition of horsemanship by men and women, simulating the days and scenes when the West was new to white men, the days when it required men with wills of iron and nerves of steel to meet the emergencies. The ratty little bronchos they ride, made up of bone and sinew exclusively, are apparently indestructible. Buffalo Bill's Wild West Shows are, comparatively speaking, quiet exhibitions, for the reason that their maneuvers are confined to the circus ring, while here a twenty-acre field is the arena, and some number not on the program is liable to appear, unexpected and unannounced; and because of that fact the interest is great during the performance from start to finish, on the part of the performers and the spectators.

Henry W. O. Melvny and Charles Silent, able attorneys and enthusiastic horticulturists, have been appointed to the board of Park Commissioners of this city, which has a park system of over four thousand acres. These two men spend money with a lavish hand growing ornamental plants for pleasure, both at their city homes and large country estates. A great deal of knowledge relative to the habits and characteristics of exotics and their adaptability to southern California climatic conditions is due to the extensive and expensive experiments of these two plant enthusiasts.

D. P. Reichard, of Morris & Snow Seed Co., who was so severely burned at Christmas while playing at Santa Claus, has so far recovered that it is now definitely known how much skin grafting will be necessary to cover the wound—between 150 and 200 inches. He will be removed from his home at Covina to one of our hospitals this week on Jan. 15 to have the process begun.

P. D. BARNHART.

Stratford, Conn.

Mrs. L. G. Mills has 5000 sq. ft. of glass and grows Carnations, Callas, bedding plants and Pansies. She has recently opened a retail store in E. Bridgeport, at 1124 E. Main st. Plans are made for additional glass this coming Spring.

Frank E. Bacon has one house, 24x48, devoted to Carnations and a general mixed stock for retail trade. The past Christmas trade was much better than any previous year for the past ten years.

A REVIEW OF THE MARKET

Violets
Chrysanthemums
Bedding
Lilies

NEW YORK.—The condition of the cut flower market remains about the same as last week, and while there has been considerable activity in all lines, the amount of available material has exceeded the demand. Midweek conditions are such that, as a rule, but little business is accomplished, and with receipts as heavy as other days of the week stock accumulates rapidly. Usually on Monday and Saturday of each week a greater activity is noticed. The American Beauty Rose situation remains unchanged, and but small demand is felt for flowers; top grades, however, realize 50c. Receipts, fortunately, are light. Tea Roses have met with a better demand, although the heavy shipments are far from allowing a general clean up. Medium grades have been moving more freely and are realizing a fair average figure. Top grades of all varieties reach \$15; other grades, according to quality, \$4 to \$10. White Roses have been in great demand the past two days, and a general clean up of these has been accomplished at varying prices.

Carnations are becoming more plentiful, and the quality is considered to be far superior to that of other years, at this time. Red and pink sorts are in large and unlimited quantities. Extra quality Enchantress and White Perfection realize \$5 per 100, but for ordinary grades \$2 to \$4 is the range.

No great change is manifest as regards Orchids, although the market has been recently thoroughly cleaned up for large and moderate orders. The demand is such that 50c. still remains the top figure, while 35c. for medium grade flowers is a fair average. Cypripediums are very plentiful and range from 10c. to 15c.

Lilies are abundant and are hard to move at \$1.50 per doz. Top grade stock reaches \$1.50 per 100, but so little of this is received that it has no bearing on the general market. \$8 to \$12 is the range of most sales. Lily of the Valley is hard to move, and sales have been recorded at \$2.50 per 100 for good grade flowers. Job lot offerings at \$2 per 100 are frequently in evidence.

Daffodils are arriving daily in very large quantities and are hard to move; prices range from \$2 to \$4. Paper White Narcissus continues to flood every wholesaler's store and \$1 per 100 to clean up is the rule. Tulips drag, and at the price of 2 dozen for \$1 remain unsold.

Violets are becoming a hard proposition, and warm weather will encourage street offerings by the fakir. Prices range from 20c. to 50c. per 100. A few selected flowers realize 60c., but there are so few of them that they should not figure in quotations. Sweet Peas are a glut, and only top grades sell, prices ranging from 50c. to \$1 per 100. Gardenias are plentiful and sales at very low figures are made, one sale of 200 for \$10 being a fair sample of the conditions. Adiantum and other greenery moves well.

PHILADELPHIA.—In spite of the stormy weather of last week a general clean up in all lines was experienced. Especially was this so of the medium grades of Roses, the demand for which was heavy, and continued so until Monday night. Of course, the dark weather has been responsible for short supply, and the market is also feeling the results of the undue forcing of flowers for the holidays, a fact which should be borne in mind by growers, especially as at this time of year most flowers bring a good average price which, although not as high as at Xmas, is enough to satisfy the vitality of plants is considered. American Beauty Roses are apparently all off crop, and what few are offered bring prices ranging from 25c. to 50c. No great demand is being noticed for them at even this price. On Monday of this week medium grade Tea Roses of all colors were in good demand, several wholesale houses having completely sold out early in the day. Pink of any variety would have been acceptable, the

strong demand having been caused by forthcoming social events. Prices ranged from \$4 to \$12, according to grade.

Carnations are plentiful; white are most called for, but all colors are cleared out fairly well at prices ranging from \$1.50 to \$4, the latter being paid for top grade White Perfection. Reds are very plentiful.

The Orchid supply continues spasmodic, and prices range from 30c. for medium to 75c. for top grades, with the demand about equal to the supply. Cypripediums are more plentiful, but the height of production of these flowers has evidently passed for this season, so that the supply will gradually fall off.

Lilies have met with fair demand, and plenty are on hand to meet all wants, at prices varying from 8c. to 15c. Lily of the Valley is plentiful in the smaller grades, out of town shipments using up all the available supply of top grade material. From \$2 to \$5 per 100 is the asking price for them. Callas are not over plentiful, and move moderately at various prices, with no great demand noticeable for them. Narcissus is dragging, and the supply is away beyond that of any previous year; efforts are made to clean up, but are recorded at \$1.50 per 100. Single Daffodils move well, but the double variety is hard to dispose of, on account of the green appearance; the general opinion is that this does not force properly at this date, and unless good colored flowers can be procured no great sales are to be expected.

White Tulips have made their appearance, but only in small lots, and short stemmed, fit only for funeral and basket work. Violets move well and prices vary according to quality and age, and range from 35c. to \$1 per 100. Lilac is appearing in greater quantity and offerings at 10c. per bunch are frequent, although top grade material still reaches the \$1 per bunch mark. Sweet Peas are quite plentiful, although they move freely and a better clean-up at fair prices is possible now than for some time past; top grades go at \$1 per 100. Greenery of all kinds is moving well, and good prices are obtained.

INDIANAPOLIS.—Funeral work, counter trade and decorations were well distributed among the shop-men during the past week and satisfactory reports are received from all quarters. The wholesalers, naturally, had little left on their hands and received prices which though lower in instances than the preceding week, were all they should have been for this date.

Spring flowers, such as Jonquils, Narcissus and Roman Hyacinths were in most demand at \$3.50 to \$4 per 100. Lilacs at \$20 per 100 and Sweet Peas at 50c. to \$1 received their share of attention.

Carnations, now in their prime, are a most useful commodity and lead in the number of sales. Prices remain close to \$3 to \$4 per 100, wholesale, and 75c. to \$1 per doz., retail. The variety of good kinds is, at this time, too lengthy for the casual observer to enter into, but it is obvious to all that the Carnation producers are not standing still.

Bride and Bridesmaid are being cut in quantity in this locality at \$3 to \$8 per 100. Killarney, for the time being, has to be shipped in and consequently is not so much used, at the same figure. Am. Beauty, because of the dark weather, are not so good at \$5 to \$50 per 100.

Home grown Cattleyas sell fairly well at \$40 to \$50 per 100; the shipped product does not always give satisfaction.

The plant line is being well taken care of with a fine line of blooming shrubs beside the staple articles. Rhododendrons with their wealth of color and good size are again available for window dressing. Bulbous stock is here, too, in pots and pans. Tulips, Crocus and Hyacinths are always good sellers at this time.

BOSTON.—Business continues good. The weather has been typically wintry and flowers have been a good deal in demand.

Roses continue to be scarce especially the medium grades. Those most in demand range in prices of from 4c. to 8c. There are some excellent grades at a much higher figure however. Carnations continue at the same even price; there is a fairly good demand for the best grades. Orchids are more plentiful, especially Cypripediums. Lily of the Valley continues steady. Lilies are more plentiful than they have been. Violets are steady and not over abundant. Sweet Peas are more plentiful. Some fine grades of Mignonette and other such flowers are seen.

CHICAGO.—The market at this writing is in a very undecided condition, and it is almost impossible to make any statement regarding it. Prices have advanced from 25 to 50 per cent. over last week and the prospects are that the stock will advance to Christmas prices, unless the continued dark weather breaks up and we have sunshine for a few days. The outlook is anything but encouraging to the growers. At this time there is a decided shortage of stock in all lines. Prices are simply extravagant for this season, a most unusual occurrence, as if the sun would only shine there would be quantities of everything in season. In the Rose line is the most marked shortage in all colors. The cry in the past few weeks has been for white, but this week Killarney, Richmond and all varieties are equally as much in demand. Prices range from \$4 to \$15 per 100, and all stock cleans up.

Carnations are also commanding better prices, and any decent stock is selling at \$4 per 100.

Sweet Peas do not look as well as usual, as they also are suffering from weather conditions. Lilies continue scarce and all arrivals are taken without any effort on the part of the commission men. Prices have not advanced as perceptibly on these as on Roses.

Paper White Narcissus is being taken more freely owing to shortage of other flowers, but Roman Hyacinths are not in as good demand. Violets are coming in from the East in very good shape, both as to size and coloring. White Lilac has made its appearance, but is only visible in one or two places, and no price is quotable. Orchids and Gardenias are no more plentiful than for some time past. Tulips are showing up in several colors and look very prepossessing. There are complaints heard all over regarding the condition of common Ferns, the quality being anything but good. This is a little early for complaints in this line. All miscellaneous stock is getting a chance to move off with a little more activity than usual.

ST. LOUIS.—The market was very irregular last week at all the commission houses. One day the stock would come in abundance and the next day everything would be scarce, but the demand has been much heavier of late than at any time this year (which is only two weeks old). The regular social season has about opened and from now to the end of the season, which closes when Lent commences, the uptown florists will have plenty to do with weddings, receptions, balls, dinners and other social affairs, as the season promises to be a lively one, according to the social news of the daily press. The downtown retailers say that transient trade has been most excellent last week, plenty of funeral work being turned out by them and large designs at that.

Prices on stock at the commission houses were up and down last week. Roses, Violets and Carnations were the flowers that sold at irregular prices. Extra good American Beauty Roses bring from \$3 to \$4 per doz.; medium from \$1.50 to \$2; extra short from 50c. to \$1 per doz.; Carnations, fancy, from \$3 to

\$4 per 100, others from \$1 to \$2 per 100; Violets, 50c. to 75c. per 100; Callas and Harrisii Lilies, \$10 to \$12.50 per 100; Lily of the Valley, \$2 to \$4; Roman Hyacinths and Paper White Narcissus, \$1 to \$2 per 100; Sweet Peas, 50c. to 75c. per 100; Stevia, 50c. Smilax and all other greens seemed to have had a big call all of last week. ST. PATRICK.

New York

For the A. C. S. Convention at Pittsburgh full arrangements have been made for delegates going from this city. See editorial page.

An auction will be held Jan. 26 at 14-16 Vesey st., New York, at which time the estate of the late Thomas Patten will be offered for sale; this will include, besides other holdings, the building occupied by Traendly & Schenck on W. 28th st.

The buildings occupied by Walter F. Sheridan and Geo. Saltford have recently been sold to real estate dealers.

J. A. Peterson of Cincinnati was in New York this week, and had with him specimens of his new Begonia "Pride of Cincinnati," and which have since been on view at Traendly & Schenck's store. The opinion of prominent growers regarding this Begonia is that it is a winner and will prove popular when introduced. It is a large flowering variety, with clusters of bloom, of a pleasing shade of pink, borne on strong stems. The foliage is heavy, with a mass of flowers above it, forming a pleasant combination.

Walter F. Sheridan is handling a fine grade of white Lilac.

The Futaba Garden, at 615 Madison ave., handles Japanese bulbs and dwarfed trees exclusively.

A fine electric sign has been placed in front of The Flower Shop, 136 West 42d st.

Frank Good, who recently severed his connection with J. K. Duer of 644 Madison ave., is now with S. A. Anderson of Buffalo, N. Y. A. Stapleton is his successor in Mr. Duer's store. A. Penget, formerly with Salter Bros., of Rochester, N. Y., is the new assistant at the store.

The dinner committee of the New York Florists' Club held a meeting on Thursday afternoon of this week, to consider a date for the annual dinner.

Manager Coan of the Growers' Cut Flower Co. says that if his shippers continue to increase their products as has been the case the past few weeks, it will be absolutely necessary to secure larger quarters.

The Orchid Florist of 69th st. and Columbus ave., has sold out to Chas. D. Foley, son of J. J. Foley of the Bowery.

Alex. McConnell had the decorations at the opening of the new mansion of George J. Gould, 857 Fifth ave. on Jan. 18. Orchids were the main feature of the decoration, some 3000 of which were used, presenting beautiful effects in the ballroom and salon, as well as on the dining tables.

The store window of this well-known florist was, this week, tastefully decorated with immense sprays of Oncidium varicosum and Vanda cœrulea, the latter showing some wonderful colorings.

The Kervan Co. is handling immense quantities of Galax leaves, many of which are now being used by Violet growers when preparing their product for

George Peters & Sons, the Carnation growers of Hempstead (L. I.) N. Y., are to have a Lord & Burham iron frame greenhouse built, in connection with their present plant, this Spring; the new greenhouse is to be 50 x 400 ft. This will no doubt be the largest greenhouse on Long Island.

We regret to learn of the loss, by fire, of two of the five greenhouses of Thomas Jones, the well-known Orchid grower of Short Hills, N. J., on the evening of Jan. 10. Although the firemen were on the scene shortly after the alarm was turned in, it was some time before water could be obtained. It was necessary to lay the lines of hose across the Lackawanna tracks, and several trains were, in consequence, stalled. Many valuable plants were destroyed, and it is understood there was only a small insurance on the buildings.

A thief who broke into the greenhouses of Emerson McFadden, Short Hills, last week, has been held in \$1000 bail.

Frederick Kuhnt, of the firm of Kuhnt & Son, the florists of Hackensack, N. J., is trying to solve the problems of aerial navigation and, in a large shed, is building an airship upon entirely new lines, which will carry considerable weight and yet be small and safe. A model of good size was tried out some two months ago, and proved so satisfactory that the larger machine was determined upon. The construction shed is 30 by 60 ft. and the machine is expected to be completely filled in. Mr. Kuhnt is already noted as an inventor of good things.

Some important changes in location are expected among the wholesalers on 28th st. this Spring. The store of the Manhattan Flower Market is to be occupied by Ford Bros., and Alfred H. Langjahr will occupy the present Ford store. A. L. Young's business is in no way affected by this arrangement, as he will concentrate all his energies at his store at No. 54.

Greek-Am. Florists' Ass'n. Ball

The third annual ball of the Greek-American Florists' Association was held at Terrace Garden, 58th st., on Monday, Jan. 17. It was a grand success from beginning to end, and the committee of arrangements deserves much credit for the able manner in which the program was carried out. The hall was decorated in a splendid manner, the decorations forming the chief subject of conversation. Hundreds of yards of Laurel roping were used, besides Christmas trees and other greenery. From the dome of the ceiling were suspended white doves, held by vari-colored ribbons, while myriads of small electric lights were dispersed among the greenery. The Greek flag, worked out in blue and white electrical effects was very striking, and many other features added to the general effect produced. At the opening of the grand march, live doves were liberated, and these circled above the dancers.

Dancing continued until the small hours, and was indulged in by all branches of the trade, including the entire wholesale district, which was fully represented. Since the ball, the one expression heard is that it was "a howling success," and will be long remembered as a night when everybody was made to feel as much at home as possible, while the social and convivial features will be recorded as the greatest in the history of this Society. Each person was given a miniature silk Greek flag, which will be kept by many as a souvenir of the occasion. President George D. Nicholas is to be congratulated on being at the head of a very live Society. The committee of arrangements was composed of: Geo. Polykranas, chairman, D. J. Pappas, J. Chiotis, G. Comatas, M. Rovatos, D. Carlatos, Theo. Malandrenas; floor manager, Z. Varenas; asst floor manager, John Andriopoulos.

Wyndmoor, hit upon a good idea when he planted one of the greenhouses entirely with Sweet Peas, these having proved a very profitable crop. The planting, in a solid bed, with vines 10 feet high and filled with flowers, present a fine sight, both from an artistic as well as financial point of view. Callas, Snapdragons and Asparagus plumosus are some of the other products of Gilbert.

Watch these columns for the announcement of the date for ladies' night at the rooms of the Florists' Club of Philadelphia. The club room committee is anxious to make a complete success of the affair.

Edw. Heid journeyed to Richmond and Norfolk, Va., recently, his store meantime being in charge of "Stewart" who evidently fills the bill O. K.

Berger Bros. are handling some of the finest Marguerite Daisies ever seen in this market. J. Berger has recovered from his injury and is again on the job.

Robert Craig has just returned from Boston, Mass., where he went in the interests of the S. A. F. to consider the schedule and other matters relating to the coming National Flower Show of 1911, to be held in the City of Beans.

Wm. J. Baker is receiving Smilax in large quantities, and is handling quite a number of single and double Daffodils.

Arthur Nissen says that growers should realize that flowers are just as necessary after the holidays as during the days just preceding them, and that it might be better for all concerned if growers would not resort to unnecessary practices to bring their products in all at once, thus serving the double purpose of maintaining the vitality in the plants as well as stringing out the supply of flowers, a fact strongly emphasized during the past few days, when several growers have been heard to say, "No more for me," meaning of course, steady supply, and no more spasmodic efforts to ruin their plants. Taken all in all, and considering the extra labor put forth to secure a few extra dollars for two or three days, to say nothing of the added expense of coal bills, one wonders if there is really anything in it, especially when facts prove that through this month the average of prices, according to quality, has been equal to that of any other month.

Gardenias and Cattleyas are offered by the S. S. Pennock-Meehan Co., while special lots of Carnations at reasonable rates should prove advantageous to shipping business, when quantities of these flowers are wanted.

Detroit

No startling feature of any kind has appeared at the local outpost of floricultural activity. Our annual January snowstorm was of greater liberality than usual and all business was greatly interfered with for two days. Prices are normal, Carnations retailing at from 75c. to \$1; Roses \$1.50 to \$5, Am. Beauty \$3 to \$10 per dozen; Violets, \$2.50 per 100. Azaleas and Lilacs, in pots, are coming in and selling well. The greenhouse men are very busy getting their Lilies and Crimson Ramblers ready for Easter, all of them having well founded hopes for a great Easter trade.

Notwithstanding the heavy blizzard, young and old responded liberally to the call for the annual florists' dance. While friends are invited, it always works out to be a genuine family affair and Papa Sullivan increases the enthusiasm by playing his old violin.

The news of the natural gas explosion which wrecked the flower store of friend Tuson in Windsor was received with great sorrow here. He had a very nice, neatly fitted store in a building of his own, on the principal business street. To be deprived of its use at this season of the year seems very lamentable. Still, considering that nobody got seriously hurt and Mr. Tuson, who so unwittingly started the trouble, escaped with a general shake up, it is simply miraculous. For several days a strong odor of gas, which is used to heat the building and adjoining greenhouse, was noticed. On the eventful morning Mr. Tuson started to light a cigar and the same moment all four plate glass windows were blown to atoms. A heavy iron table and typewriter were blown 30 feet; most of the glass in the greenhouse was broken and the interior in general was badly wrecked. A few hours after this catastrophe laborers of all kinds were busy repairing the damage, and business will be resumed in a few days. FRANK DANZER.

Pittsburgh

Trade conditions have changed but little since last week; fairly satisfactory is

Boston

"The Use of Water in Commercial Gardening" was the title of the lecture in the regular Winter course at Horticultural Hall on Saturday. There was a good attendance and the speaker, who was H. M. Howard of West Newton, talked on the subject for over an hour and brought out many interesting and instructive phases of it.

The next lecture will be on Jan. 22. The subject will be "A Study of Continental Landscape Gardening," with stereopticon illustrations, by A. D. Taylor, Ithaca, N. Y.

There was a full attendance of the S. A. F. 1911 National Flower Show committee, on Friday and Saturday, and they put in enough hard work on the schedule to last for some time. F. R. Pierson presided and he kept the members busy during the whole of the meeting.

Chas. Roberts, who has had charge of the Duncan estate at Nahant for the past decade, has resigned and gone to take charge of the country estate of W. T. Barbier at Birmingham, Mich.

Peter Murray of Fairhaven is planning the erection of another house, 160x30. His crops at present are in excellent condition and, besides a fine lot of Carnations, he has an excellent showing of Lilies and Azaleas.

H. S. Dawson, manager of the Eastern Nurseries, is out again after having been confined to his home for two weeks with rheumatism.

F. J. Dolansky is extending two of his houses each 100 ft. more in length.

J. S. Manter has, besides his usual stock of high-grade flowers, some of the finest Mignonette seen in the market for a long time.

James Hamer is now assistant manager in the Park St. Flower Market.

Chas. Holbrook is about to erect two more houses, each 100x30.

Leonard Cousins will also add one house in the near future.

W. R. Pierson of Cromwell, Conn. let flowers take a back seat last week, his time having been taken up at the poultry show held in this city. Well, he managed to carry away ten Blue ribbons.

The Aphine Manufacturing Co. will give a public test of Aphine in the Park St. Flower Market on Saturday, Jan. 22.

Visitors this week have been quite numerous and included F. R. Pierson and J. R. Fotheringham, Tarrytown, N. Y.; A. N. & W. R. Pierson, Cromwell, Conn.; S. J. Reuter, Westerly, R. I.; Robt. Craig, Philadelphia; Jas. Robertson and Alex. MacLellan, Newport, R. I.; F. C. Green, Providence, R. I.

During the past five years the writer of these notes has derived much pleasure from the many friends he has met in gathering his items of interest and, in now severing his Boston connection with The Florists' Exchange, he wishes to express his appreciation of the kindly interest and assistance given him by his acquaintances among the growers, wholesalers and market men. This may come as a surprise to many, but a call has been received to a wider field and he feels that it is a duty to accept.

JOHN W. DUNCAN.

Kalamazoo

Another very heavy storm visited this section last week, demoralizing traffic and putting a few severe crimps into the transient business among the stores. However, there seems to be enough going on to use up all the stock obtainable, and as the sun still remains behind the clouds the increased cut expected has not yet materialized. This season has been, I think, the most cloudy and dark that the florists in this part have ever known, and there are no indications of anything brighter in sight. Skillful handling of Roses and Carnations has been required this Winter, and it is to the credit of the growers that the quality has been maintained so well. I think the cut has not been as great as usual, and with zero weather for days together the amount of fuel needed has made the cost of production very close to receipts. I suppose sometime even florists will realize that the prices of ten years ago will not suffice to meet the ever increasing expenses. Maybe, however, they expect the other fellow to "bust," and then of course they will get all the business and everything will be lovely.

Quite a lot of social events have occurred during this month and Van Hoochoves and Fisher have had considerable praise from the local press for their work. This class of business seems to be on the increase, and at apparently profitable prices. I think on the whole more money is being spent this year here for flowers than ever before. S. B.

Chicago

No sunshine for fully two weeks, consequently stock has shortened up considerably, and this week people are running from place to place to secure what stock is desired, especially in Roses in all colors and grades. It is impossible to find enough stock to fill orders. White Roses have been scarce for some weeks past, but at this time all colored Roses are just as much so. Other flowers are about equal to the demand. These conditions in one way are beneficial, as better prices, are obtained by the growers for their stock on account of the scarcity.

The following announcement was received by the Chicago houses last week: "Notice is hereby given that on Jan. 11 Henry Payne of Hinsdale, Ill., was duly adjudicated a voluntary bankrupt, and that the first meeting of the creditors will be held at the Court House in Wheaton, Du Page Co., Ill., on Friday, Jan. 21." Mr. Payne is a well-known florist and built his first greenhouses in 1893. He had about 25,000 ft. of glass. His flowers were handled by the Chicago wholesale houses. Mr. Payne has found it an effort to keep things moving for several months, and several Chicago florists

are among the creditors. Thos. S. Huntly was appointed referee.

A. Lange had the decorations for a banquet given by Jno. F. Smulski, ex-president of the West Park Board, on Saturday night last. The center pieces and table decorations were pink Killarney Roses and Ferns; the parlor and hall decorations were also carried out in a pink color scheme. Mr. Lange also had an elaborate wedding decoration same evening.

On Jan. 12, in honor of the occasion of Carl Cropp's twenty-fifth anniversary of his connection with Vaughan's Seed Store, the employees, both at the store and greenhouses, including the traveling men in Chicago and New York, presented him with a handsome mahogany desk for his home, as a memento of their good will. Mrs. J. C. Vaughan made the presentation in a charming address.

Leonard H. Vaughan in the bowling tournament of the Chicago Athletic Association, in a class of 40, bowled the highest score in singles, his score being 279 out of a possible 300. He won as a prize a handsome watch fob of Roman gold.

Mrs. Nellie C. Craig, wife of J. C. Craig, the florist, died, after a long illness, on Saturday last at her residence, 738 Oakley blvd., and was buried at Mount Carmel Cemetery on the following Tuesday morning. Mrs. Craig was 49 years old and had been a resident of Chicago for 46 years. She was the mother of Arthur, Herbert, Irene, Joseph, John O'Callaghan, Raymond and William Craig. The sympathy of the trade is extended to Mr. Craig and family in his bereavement.

Frederick Sperry, of Vaughan & Sperry, was on the sick list the past week.

A. J. Pieters, one of the principal contractors for seeds for the Government free distribution this year, is on his way from his ranch in California to Washington, D. C.

Chas. P. Braslan, of the Braslan Seed Growers' Co., San José, Cal., left Chicago Saturday, Jan. 15, en route for Washington, D. C.

D. I. Bushnell, the St. Louis seedsman, is spending some time in Mexico.

Albert McCullough of Cincinnati, O., spent several days in Chicago the past

week. Alfred J. Brown, wholesale grower for the seed trade of Grand Rapids, Mich., was another visitor.

Horticultural Society of Chicago

The Horticultural Society of Chicago held its annual meeting at the Art Institute on Friday, Jan. 14. The election of officers was an important proceeding, and the following were elected: W. E. Kelly, president; W. N. Rudd, first vice-president; Ernst Wienhoeber, second vice-president; August Poehlmann, third vice-president; J. H. Burdett, secretary; N. H. Carpenter, treasurer; trustees for the term of two years, E. A. Kanst, C. A. Samuelson, Geo. Asmus, Geo. Haigh. A committee, consisting of N. H. Carpenter, Mr. Hutchinson and J. C. Vaughan was appointed to secure permanent quarters. The executive committee was instructed to secure a place for a show the coming year. Ex-treasurer Wienhoeber reported that the fund on hand amounted to about \$830.

One of the Brant & Noe Floral Co.'s greenhouses, 38 by 100 ft., collapsed last week under the weight of the snow. The men who were in the house had a narrow escape.

Vaughan's Seed Store has been greatly improved by changes made in the interior. The large show window that was partly enclosed on the inside is now completely of glass, giving much more light, and adding greatly to the appearance of the front of the store.

The coal question was a very grave one with the Hoerber Brothers all last week, and grave fears were entertained as to the outcome, as their supply was about exhausted; but fortune favored them at the last moment, for on Sunday morning the first freight that had passed through Des Plaines in two weeks switched them two car loads of coal and everything is lovely now. The stock from this firm is excellent, and one could not find better Roses than are to be seen in their houses.

The D. D. Johnson Co. is very well satisfied with the results of the reception of their "Evergreen Brand" fertilizer. It is proving a good seller, as everyone is convinced, after a trial, that its qualities are unsurpassed.

The J. G. Mastin Co. has a big supply of the Mastin Automatic Sprayer

ready for shipment, as large sales of them are practically guaranteed.

The John C. Moninger Co. has about completed the large building that has been in the course of construction for some time past, and the same is a great addition to their already extensive factory.

The occasional hauling of large Kroeschell boilers noticed in various parts of the city in the past few weeks indicates that the Kroeschell Brothers Co. is kept busy supplying boilers.

Osa F. Coryell, representative of the Chas. Knopf Floral Co., Richmond, Ind., was visiting among the suburban growers, around Chicago the past week.

Elmer D. Smith of Adrian, Mich., was also a welcome visitor among the trade on Monday. Other visitors were C. G. Anderson, Kenosha, Wis.; Ed. Amerpohl and wife, Janesville, Wis.; and Wm. Dittman, New Castle, Ind.

The Forestry Class of the Chicago Woman's Club, met Friday morning, January 21. Mrs. Ella Peattie delivered an address on different subjects relating to forestry.

The Geo. Wittbold Co. has the decorating of the Coliseum and Armory for the coming automobile show.

A change from Roses and Sweet Peas and other flowers usually carried by bridesmaids, was the baskets of Poinsettias carried at a recent wedding.

Bowling

The Bowling League met last Thursday night, January 13, at Bessinger's Alleys. The following scores were made:

Orchids	vs.	Carnations
2393		2608
Roses	vs.	Violets
2229		2238

Cincinnati

Business during the past week has been quiet. The demand for American Beauty Roses since Xmas has not been very encouraging; other Rosas have sold fairly well, but prices have dropped back to normal conditions and the business has just about been sufficient to use up this class of stock. We are still having dark, gloomy weather, which will retard the blooms somewhat—possibly a good thing, as the demand is still very light. Best American Beauty is still selling at \$3 and \$4 per dozen; Killarney 3 to \$5; Richmond the same, \$5. It is about the limit now for good stock. Carnations are selling at 1 to 3c., according to quality.

On Monday evening, January 17, all members of the Florists' Society who are interested in the bowling are to meet at Wellerts and have a good time.

A letter received a few days since from my old friend, A. L. Aldrich of Orange, Cal.—Mr. Aldrich was formerly in the florist business in Springfield, O.—states that he is very much pleased with California, and calls it God's country. He invested in some land, planted an Orange grove, the total cost of which was about \$3000. Since that time he has been offered \$10,000 for it.

Saturday evening, January 15, a serious accident occurred on the hill leading to College Hill. J. W. Rogers, park superintendent, and his father-in-law, Mr. Meyer, were in an auto going to College Hill. A lot of boys were coasting down this hill, which is about three quarters of a mile long, and going at the rate of a mile a minute. Mr. Rogers drove as near the bank as he possibly could, but the boys on the sled seemed to lose their heads, and crashed into the hind end of Mr. Rogers' machine. Mr. Rogers escaped without a scratch, but Mr. Meyer received a broken leg, and four or five boys are very seriously injured.

J. W. Herdegen of Aurora, Ind. was a caller Saturday. E. G. GILLET.

Evergreen Brand

A New Fertilizer

Specially manufactured for growing FLOWERS, FERNS, PALMS, etc.

It contains all the PLANT FOOD elements necessary to plant growth, and is compounded in proper proportion to get the best results in growing FLOWERS and PLANTS.

It removes Acid from the soil, consequently sweetens sour land and makes it productive.

Now Used by Largest Growers, With Excellent Results

It permanently enriches the soil.

It is all available.

Contains no "filler."

The plants can use it all.

Morton Grove, Ill., Oct. 6th, 1909.

Mr. D. D. Johnson

Dear Sir:-

We have used the 6 cans of Evergreen Brand Flower Fertilize shipped us Sept. 6th and noted remarkable results.

You may increase our second order of 500 to 2000 lbs. and ship soon as possible.

Yours truly,
Poehlmann Bros. Company.

Aug Poehlmann

Odorless and Sanitary

It will annihilate all disease germs; thus it prevents stem rot and other diseases from destroying the plants.

The Price is Low

compared with common Fertilizers or Bone Meal, for when purchasing the EVERGREEN BRAND you get PLANT FOOD, hence eliminating the expense and handling of "filler" or "make weight" material usually found in large quantities in common Fertilizers.

It is immediately soluble in water. Can be used Dry or in Solution.

1 lb. to the 100 Square ft. of Benching

TRY IT. We have arranged to ship small quantities, as follows: Boxes containing 1, 2, 4, 6 or 8 cans each.

Cans contain 12 pounds. Price \$2.00 per can. Terms net cash with order. Full instructions with each shipment.

A HEARTY INVITATION

While the Carnation is up for its An-
nual Review we would esteem it a
favor to hear from those who grow the
plants. Send in notes on your experi-
ence with Carnations in 1909; together
with any suggestions or criticisms you
may have to offer. Do it now. Don't
wait.

The Week's Work

BY
FRITZ BAHR

The Pittsburgh Convention

If There Is Any Chance At All,
Attend It

If you are growing Carnations, even on a small scale, it is of the greatest importance that you should attend the coming convention of the American Carnation Society in Pittsburgh. The flowers shown there may have the special treatment, and been grown under the most favorable conditions and surroundings, such as the smaller grower can't think of giving them; also the flowers may have been selected out of thousands. Yet with all that, the only way to judge any new sort is to compare it side by side with existing varieties. The up-to-date grower will not miss a show such as is to be held at the convention, he can't afford to. We may see a good stock on Carnation nights at the club at home, but what can be more instructive or interesting than to see exhibits from so many different parts of the country. Nowhere else have a lot of us a chance to see the possibilities of certain Carnation varieties than here. On the other hand, other novelties we have had great confidence in may be disappointing to us at the next show, so much of this kind there is a whole lot any of us can learn. Someone has said that the improvement in newer Carnations will not be so noticeable, and that we shall not make as much headway in the future as we have been making, but after all, this is only guess work. I don't see why we should take that view. I look forward to some new phenomenal variety to be brought out by someone we least expect, and in the near future.

Delphiniums and Gaillardias

Good Time to Sow Seed

Among the most widely known of the perennials, both the Larkspur, or Delphinium, as well as the Gaillardias might be mentioned; there is always a call for them, either as cut flowers or in Spring and Fall for the plants. If you are short on stock of either you can sow seed now; by so doing nice plants in 2 1/2 years can be had by the first part of April, by which time they can be planted outdoors. Another good way is to give the strongest a shift into larger pots and keep them growing inside; quite a number of them can be disposed of during the bedding plant season. Don't overlook planting some seed of that grand Delphinium Belladonna. If sown now, you will have flowering plants before the Summer is over. Belladonna is one of the very best of the Larkspurs, is of a fine blue color and an excellent bloomer. In Gaillardias, the Kelway's Hybrids are a grand lot and should be grown. The better known is G. grandiflora, also beautiful, and one of the best perennials, being a constant bloomer. Plants grown from seed sown now will also bloom this Summer. While the Gaillardias are perfectly hardy perennials, the old plants don't seem to do as well when planted out for a number of years. The young stock grown from seed is more vigorous, blooms freer, throws larger flowers and longer stems. I don't know but what this is the case with most of the hardy plants. No matter how they are propagated, whether by seed, cuttings or division, the young stock is superior to old field-grown clumps.

Maurandia Barclaiana

Great Value as a Vase or Basket Plant
This is one of the plants which, if not grown in your own greenhouse, you have trouble in buying on the open market next Spring. The man who uses but little outside of Nitt Geraniums and Vincas for the filling of his window boxes has but little use for small leaved dainty little trailers such as the Maurandias are; but for those who have customers who wish more of an assortment it is of im-

portance. The mistake the average florist makes in growing them is that he sows his seed in March, puts 7 or 10 of the little seedlings in a 3" pot, lets the plants grow into each other on the bench, and when some are wanted in May it is almost impossible to untangle them. In this way the real value of the Maurandia as a vase or basket plant can not be judged. Seed ought to be sown at once. Sow, thinly, for if fresh seed is made use of 95 per cent. will germinate. Transplant the seedlings into flats—when so doing you can put 2 or 3 plants together, not more; when large enough, pot up into 2 1/2's and later into 3's or 3 1/2's. Set the plants along the edge of a bench and don't allow them to get tangled; this is easily prevented by going over them once every week. In this way nice bushy plants in bloom can be had by May, plants 15 inches long, ideal for a window box or hanging basket. We never have enough of them, and it is only a question of room that we don't grow more.

Thunbergia Alata

A Plant Deserving More Attention

This is another valuable plant for the retail grower who has baskets, window boxes or vases to fill where hanging or trailing plants are needed. There are but few combinations where a number of the yellow Thunbergia with the black center, or the white flowering variety, can't be used to good advantage, but the same mistake often made with the Maurandias is also made with the Thunbergias—not sufficient attention is paid to their culture. If only used to fill up, a poorly grown plant might do, but why not grow fewer and better plants? It costs but very little more to do. A 3" or 3 1/2" pot plant of Thunbergia, branches 12" long and from 1 1/2 to 1 5/8 in. flowers, is worth a dozen straggly 2 1/2" pot plants. You can't grow these plants properly when put on pot on a bench. While the main object is to grow as large a plant in as small a pot as possible, to have a Thunbergia at its best it really requires more than a 2 1/2" pot. Let the plants have a place along the edge of the bench where they can hang over. About the end of January is none too early to sow out some seed. A lower temperature than 55° is liable to cause yellow foliage on the plants at a little higher is better. As soon as the seedlings have their first leaves properly developed put them into 2's; this will be about the end of February. They can remain in them for 4 to 5 weeks, when a shift into larger pots is in order. Thunbergia seed when old is useless, and the fresh seed will not grow from bottom heat to germinate. Use a good, rich soil for the Thunbergias, and don't allow red spider, their worst enemy, to disfigure the leaves. A rather moist atmosphere and warm quarters will suit them best.

Nierembergia Gracilis

This Useful Plant Should Be Grown More

This beautiful little flowering plant might also be classed with the Maurandias and Thunbergias, for it is equally as useful as either for the window box or vase. Its fine feathery growth forms a happy contrast against the heavy foliage of the Vinca or the Geranium, the two main factors, usually, in the filling of most of such work. It is a continuous bloomer and its light blue or white single flowers hardly ever interfere with any other colors. More of them should be used by the retail grower. It can't be bought, when in need of it, as easily as some of our other plants used for bedding or window box filling; the best way is to have a good stock on hand. Plants which have been carried over in pots will, when put into a temperature of 55°, soon furnish a lot of good cuttings, which will easily root and quickly make nice material for 2 1/2" pots; or seed may be sown now, which will furnish nice stock by May. As the seedlings are rather slow during the next two months no time should be lost in getting started at once. The plants will do well in almost any soil not too heavy.

Glechoma

The Time to Get the Plants Started.

If you have stock plants of Glechoma, the variegated Ground Ivy, which were kept up to this time in the cold house or outdoors in a frame, it is not too soon

to bring them into warmer quarters; we usually pot them up during August and September into 4" pots. By the end of this month, or the beginning of February, we divide the plants into 6 to 8 small pieces and pot them up separately into 2 1/2's. There will be but little growth noticeable until the end of March, when one can almost see them grow. If plenty of stock is on hand no pinching will be required. The plants will make 20 inches of growth by May and furnish the very best of material for baskets and window boxes. If short on stock the young shoots of the plants will root in a week and 5 or 6 of them, put up into 2 1/2" pots, will make nice stock by Spring. I forgot to mention that the stock which is put into 2 1/2's now will need a shift into 3 or 3 1/2's in about 6 weeks from now. It doesn't pay to use larger pots when the plants are wanted for vase or hanging, but if plants can be disposed of singly in pots, specimens in 4" and 5" pots make a great showing.

Petunias

Those of us who handle bedding stock have a call for Petunias. There are, continuously, new varieties coming out, some of them excellent for bedding and vase work, especially medium sized single sorts. Rosy Morn, with its clear, pink color, is one of them. One of the drawbacks of the Petunias is the coloring some of them have, the blue or purple which we find in most of the pink ones. Rosy Morn is free from that, and it is one of the freest of bloomers and ideal for bedding. Howard's Star comes almost true from seed now, and is another good sort to grow. While there is plenty of time yet to sow either of these, if plants of the double sorts are to be grown from seed, it isn't one bit too early to get started. There is always call for extra strong plants in bloom in 4" and 5" pots during May, and when well grown even the large fringed single varieties make a fine pot plant. As with lots of other plants, the best double seed that is offered by your seed houses, this will give a good percentage of doubles and the balance will be good single ones. For a white one suitable for veranda boxes and vases, the old favorite Snowball is still one of the best, and while, especially when there isn't the best of care taken in watering, Petunias suffer when used in window boxes, we are still using them, particularly when it is the wish of the customer. A one dollar package of double Petunia seed doesn't look much, one thousand of the best, and seeds make but a small pile, but it depends entirely on how careful you are in sowing them out as to what luck you will have—that is if the seed is new.

Propagating

Bouvardias and Hydrangeas

While these two do not require the same treatment, it is time for both to be propagated, if young stock is wanted, with the Hydrangeas especially. From now on the plants expected to be in bloom for Easter and Decoration Day will usually furnish plenty of side shoots or growth from below the flowering stems, just the thing for cuttings. As they come along remove and place into the propagating bench. A little bottom heat will help to root them. In a Carnation house temperature cuttings rooted now will make the right stock for either old culture during the Summer, or where they can be had either way if proper attention is paid to them. The Bouvardias used to be propagated almost entirely by, or rather through root cuttings. For this purpose the roots are cut into pieces, averaging about one inch in length. These are laid in flats, on about one inch of the same material. In this way, when exposed to a gentle bottom heat, almost every piece will produce a little plant, sometimes even two. This method is still practiced where large quantities are grown. Where, however, plenty of stock is on hand and not a great many cuttings are wanted, propagation from soft wooded cuttings made from now on will answer as well. Cut the plants which have been blooming back a little when the young growth is about 2" long, and you will have good cuttings for the sand; they want a little bottom heat and a 55° house.

Violets

Seasonable Hints on Culture

With the Violets, as with all of our other stock we grow indoors, yes! and out of doors as well, don't wait until the plants are diseased or full of insects. There isn't another plant we have indoors which suffers more when allowed to have a few spotted leaves on it than the Violet. In no time the whole bench will be infested so look out for this. You may, during the holiday rush, the overlooked matters, but there is no excuse now. You can't spend time any better than in removing every bad leaf, if it should take every one the plant has got. Don't allow any broken off or decayed leaves to lay about on top or under the benches. Watch the condition of the soil, continuous cultivating will keep it sweet. In zero weather, when heavy firing is necessary, certain places or spots on the bench may dry out sooner than others. Maintain an even temperature, and whatever you do, don't try to raise the temperature in order to get more blooms. I am not talking to the man who has grown Violets for years, but to the beginner. There isn't any time set for propagating, but the end of January is not too early to begin. Use only the very best of stock for this purpose, even a healthy looking cutting from a sick plant is no fit for the purpose. The next great day for Violets is St. Valentine, and then Easter. If the plants are in good shape now they ought to give a good yield for both of these days. Watch the ventilators; whenever possible open them, it will help to keep the stock healthy and the flowers large.

Baltimore

Business has been fairly good since the holidays. There is a sufficient supply of good cut flower stock. Weather conditions have been anything but favorable, and snow, alternating with rain and slush, has been the order for two weeks past. There have been a few very cold and windy days, requiring close attention and extra heavy feeding of boilers.

During the past week Baltimore has seen several society events of considerable magnitude, which required large quantities of first-class cut flowers and decorative plants.

The Assembly Ball, which was held at the Belvedere, was a scene of beauty and gaiety. Five hundred persons were present, the contribution for this event being \$100 for each participant. A committee of five society ladies conceived an idea of converting the ballroom of the Belvedere into a "Garden of Eden." Geo. L. Black, with a corps of assistants, and under the supervision of the committee of ladies, attended to the floral decorations, which consisted of almost everything in choice cut flowers, Palms, greens, etc., with Cedars and Southern Smilax as a background. Many Azaleas, Lilies and Primroses were used. A pleasing contrast and a special feature were four great French baskets of gold, filled with yellow Roses tied with broad yellow ribbons. The general scheme of color, however, was red and white. Many silver baskets filled with red and white Roses and Ferns were suspended from ceilings and arches, and others were placed upon windows and tables. The candle shades were of white and silver, with white Tulips.

Another event of note was the true Maryland dinner given by General and Mrs. John Gill of Baltimore to J. Pierpont Morgan of New York. The decorations of the Gill mansion consisted of choice exotics, Orchids, American Beauty Roses and white Lilies.

John Cook, our rosarian, is still sojourning in the sunny and tropical South; he writes to his friends from time to time and states that his health is much benefited. C. L. S.

Again we are in the clutches of the old time Winter. Snow fell heavily on last Thursday, and by Friday was nearly a foot deep. Our roads were in bad condition and many growers could not get to town until Saturday; but no glut of cut flowers was apparent on the market, as the weather has been very gloomy, with little sunshine, which helped to keep our large output from excess. The death rate has been large and the retailers have been kept exceedingly busy, many designs being called for. Many suppers, balls, and entertainments are on the go, calling for some extra fine decorations. Southern Smilax is used in great quantities.

Our market florists have missed many market days on account of the bad weather, which entails a loss. They are offering in their little glass houses choice cut blooms of Carnations, some bulbous stock, and pans of Cyclamens. Their trade has been fair, most of them disposing of their stock. Prices have been a little high, due to the scarcity of blooms.

Bernheimer Brothers, proprietors of one of our largest department stores, have mailed out their circulars to the public announcing their plant and flower department. They have an up-to-date florist in charge, doing all kinds of work at low prices. They dispose of great quantities of flowers and plants.

Matthias Thau of Govanstown has installed a new model boiler to replace the old boiler that cracked through the center. The accident occurred December 24 at 5 a. m. However, he considers himself lucky in only losing four Ferns, and the weather was extremely cold. He at once made arrangements and in two weeks the new boiler was installed and his large plant is now in fine condition.

Frederick Reitz, Franklinton, is offering to the trade a choice collection of bulbous flowers. Mr. Reitz is one of the largest Dutch bulb growers in the trade here.

Edward Muhle, Mondawmin, has a mixed house of large and healthy Carnations, at present writing cutting heavily.

John T. Willheim, Gardensville, reports that his 'Mum season was a perfect success, he not losing the sale on a single flower. He is a very large grower. 'Mums being one of his specialties.

Albert Fiedler & Co. are sending out a large number of funeral designs made of Galax. They certainly show up well, and are very attractive.

Lohr & Fritze, Athol, are still cutting extra fine Roses, which find ready sale. Their new wagon is completed and makes a daily trip to town.

Isaac H. Moss, Govanstown, exhibited a choice lot of shrubbery at the Maryland Poultry Show, which attracted considerable attention. Samuel Feast & Sons also made a display of Palms and Ferns in the center of the large hall, which was tastefully arranged.

Many of our growers have inspected the new Culin furnace. It has attracted considerable attention and quite a few who have seen it have expressed the opinion that it is favorable to them. One of the points to be considered is the low cost of operating it. It is claimed to save a large percentage of the fuel expenditure. The writer expects to have the furnace thoroughly explained at the next Club meeting.

John Black, of E. Chase st., had charge of the beautiful decorations last week at the Assembly Ball at the Hotel Belvedere. J. L. T.

The Mastin Automatic White-Wash and Spraying Machine is Reliable, Practical and Durable

The tank is made of galvanized sheet steel, and in brass. The pump is of brass throughout, simple and powerful.

The mixing device keeps the contents of the tank well stirred up from start to finish.

When the machine is filled to within six inches of the top, a few strokes of the pump will compress enough air in the tank to produce a continuous mist-like spray for fifteen minutes.

All parts are made to gauge, and may be had for repairs.

Ask your dealer about our Extension Hose, Extension Rods, and the Mastin White-wash Nozzle for Bordeaux mixture.

Sold through Seedsmen, Dealers in Florists' and Poultry Supplies.

12 FOOT SWEET PEAS IN THESE THREE HITCHINGS HOUSES

3 Houses, 150x30—7 foot sides

Hitchings & Company

1170 Broadway

NEW YORK

Sounds like a "Jack and the Beanstalk" story, but it's true.

They are at Baldwin, L. I., and George Schuneman is the man who is growing them.

Planted in July, Mr. Schuneman began cutting the latter part of September. Instead of tearing them out about this time, they are climbing pretty near the ridge, 15½ feet high, and are loaded down with big blooms, and good for several weeks more cutting.

That's one of the things that have been done in light, tight, perfectly ventilated and rightly heated houses.

It paid him to build Hitchings houses—it will pay you.

The Carnation Convention at Pittsburg

The Florists' Exchange issues of January 29, and February 5, will be essentially Carnation Numbers. (See advertisement on editorial page.) Very many of our readers are equally interested with the disseminators in the behavior of all the leading varieties of Carnations on the market, and to these we extend a hearty invitation to send us in for publication a summary of their experience in 1909 and their suggestions for 1910—Write now while the mood is on you.

Southern Notes

We have certainly been having some cold weather; ten degrees above zero is awfully cold for us. The cold has been of such long duration that we have ice for a week at a time. Of course, the sun thaws everything in the day; this is more injurious than a continual freeze. Our plants have not suffered any serious injury, however, as the outdoor stock had begun no Spring growth. Last year many things were killed outright, but it was because the blizzard came in February, after over a month's warm weather.

During the holidays I visited some of the Atlanta growers. They all reported a satisfactory Xmas trade. The stores were especially beautiful. The window decorations of Dahlias were very handsome. The Lorraine Begonias in the window of the Atlanta Floral Co.'s store were well grown. Indeed, it would be hard to decide who had the best.

At Nunally's greenhouses all was in first-class condition. Mr. Reeve, the efficient grower, was very kind to me. I met him several years ago, and each time I visit him, go away more charmed with his personality and friendliness. He certainly attends strictly to his business, as his place will testify. All his

men are well pleased with his management of them. He has a young son about fourteen years old who is following in the footsteps of his sire. This establishment is the only one in Atlanta which grows Orchids. Mr. Reeve seems to succeed with them admirably. He has a fine collection of plants consisting of such varieties as, *Laelia anceps*, *Cattleya Triana* and *Percivaliana*, *Laelia autumnalis*, etc. There were several beautiful specimen plants in bloom. I also saw some lovely blooms at the store. In the Orchid house were some fine *Formosum Lilies*; these promise to do well. There were also some nice *Cyclameas* in this house. In the Palm house were some magnificent *Palms* and *Ferns*, in variety, all showing excellent culture. The strings of *Smilax* and *Asparagus* were of good color. The *Asparagus* had a good crop of seed and Mr. Reeve had already planted a quantity. I saw some magnificent *Poinsettias*, the largest bracts I've ever seen. Mr. Reeve said that they enjoyed an immense sale; all he had were engaged then. The *Easter Lilies* were making satisfactory growth and were free of insect pests; only a few diseased ones had been found. Mr. Reeve's specialties are *Carnations* and *Roses*. While they do not grow such a great quantity, the quality is par excellence. The *Carnations* were the best I ever saw. The plants carried perfect blooms on extra long stems. All the leading varieties are grown. They grow no American Beauty *Roses* at Nunally's; *Richmond* is grown for red. *Killarney* is a favorite here, although I can't see why people should be so enthusiastic about it. *Kaiserin* does well here in Winter. Mr. Reeve had one house in preparation for *Easter*. I never spent two hours more profitably with anyone. More enjoyable than all was Mr. Reeve's reminiscences of his boyhood days in old England. He told me how the people raised flowers there and how saving they were. His love for the mother country is strong and true. We are all one people really. Mr. Reeve spoke of going back to visit the scenes of his youth as his life journey ends. I appreciate Mr. Reeve's kindness to me more than I can tell. We should all be more unselfish and not be so envious and jealous. Let us be more in harmony with the plants we grow and love. The Nunally range consists of about sixteen houses, 200 by 20 ft. They are heated by steam. It's a problem to heat Southern greenhouses. Often the temperature will register between 10° and 20° above zero at sunrise, then by 10 o'clock there will be no need of any heat. There are never two days alike. Of course one's coal bill isn't so great, but the worry is rather expensive. The Japanese *Irises* grown here are truly grand. It seems strange that they are not more generally grown in the South. The culture is remarkably simple. Last Spring when I visited Mr. Reeve they were in full bloom and the sight was truly wonderful. The clumps are immense.

Mr. Barnhart can praise wonderful California but dear old Georgia is good enough for yours truly. We have no unusual things but the skillful man can work wonders with plants even here.

J. C. S.

Schenectady, N. Y.

Local florists are quite encouraged by this month's business; with some it exceeds last January's. Several small dinner parties have added many orders. Receptions and dances are numerous; however flowers are not as much used here for such occasions as in some other cities. Funeral work is holding up in good shape.

B. F. S.

Milwaukee

Business the past week was unusually quiet, which was principally due to the continuous snowstorms which we had, which congested traffic and made it almost impossible to ship flowers out on time, as all express and mail was delayed and local trade was likewise demoralized.

Roses are somewhat off crop and are coming in rather light, and *Carnations* are quite plentiful and at the present writing there is quite a large proportion of them spitting up badly. Split *Carnations* on the market usually affect the price on the better qualities, to a great extent, especially in the light colors, for dealers buy these at reduced rates to put in design work, thus lessening the demand for the fancy grade of stock on the market.

Alex. Klokner is taking a trip to California.

The Carnation Convention at Pittsburg

The Florists' Exchange issues of January 29, and February, 5, will be essentially Carnation Numbers. (See advertisement on editorial page.) Very many of our readers are equally interested with the disseminators in the behavior of all the leading varieties of Carnations on the market, and to these we extend a hearty invitation to send us in for publication a summary of their experience in 1909 and their suggestions for 1910—Write now while the mood is on you.

Washington, D. C.

Peter Bisset, who some weeks ago accepted a position with the Department of Agriculture at Washington, is soon to start out on a 17 weeks' trip, taking in Cuba, Florida and California. This is significant of the high esteem and confidence manifested in that worthy gentleman by the Department, and his services will no doubt as time advances prove a great acquisition to the Government.

William F. Gude has been re-elected to the presidency of the Washington Chamber of Commerce by unanimous vote.

Prof. Charlemagne Koehler, who has been absent from Washington for about eight months, has returned to this city.

An unexpected and very premature glut of Carnations struck Washington during the week, and these flowers were hard to move.

Genial Edw. S. Schmid is always falling into new fields to be conquered, and invariably carries off the laurels. One day last week he decided to lay aside the cares and responsibilities with which he is daily surrounded and seek diversion at a poultry show being held in a small nearby Virginia town. When it became generally known Mr. Schmid was in town, the fond mothers hastily held a conference and decided to prolong the excitement of that memorable day as much as possible by also giving a baby show. They secured the services of one judge, and decided to confer the remaining honors upon their guest Mr. Schmid. Mr. Schmid blushing declined, saying he had judged almost everything from a Japanese dancing mouse to a formidable tarantula, but never officiated at a baby show, and that all babies looked alike to him. The country folk knew no refusal and he was hastily and unanimously elected to his new office. Things went well until the contestants dwindled down to two infants, dressed in pink and blue respectively. The babies were enough alike to be twins, and the gaze of two rather handsome mammas wandered appealingly from the subjects to the judges: all was expectancy. After a whispered consultation it was decided to award the prize to the one in blue. "But what about the one in pink?" said Mr. Schmid feelingly; and thereupon, as the committee had but one remaining prize, that big hearted gentleman began to feel for his pocket, and thus the last two contestants were each satisfied, and Edward S. has written a few lines in his experience book.

The bottom seemed to drop out of things during last week, and especially with Carnations, which are in excess of all demand.

JAS. L. CARREBY.

FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant!

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXIX. NO. 5

NEW YORK AND CHICAGO, JANUARY 29, 1910

One Dollar Per Year

SELECT FERNS

For Fine Store Trade

We offer a grand lot of exceptionally well-grown plants of the different varieties of

NEPHROLEPIS

which will be found one of the best-selling and most profitable plants that florists can handle. Our stock is in unusually fine shape, and we will guarantee it will please the most exacting, as it is exceptionally good value at the prices quoted.

Improved Elegantissima. The finest of all this type. It was introduced by us in 1905. This form of Elegantissima has been greatly improved, and shows no tendency to revert to the Boston, making it the most valuable fern of this type.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8-in., \$12.00 to \$18.00 per dozen—according to size.

Superbissima. Introduced by us in 1908. A very unique and distinct novelty. Its distinguishing characteristics are its dark green foliage and dense growth. Fronds are very heavily imbricated, making them very dense and compact.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8-in., \$12.00 to \$18.00 per dozen—according to size.

Bostoniensis, Piersoni, Whitmani, Scottii—Extra fine plants, 6-in. pots, \$6.00 per dozen; 8-in. plants, \$12.00 per dozen.

Vandegrift & Co., 2 packages plants.

European Notes

The famine in Peas is bringing to light supplies from the uttermost parts of the earth; for some of these we are truly grateful as they enable us to fill binding orders without trenching quite so deeply on our stock seed. This will also be the means of helping to sow a sufficient acreage to fill contract orders already booked, but up to the time of writing no more contracts can be accepted.

The first sowings of early Peas should be made at the close of the present month, but there is no possibility of any January sowings this year, for during the past six weeks we have not had one thoroughly dry day, and, if it should cease raining at once it would be fully three weeks before we could work some of our best Pea land.

The conditions set out in last week's notes respecting the late crops of Radish and Mangel still continue and the blizzard from your side, on which we counted for relief, simply furnished a few hours of dry frost and was then

RAWSON'S RENOWNED SPECIALTIES

FOR FLORISTS

DAHLIAS

To clear a large surplus, we give Florists the first opportunity to purchase some of our latest Dahlias at remarkably low prices. The following list is only an extract from Rawson's florists' catalogue.

Cactus Dahlias

	Per 10	100
Alfred Vasey, pink	\$0.75	\$6.00
Alpha, white, striped crimson	1.00	8.00
Ambassador, pure white	1.00	8.00
Amos Perry, scarlet	1.00	9.00
Antelope, yellow	.75	6.00
Aschenbroedel, pink	.90	7.00
Blütenregen, scarlet	.75	6.00
Bornemann's Liebling, pink	1.00	9.00
Brantlinger, pink	1.00	9.00
Charm, pink	1.00	12.00
Citizen, maroon	1.20	10.00
Clara G. Stredwick, pink	.85	7.00
Comet, pink, striped red	.75	6.00
Country Girl, golden	1.20	10.00
Crayfish, scarlet	1.00	9.00
Crepuscle, orange yellow	1.00	9.00
Dainty, yellow and pink	1.00	9.00
Dus Marchen, pink	1.50	12.00
Delicate, blush	1.00	9.00
Die Unschuld, cream	1.20	10.00
Edith Groom, white	.75	6.00
Else, salmon pink, suffused yellow	1.00	9.00
Epopee, crimson	1.00	9.00
Fernia, soft pink	1.20	10.00
F. H. Chapman, yellow and orange	1.00	9.00

FLOWER SEEDS

SALVIA SPLENDENS

	1/2 oz.	Oz.
Grandiflora	\$0.25	\$1.50
The best tall Salvia in the market.		
Compacta	.40	2.60
Bonfire	.40	2.60
Hardly any foliage, but masses of flowers.		
Lord Fauntleroy, very dwarf.	.75	4.00
Maroon Prince, deep maroon.	.75	5.00
Fire Ball, most intensely colored.	.75	6.00
ored		
Silver Spot, leaves spotted, very attractive.	.25	1.60
Zurich. The best salvia yet introduced.		
Plants grow very compact, show little foliage and bear heavy flower spikes, which are thickly laden with bright scarlet flowers. Flowers early in July and remain in bloom with later varieties.		
Patens. (Blue Salvia). 1-16 oz. \$1.00.		
Salvia Splendens. King of Carpets. The best dwarf bedding Salvia on the market today, out rivaling even "Zurich". The plants branch from the bottom and to such extent that the main stem is never visible. All side branches drop completely to the ground, making the whole plant a perfect half ball of fire. The plant grows but 15 inches high and flowers even earlier than "Zurich". 1/2 oz. \$1.00, oz. \$6.00.		
The veteran Salvia grower, Mr. F. Bedman, says: "I have been growing 'King Carpets' for many years, and I consider the dry weather that we have had, and I consider it one of the grandest dwarf salvias that I ever saw."		

AGERATUM

Extensively raised as a pot plant and used for edging.		
Laseurii	1/4 oz. 20c.	\$0.60
Mexicanum		.16
Album. Large flowering white		.26
Blue Perfection		.30
Dwarf Imperial White		.25
Dwarf Imperial Blue		.25
Dwarf Swanling Blue		.30
Dwarf Little Dorrit		.26
Dwarf Little Blue Star, 1-16 oz. 75c.		

ANTIRRHINUM

A most valuable plant for the cut flower market, easily grown and very profitable; we have been careful to select but such colors as are ready sellers.		
RAWSON'S "TADOL" Giant. This strain grows three to four feet high and is covered about two-thirds with gigantic flowers of grace and beauty. 1/4 oz. Oz.		
Finest Mixed	\$0.25	\$0.40
Whits		
Scarlet	.20	.60
Yellow	.20	.60
Dark Rose	.20	.60
Delicate Pink	.20	.60
Coral Red	.25	.75

ASTERS

Rawson's New Midsummer Aster		
The colors are true and hardly any open-centered flowers among them.		
1/2 oz. Oz.		
Pure White	\$0.60	\$2.00
Delicate Shell Pink	.60	2.00
Royal Purple	.60	2.00
True Lavender	.60	2.00
Bright Rose	.60	2.00
Finest Mixed	.60	1.60
Aster, Rawson's Late Branching. Flowers are very large in size and borne on long stiff stems. It is one of the best and most popular varieties for late flower markets.	1/4 oz. Oz.	
Finest Mixed	\$0.25	\$0.76
Crimson	.30	1.00
Dark Blue	.30	1.00
Light Blue	.30	1.00
Rose Pink	.30	1.00
Shell Pink	.30	1.00
Scarlet	.30	1.00
White	.30	1.00
Dawn at Day. (Novelty, 1908). The earliest flowering Aster in existence. Fine white, perfect in form and growth, long branching stems and flowers; often three weeks ahead of Queen of the Market. It is of branching habit and very full and if freely cut will continue to bear blooms until late in fall. 1/4 oz. 50c., oz. \$3.00.		
Rawson's Daybreak. This variety must not be compared with the strain offered elsewhere and a trial will convince the ever-so-critical of its superiority. 1/4 oz. 40c., oz. \$2.50.		
Rawson's Purity. (Pure white.) Of the same type as Daybreak, differing only in color, which is a pure glistening white. Just as free-flowering and symmetrical as Daybreak and undoubtedly unsurpassed as a white bedding variety. 1/4 oz. 60c., oz. \$3.00.		
Rawson's Queen of the Market Aster. The best early Aster for the florist, quality being very much improved.		
Finest Mixed, 1/4 oz. 15c., oz. 60c.		
Crimson, Dark Blue, Light Blue, Rose, Peach Blossom, White. 1/4 oz. 20c., oz. 60c.		

promptly boiled out, and found a watery grave.

In western France, where the same conditions prevail, the growers are rapidly sinking into a state of almost sullen depression and no amount of persuasion will induce them to take on Radishes again, except at prohibitive figures. This feeling is so strong that we shall be compelled to develop the culture in some other parts of the country, but both for the grower's sake and our own we trust this will not be necessary. The sandy lands in the Loire Valley have been the means of providing us with the extra early varieties which are so highly esteemed; the growers there thoroughly understand, and have often profited by the culture, and, as a rule, the sunny climate for which that part of the world is famous usually enables the growers to make early deliveries.

The keen competition of England, Germany and Holland has no doubt kept prices far below a profitable level, and as price counts for very much in these days there is very little hope of any improvement.

The missing parcels of Beet are still coming to light, and the sources through which they are being widely offered occasions no little surprise. As one or two of the firms in question claim to have been inundated with orders for this article it is singular, to say the least, that they should be so heavily overstocked.

In market seeds the principal interest is centered in Tares. Supplies are now beginning to come forward and the samples thus far offered are really very good. Prices have advanced fully 30 cents per 100 pounds during the past two weeks, mainly as the result of enquiries from your side and the practical failure of the crop in western Europe. Oats, Barley and other seed grain are very firm in price and will bring a splendid profit to the prudently lucky few.

Flower seeds move somewhat slowly in more senses than one just now, but as trade is daily improving we rely upon an average demand.

EUROPEAN SEEDS.

American Notes

Trade Starts a Little

Trade has started with our seedsmen quite a little; and every day now will add to its volume until we find ourselves once more really at the beginning of another seed selling season. Catalogs are fast being distributed, and another couple of weeks will find most of the important ones in customers' hands; it is the same this year as it always turns out to be—Feb. 1 arrives before very many seeds are sold. Of course, for a month past florists' flower seeds have been selling, and many advance wholesale orders have been placed; but no large amount of trade has yet started. It is going, as all along expected, to be a year of many seed shortages in both flower and vegetable seeds; so many items are in more or less limited supply that early purchases cannot be too strongly urged upon every dealer, and planter as well—the late comers will find seed stocks more depleted than in many years. Every member of the trade is putting things in final shape for the rush so soon to start; at best the Spring seed selling season is a short one and every moment must be used to advantage.

The "Non-Guarantee" of Seeds

It will be remembered that one short year ago our seedsmen were being taken to task most severely, by certain very prominent members of the agricultural press for not being willing to warrant the seeds they sell. So much and so strong did the agitation of this subject become, that the entire trade were very greatly disturbed by it all. In fact, it was very plainly insinuated that our seedsmen hid behind their "non-guarantee" clause in cases where the planter would otherwise be entitled and justified in holding his seedsmen responsible for a poor crop. Time works wonders. A year ago there certainly seemed to be much dissatisfaction with out seedsmen's methods of selling seeds, and a fixed determination in certain quarters to force the seed trade to practically warrant the seeds they sell. This feeling has very much modified itself, if it has not entirely passed away; and once again it would seem to be generally recognized that our seedsmen cannot deliver to a planter any better seeds than Nature produces. When once every user of seeds fully imbibes the true fact that the American seed trade is continually striving to deliver to customers the best that can be produced in the entire line of seeds, no word of criticism will again be

heard against the "non-guarantee" clause as so long used in seed selling.

Gerbera Jamesonii Hybrida

Among the flower seed novelties being offered this season, none have been given more prominence, both as regards illustration and text description, than has this new "Scarlet Daisy, or Marguerite of the Cape." The trade generally feel that it will be an excellent seller; the retail rate is 50 cents per packet. This new half-hardy perennial, by artificial hybridizing, has given a great number of varieties, varying in color from pure white, through shades of yellow, pale red and salmon to orange rose, cherry red, scarlet and rich crimson or violet red. Sometimes the disc is of the same shade as the ray florets and again of a varying color. The Marguerite-like blooms are very large, borne on long and strong peduncles, and as a cut flower last a long time, furnishing most excellent material for bouquet work

or any decorative purpose. Such very briefly is this novelty, and a large sale seems destined for it.

Your Advertising

Do not neglect your advertising. There are no more lucrative months in the year for the seedsmen in this direction than from now on; and if ever large spaces were justified they most certainly are now. Select your list of mediums carefully in accordance with the particular line of trade you are striving for, and then use what spaces for your advertisements would seem to be judicious. The day has long since passed when any successful seed business can get along without advertising.

New York Seed Trade

At Boddington's things are getting very busy; the past week they received a carload of Cannas and Caladiums. Mr. Buiyard has gone to Pittsburgh, Pa., to attend the annual convention of the American Carnation Society. This firm, the past week, shipped one-half ton of Sweet Peas to England. As with the rest of the trade, they are quite exercised over the short crops of seeds and are urging their customers to place their orders just as early as possible.

The Aphine Mfg. Co. held a demonstration on their new insecticide "Aphine" at Boston last Saturday which was largely attended and a marked success in every particular. Martin G. Ebel, manager of this company, is arranging a similar test to be held in the near future at Philadelphia. It is being clearly demonstrated that Aphine is an insecticide, that is fast becoming very popular.

The Stump & Walter Co. are making a very attractive window display of poultry supplies at their Barclay St. store. This firm does a large business in this direction; in fact, they issue a special catalog for this line of goods.

J. M. Thorburn & Co. have this week also an attractive window display, Peas and Beans in flat baskets lined with green making up the same.

Charles Lochner of the Yokohama Nursery Co., who has been confined in the Norwegian Hospital at Brooklyn since Christmas with a broken leg, continues steadily on the road to recovery.

CANNA ROOTS—CANNA ROOTS

Strong home grown, two or three eyes each, in perfect condition and strictly true to name.

HON. BENJ. F. HOWELL. 6 ft. The best yet. Similar to King Humbert in both flower and foliage but better. The color is more brilliant and the flowers are larger—foliage equally good in rich bronze color and make up. Now first offered.	100	1000
ALLEMANIA. 6 ft. Giant flowered; scarlet-salmon, edged yellow.	2.00	
BLACK BEAUTY. 6 ft. Abundant, rich, glistening, bronzy-purple plum foliage.	5.00	
COMTE DE BOUCLAR. 4 1/2 ft. Bright yellow and fine.	2.50	20.00
CRIMSON REDDER. 3 ft. Bright crimson; very free and valuable.	2.50	20.00
DAVID HARUM. 4 ft. Bronze foliage; bright vermilion flowers.	2.50	20.00
EMILE WIELAND. 6 ft. Perhaps yields the most brilliant display of any Canna as yet produced. Vivid orange-scarlet flowers; extra fine Musa-like foliage.	5.00	
FLORENCE VAUGHAN. 6 ft. Yellow much dotted with orange-scarlet.	2.50	20.00
KING HUMBERT. 5 ft. Bronze foliage; enormous trusses of salmon-scarlet flowers. A grand variety.	3.50	30.00
LITTLE GEM. 18 in. Orange scarlet gilt-edged flowers.	5.00	
MRS. KATE GRAY. 5 ft. Orchids flowered; orange-scarlet with yellow throat.	2.50	
MRS. WM. F. KASTING. 3 ft. Clear vivid crimson; early, free.	3.50	
PENNSYLVANIA. 6 ft. Orchid-flowered; orange-scarlet flowers.	2.50	
PRES. CAINOT. 4 ft. Bronze-leaved; orange-scarlet flowers.	2.00	18.00
PRES. McKinley. 3 ft. Brilliant crimson with scarlet shadings.	3.00	
SOUV. D'ANTOINE CROZY. 3 1/2 ft. Bright crimson edged yellow.	2.50	20.00
WEST GROVE. 3 ft. Large rich coral pink flowers.	3.00	
WYOMING. 6 ft. Orchid-flowered; bronze-purple foliage, orange flowers.	4.00	
YELLOW CROZY. 3 1/2 ft. Pure yellow flowers; the best dwarf yellow.	3.00	
ALL COLORS MIXED. Fine named varieties without labels.	1.50	12.00

500 of a variety at 1000 rates. Packed free for cash with order.

California Seed and Bulb Notes

I noticed on Jan. 5 new Daffodils for sale, grown in the open air. They are Ard Righa from Mrs. Kersey of Haywards who holds the records in that line. Mrs. Kersey took to flower growing by chance, but having natural aptitude and a very early location, about twenty miles from San Francisco, has for years had the early market for Daffodils. By the way, there are hundreds of thousands of the variety Ard Righ about the Bay, all from one original planting years ago. It seems perfectly adapted to the climate.

While the flower trade of this city is moving to the shopping center, the seed and plant trade is establishing itself on Market st. near the ferries. A wise choice, too, for Market st. is the path that all take who travel in northern California, and the firms who feared they could not pay the high rents on that great thoroughfare and that the steady stream of commuters leaves lots of money with them. They are coming to see too, that attractive window shows of cut flowers or striking plants are the best of advertisers with people who want to be shown.

The latest firm to move to Market at. is the California Seed Store, which represents the old nursery of F. Lude-mann (one of the oldest establishments in California), as well as doing a general seed trade.

Dutch bulbs, and particularly late Tulips, are growing rapidly in popularity, with a good second in the Spanish Irises which simply luxuriate in the Bay region.

To those who do not know California I would say that by the "Bay Region," we mean that large region lying along San Francisco Bay and its arms, fully 125 miles long, with a climate tempered by sea winds and fogs. It is a wonderful country for flowers and with a minimum temperature about the same as southern California, but more humid.

I wonder if The Florists' Exchange readers have kept in touch with the bulb growing experiments at Bellingham, Washington. For years several growers, among others Mr. Gibbs and Mr. Smith, have experimented with Tulips and Hyacinths. They have really grown excellent stock, fully as good as can be imported. A year ago, the Department of Agriculture chose Bellingham Bay as the best locality in America for the purpose, and started a bulb garden in which to work out the practical problem. Without any question they have the soil and the climate, and I think, without any question, they will produce as good bulbs as can be bought, especially since as high skill is employed in their care as Holland can give.

Speaking from the standpoint of one who has had a very fair amount of practical experience in this same line, I would say that the point that cannot at this time be surmounted in America is that we must pay more for unskilled labor than the Hollander does for skilled. And the other point that in less than carload lots the freight across the continent is very nearly as much as the ocean freight plus duty plus all other charges. The Pacific Coast will grow the bulbs of America some day, but it will be when transportation is much lower and wages less.

The great seed firm of C. C. Morse & Co., the largest growers in the West, have chosen new nursery grounds in Alameda County, south of San Leandro. The land is a rich black loam and lies between the Western and Central Pacific railroads, and the firm will have stations on each. They have also decided to establish great seed farms on the reclaimed land in what is known as the Islands, between the Sacramento and San Joaquin rivers. It is a wonderfully rich region and simply cannot be beaten either in fertility or climate, for this purpose, but has in the past suffered severely from floods breaking down the

levees. We presume that Morse & Co. are using extra safeguards in this line and, if they succeed, it is safe to say that that region will soon be the seed center of California.

Dr. Franceschi of Santa Barbara has left the Exotic Gardens, and his daughter has now started the Montari Rose Nurseries in the same town; her first catalog is in my hands. To Dr. Franceschi all California owes a debt of gratitude, for, without doubt, he has introduced more valuable new plants and trees than the next most worthy four; a walk in the old Exotic Gardens, which he founded, is a great treat. We hope that he will live to do much more valuable work of the same sort.

With the new U. S. Station at Chico, now under the superintendence of Dr. Van Fleet, well known in connection with the Rural New Yorker station at Little Silver, N. J., with the several stations of the University of California, with such private stations as Dr. Franceschi has established, and the great estate of Henry Huntington at Los Angeles, California is certain to gather to itself the best from all over the world.

CARL PURDY.

Transparent Envelopes for Seed Packets

Mr. Chas. N. Page, of the Iowa Seed Co. of Des Moines, Iowa, in writing us he has been informed that the P. O. Department will permit the mailing of seeds in manilla and other opaque envelopes until July 1 next, thus permitting seedsmen to make use of stock on hand, says further: "This will be welcome news to the trade and I hope that, before that date, the P. O. Department will change their ruling in such a way that it will not interfere with the future mailing of seeds put up in the ordinary way. There have been no complaints of seed dealers ever taking advantage of this privilege by sending out any first-class mail matter in seed packets. There is, therefore, no legitimate reason for making a special ruling against them."

New Giant Runner Bean Count Zeppelin

In its seed trade notes of Dec. 18 last, page 938, 'The Florists' Exchange published an extract from "Der Handels-gartner," headed "A New Pole Bean," in which credit was given to the firm of Chr. Mohrenweiser of Altenweddingen, Germany, for a novelty which had been named by them Mohrenweiser's Perplex. We are now in receipt of a communication from F. C. Heinemann of Erfurt, Germany, in which that gentleman says: "I beg to inform you that this variety (Perplex) is synonymous to the Zeppelin Runner Bean introduced by me last season, 1908-1909."

Mr. Heinemann forwards us, in support of his claim, two catalogs of the Mohrenweiser firm—that of 1908-1909 showing an illustration of a Bean under the title "Pole Bean Zeppelin," while in the catalog of the same firm for 1909-1910 the same illustration is shown, but the Bean is there named "Pole Bean Perplex," the cuts in both instances in

these two catalogs being almost facsimiles of a portion of an illustration which Mr. Heinemann showed in his Special Seed Trade Offer of Novelties for 1909, in connection with the introduction and description of his new Giant Runner Bean Count Zeppelin.

Mr. Heinemann further encloses a report made by the Royal Hort. Society of Great Britain in September, 1909, relating to his Bean, as follows: "Count Zeppelin is a novelty to us, longer and almost as broad as any Scarlet Runner; it is somewhat crooked in form and has the appearance of a Bean long past its best, but this is deceptive, and several of the committee reported that they had cooked it and found it really first rate. Whether it will ever become popular for market is questionable, but those who had tried it, strongly recommended it for trial, as it produces an immense crop."

Potato Cutter and Planter

Seedsmen will be interested in learning that a Potato cutter and planter has been invented by Dr. Mark D. Williams and Ernest Brown of Middleport, N. Y., which promises to make a material saving of labor to the farmer who is engaged extensively in Potato raising. The machine will be drawn by two horses and will cut and plant Potatoes as fast as the horses can walk without making any skips. The Potatoes will be cut from end to end, thus dividing the seed end, and will plant at any intervals the operator wishes to set it. One or two Potatoes or pieces of Potatoes can be planted in a hill, this being optional with the operator. Dr. Williams, who is one of the best known veterinarians in the State, has always taken an interest in the development of agriculture and particularly of horticulture. He is a graduate of the National Veterinary College of Washington, D. C. with special work at Cornell University. Mr. Williams' standing as a veterinary surgeon is evidenced by the fact that he has been president of the Niagara and Orleans County Veterinary Medical Society; for three years he was secretary of the Niagara Country Farmers' Club and for a number of years has been one of the speakers at the various State Farmers' Institutes. He is a member of numerous stock and poultry societies and has bred and exhibited animals from the horse to the pigeon.

An Important Decision to Seedsmen

DES MOINES, IOWA.—The Clover seed lawsuit which we have been having, in which A. A. Geil was suing the Iowa Seed Co. for \$1500 damages on account of having received Mammoth Clover, when he claims to have ordered Medium Red Clover, was decided Jan. 19, after a long and hard fought suit. The Judge took the case away from the jury and the decision was in favor of the Iowa Seed Co. on every point, thus upholding the disclaimer.

CHAS. N. PAGE.

[In our next issue we will give the points made by the Judge in rendering his decision.]

Pinus sylvestris Time was when the Scotch Pine, *Pinus sylvestris*, was far more common in our collections than it is today, judging from the many large trees on old estates. It is not that this Pine is less worthy than it was, but there are now so many other to select from, species of our own country and Japan, that there is not room for so many of a single kind as there used to be. There is no Pine today just of the character of the Scotch, hence its usefulness to the planter is by no means over. It is of a bluish green tint when young, and of a bushy habit of growth all its own, requiring less pruning to make it of good shape than some others. As the Scotch Pine advances in age its bark takes on a red color, a decided attraction to it, and well distinguishing it from any other Pine.

An avenue of old trees of this Pine is a great attraction, because of this red-colored bark.

In former days this Pine used to be deemed hard to transplant, but this was when the old way of digging and loading trees on wagons, without due protection to the roots, was the practice. No Pine, whether Scotch or any other one, will survive such treatment. See that its roots are preserved in digging, that they are kept damp all the time until replanted, and then well watered, and the Scotch Pine will transplant as safely as any other kind.

Owing to its sturdy character it is an excellent tree to set to form a windbreak; and its use for forestry purposes is well known in Europe as it is beginning to be here.

Hardy Yuccas Until one gets together a collection of Yuccas he has no idea of the number of species and varieties there are that are hardy. There are so many varieties of the most common one, *filamentosa*, that perhaps a dozen in all could be got together, and, speaking for the vicinity of New York City, all of this type are hardy, as well as the Colorado one, *glauca*, and the southern one, *gloriosa*, and its variety, *recurva*. The two Pacific States sorts, *Whipplei* and *baccata*, have not stood our Winters, but perhaps if strong roots were set they might, or at least grow again from the root, as the *Y. aloifolia* will, the top getting killed, but the plant growing again from its root. *Filamentosa* has a curious variety, of slender growth, known in collections as *pendulifolia*. It pushes up a slender flower stalk of a purplish color, the flowers being white, as all are, but rather smaller than the type. The variety *rigida*, has but few filaments, such as distinguish the typical *filamentosa*.

The *gloriosa*, *recurva* and *glauca*, all make trunks in time, slowly, especially the *glauca*, but even the latter kind gets up from the ground in time to become arboreal to some degree. This, by the way, is the one so long known under the name of *angustifolia*. It is of slender growth throughout, and it flowers the first of all, in June.

Gloriosa, when planted in a warm situation, flowers in August, but in colder places not until later, sometimes in October, so late indeed that early freezings have been known to catch the flowers. Whether the Europeans have a different variety or not remains to be proved; it would seem so when the gardening magazines give reports of *gloriosa* in flower in July, as they do, and this, too, in a climate not nearly as hot as our own in Summer.

Growing the Eucalyptus

Replying privately recently to one who wrote me concerning growing Eucalyptus trees for profit, which he desired to do, it impressed me how misleading is much of what appears in the daily papers concerning this tree.

Every one should recollect that these trees are from Australia, and that there are but few places in our country where the Winters are mild enough to permit of their growth. Southern California and sections of Arizona and Florida are almost the only locations where they would thrive.

In California, in the southern part, they do well, for the degree or two of frost some portions may get at times does not hurt the Eucalyptus, for the reason that on account of the hot, rainless Summers, the wood ripens so hard that a little frost does no harm. The degrees of frost they endure there would kill the trees in Florida, for there the climate causes a rank and late growth, and the soft wood thus made is easily hurt by frost.

What the public press says of the value of the

late Autumn as it then is beneficial in the way of keeping the soil from freezing and thawing, keeping frost from the roots and supplying food for the benefit of the plant the season following. It is true, as sometimes said, that when growing wild they get no manure yet they flourish, but the same is true of every wild plant, yet how we manure our cultivated trees and how they flourish under the treatment!

Regarding peaty soil, there is no need of it at all, and it is never thought necessary by those who have grown them otherwise. Light loam is excellent for them, and if this is not at hand heavier soil well mixed with sand is good for the plants. Forest leaves bedded among the plants in Autumn and let rot undisturbed is excellent for them, mingling with the heavier soil to great advantage.

When set near buildings Rhododendrons will sometimes become unsatisfactory, because of lime in the soil washed from the walls or left in the ground by builders. Old soil where buildings are should be dug out and new take its place, and no need at all for it to be peat; get top soil from an old meadow and it alone will grow good Rhododendrons.

Two Hardy Broad-Leaved Evergreens In a private letter which the writer received recently the question was asked whether the *Olea fragrans* had ever been tested for hardiness in Philadelphia, as he had found it thriving well outdoors in many parts in States south of Philadelphia. The writer does not know of any tests of the kind, but it has been so many years grown only in conservatories hereabouts that it is more than likely it has been so tested and found to be lacking in hardy character. There are not many of the broad-leaved evergreens of Japan and China that will survive our Winters unprotected, while most all of them will endure some freezing. The *Photinia serrulata*, which the same correspondent mentions, is hardy here when in a fairly sheltered place, and it is a handsome evergreen, having dark glossy leaves, and heads of white flowers early in Spring. A feature of its growth is the dark red color of its terminal buds. Another feature, and not such a good one, is its hurry to start growing in Spring, pushing forth its young shoots sometimes so early that late frosts catch them, and sometimes the flowers suffer in the same way.

Hemlock Hedges In the line of evergreen hedges of a coniferous character the Hemlock Spruce is still looked on as being as good as anything that could be named. In its young state it is beautiful and satisfactory in every way, and with care in pruning it continues so even after years have passed. There is much depends on its being well pruned. It needs shearing twice a year, not alone to keep it in shape but also that it may produce many young shoots. When let go with little pruning when young it runs to long shoots, losing its lower foliage. When this occurs it cannot be kept to a moderate height, because if pruned below its live foliage the bare stems will not break afresh, and these become bare patches which would not be there were the pruning properly done. The little twigs which follow frequent prunings retain their foliage a year or two, in this way keeping a green front even after many years have passed.

The Hemlock, together with the Norway Spruce and the Arborvitae are still the three evergreens more used than any others, time proving them the most serviceable of all sorts that have been tried. The several *Retinosporas* have been tried, but do not seem as lasting as those already mentioned, not appearing to stand shearing as well as a hedge plant should.

Sowing Clematis paniculata Seed There is a difference in the length of time certain kinds of Clematis seeds require to germinate; some of them will show signs of sprouting in a few weeks after sowing, while others lie dormant for months. The popular *C. paniculata* is one that often puzzles those who sow it, because of its odd behavior in the way of sprouting. When kept dry through the Winter and sown in beds outdoors in Spring, there is a succession of seedlings appearing above ground the whole season through. Spring will see a few appear, Summer, more, and by the time Autumn comes practically every seed will have appeared to have germinated. The same thing holds good with the native one, *C. Virginiana*, and the European one, *C. Vitalba*, while with those of the Jackmanni type less time for development is required.

Those who have *C. paniculata* seed still on hand should mix it now with sifted sand, the sand to be slightly moist, then when Spring opens sow it immediately outdoors, in narrow beds. In the meantime the mixed seed and sand should be kept in a cold place, so that fungus will not start among it, which would likely occur were it kept in a warm place. The popularity of this Clematis increases as time goes by. It is such an admirable vine for every purpose a vine could be wished for, beautiful foliage, a bushy, fast grower, great profusion of flowers, and of delightful odor. And when its flowers are over its fluffy seeds, in great clusters, are as pretty, some think, as the flowers, and as these heads of seeds last until freezing weather comes, the flowers appearing in August, there is a continuous display for nearly or quite three months.

Pinus Sylvestris Scotch Pine

Eucalyptus wood and its rapid growth is all right. As a rule, fast growing trees do not have such durable wood as slower ones, but it is not so with the Eucalyptus. To show how fast they grow, the writer several times raised the Eucalyptus globulus from seed sown in March. The seedlings were potted when an inch or two high and, in May, were set out in nursery rows. By late October they had made growth of from 6 to 8 feet tall, and were still in vigorous growth when frosts put an end to it.

The name, fever tree, has been given them because of their usefulness in draining malarious swamps. They do this by absorbing moisture from the ground, the roots being hard pressed to supply the leaves and growth the trees make. The drying of the ground prevents the breeding of mosquitoes, rendering places healthful which before were not. All rapid growing trees have the same power of reclamation, but as there are but few of as rapid a growth as the Eucalyptus, or possessing such valuable timber, it is easily understood why it is such a favorite tree in frostless places.

Manuring Rhododendrons

Referring to the manuring of Rhododendrons mentioned by "Inquirer" in the EXCHANGE of Jan. 8 last, we never hesitate to recommend it for these plants as being a great help to them, especially in the way of producing large and beautiful green leaves. It is best applied in

"FLOWER OF FAIRFIELD"

THE "EVERBLOOMING CRIMSON RAMBLER"

The best Climbing Rose in the market, flowering during the whole Summer in large clusters of finest crimson color.
Price for first rate plants with 3 to 5 shoots, open ground grown, \$12.50 per 10", \$12.00 per 1000.
Extra strong plants, from 5 and more branches at \$18.00 per 100.

A. T. DE LA MARE PRINTING & PUBLISHING CO. Ltd. 2 to 8 Duane Street, New York

Catalogs Received

A. T. COOK, Hyde Park, N. Y.—General Retail Catalog of Vegetable and Flower Seeds, Plants, Bulbs, Novelties, etc. Particular attention is drawn in this list to Cook's hybridized Potato Seed, of which he makes a specialty.

MOORE SEED COMPANY, Philadelphia, Pa.—Wholesale Price List of Seeds for Market Gardeners and Florists. Heavily illustrated catalog of 62 pages and covers, describing particularly all the stocks mentioned in its cover title as being used by the market gardener and florist.

BENJAMIN HAMMOND, Fishkill-on-Hudson, N. Y.—Trade List of Hammond's Slug Shot Works, Insecticides and Fungicides. Various Specialties of this well-known manufacturer are catalogue and priced, including Hammond's well-known Slug Shot, Grape Dust, Copper Solution, French Bordeaux Mixture, Horticum, Thrip Juice, Sward Food and other preparations of value to the plant trade.

ARCHIAS' SEED STORE, Sedalia, Mo.—27th Year of Archias' Garden Annual for 1910.—This catalog has a very complete list of desirable stocks in Vegetables, Garden Flowers, Flower Seeds, Gardeners' and Florists' Sundries, Poultry Supplies, of which it gives an extensive listing, Insecticides, Farming Implements and Garden Tools. Considerable attention is paid to a Goldfish Department and Canary Birds. The front cover page shows in a panel a collection of Panies in color, the back cover a panel of assorted vegetables, also in color.

LEONARD SEED COMPANY, Chicago, Ill.—Descriptive Catalog, 1910. This, we note, is the company's 25th year, the business having been established in 1884 by Mr. S. F. Leonard who is still at the head of the firm. The catalog proper is a very representative of a large and diverse seed trade industry and lists all stock desirable for that business. A feature of the book is the views of the several stores in Chicago occupied by the firm, and the pictures showing crops growing in their various trial grounds. Additionally, much attention is given to Miscellaneous Grains and Forage Plants, Field Corn, Grass Seeds and Grass Mixtures. Flower Seeds and Bulbs are catalogued and the book of 104 pages is profusely illustrated.

VICK & HILL COMPANY, Rochester, N. Y.—Catalog of High Grade Aster Seed for Spring of 1910. This listing includes the V. & H. Co. Daybreak, Saxette which consists of daybreak, purity, the V. & H. Co. Lavender Daybreak, Salmon King, Lemon Drop and Rosy Morn, the last three being novelties. A full listing of Vick's Late Branching Asters, the "Money Makers" is given which includes in its colors, White, Rose, Pink, Crimson, Dark Violet, Lavender and Purple. Vick's Early Branching is a distinct advance in the Branching class, coming in about two weeks earlier than the Late Branching sorts. In addition, there is a list of Upright Growing Asters of the latest and best sorts, including as Novelties, Vick & Hill Co's Splendor, Crimson Giant, Rose Giant and Upright Purple. Other standard varieties of Asters listed are the Improved Semple's Pink Branching, Hohenzollern and Truffaut's Peony Flowered sorts.

ROYAL PALM NURSERIES, Reasoner Bros., Oneco, Fla.—This catalog celebrates the 27th year since the establishment of the Royal Palm Nurseries, which, as may be inferred from the title, is distinctly a Southern institution and headquarters particularly for the fruits, flowers and other florists' stocks of that climate. Among the contents we note a careful listing of Tropical fruit plants and trees, Semi-Tropical and Temperate fruit trees and plants, Economical, Medicinal and Useful trees and plants, Bamboos and Grasses, Aquatics, Conifers, Palms and Cycads, a very full department of Ferns and Selaginellas, Foliage and Decorative plants, Tropical flowering plants and shrubs, Hardy and Half-hardy flowering plants and shrubs, Tropical and Sub-Tropical vines and creepers, Hardy and Half-Hardy vines and creepers, Tuberoses, Bulbous and Herbaceous plants, Tropical, Hardy and Half-Hardy shade trees, Succulents and Epiphytes. A useful and handsome catalog printed very nicely and well illustrated.

W. J. UNWIN, Histon, Cambs, Eng.—Sweet Peas, 1910. In this catalog Mr. Unwin points out that he does not list novelties of the Unwin type only but also goes heavily into Spencer's, new and old. His novelties listed for 1910 are Gladys Burt, a soft rich salmon pink, on deep primrose ground, Spencer type; Edna Unwin, intense orange scarlet; Douglas Unwin, a beautiful rich self maroon of the largest Spencer type; Doris Burt, a large sun-primrose scarlet; Frank Unwin, soft lavender slightly suffused mauve, Spencer type; Clara Curtis, a fine deep primrose, Spencer form; Arthur Unwin, standard bright rose shaded cream, wings cream suffused rose, Spencer type; Blue Flake, a pleasing light blue flake on white

ground, Unwin type; Nancy Perkins, a rich colored Henry Eckford, of the true Spencer form. Additionally, is listed the Unwin Novelties for 1909, followed by a select list of Sweet Peas arranged according to color.

ELMER D. SMITH & CO., Adrian, Mich.—Chrysanthemums and Asters for 1910.—So far as our knowledge extends, this is the complete catalog on the Chrysanthemum issued in America. It serves the double purpose not only of making us acquainted with the varieties of all types but as well, through the illustrations embodied in the book, with the appearance of the majority of the leaders. Commencing with American Chrysanthemums for 1910, are given Commercial, Exhibition and other types comprising the introductions of the Elmer D. Smith firm and other originators. The commercial section of this catalog includes a full listing of the Early, Midseason, Late and Exhibition varieties, of which last there are listed a greater assortment than may be generally known to exist. Following these are listed Anemones, Pompons, Singles, Dwarf Singles and Hardy varieties, while a chapter is given on Chrysanthemums for Special Purposes. Quite some attention is given to Asters of which Smith's Peerless, "The Best White Aster," forms the leader.

JOHNSON SEED COMPANY, Philadelphia, Pa.—Johnson's Garden and Farm Manual for 1910. The Jolly Old Gentleman with chin whiskers on the front page, is here contemplating a fine head of Johnson's Holyrood Lettuce, evidently just picked fresh from the garden, the back cover carries illustrations of Johnson's Very Earliest Radish, Johnson's Very Earliest, the earliest and the hardest of all Cabbages and Johnson's Jack Rose, the earliest good Tomato. All of the cover illustrations are in color. A full listing of the Johnson Quality Standard Seeds in Vegetable, Farm and Flower Seeds is given; also Summer Flowering Bulbs, Peonies, Roses, etc., together with a listing of Insecticides, Poultry Supplies and Garden and Farm Implements, etc. Among the novelties and specialties listed, we notice particularly Carpinaria Green Seeded large Lima; Johnson's Thunderhead Cabbage, a new German Cabbage to be introduced in 1911, trial packets now free; New Long-keeping Celery, Johnson's Manhattan; New Columbian Celery; Johnson's Fivesealed Lettuce, Johnson's Fivesealed Sugar Corn; Johnson's Northmount Egg Plant; Holyrood Hot Weather Lettuce; Johnson's Dreamworld, the most profitable Muskmelon; New Muskmelon, Johnson's Ringleader; New English Pea, "Dainty Duchess" and Johnson's Jack Rose Tomato.

D. LANDRETH SEED COMPANY, Bloomsdale Farms, Bristol, Pa.—This is the 126th annual edition of Landreth's Pedigree Seed Catalog, the oldest seed establishment in America, and, as stated in the preface, "One hundred and twenty-six years is a very brief period in the flight of time, but an exceedingly long one in the history of any commercial establishment, as is proved by the fact that there are only four commercial establishments in the whole United States yet remaining in the hands of children of the founders of one hundred years ago." The arrangement of this catalog varies quite a little from that of many of its compeers in that far more space and attention is given to the descriptions and illustrations of vegetable seeds than in the flower seed section, which latter, however, is quite complete, and all parts of the catalog are carefully illustrated. It should be particularly recommended for its careful cultural directions given for the stocks advertised. Many important planting notes and directions for buyers are given in the forepart of the catalog which will be found of benefit alike by the experienced as well as the inexperienced gardener. Referring again to the Vegetable section, while no special drive is made of novelties or particular specialties extolled one over the other, it is evident that the most critical attention has been paid to describe and illustrate the best in each class according to the needs of growers in the many sections of the United States with which this old and well established house transacts business.

J. G. HARRISON & SONS, Berlin, Md., Harrison's Nurseries.—In the production of this 1910 catalog, after more than 20 years of business experience, it is evident that much time and energy has been spent in the endeavor to keep abreast with other catalogs of a similar character and to make the present one fully informative in all directions embraced within its scope. The Harrison Nurseries now cover some 2,000 acres and the amount of land area and quantities grown of certain specialties are so astounding that one naturally wonders where does all the trade come from to warrant so stupendous an undertaking. For instance, in Strawberry plants, The Harrison firm announce they will set out 100 acres this coming Spring; a descriptive list of varieties in this line is extensive and embraces the

(Catalogue received continued on page 160).

C. EISELE, 11th & Westmoreland Sts., Philadelphia, Pa.

Please mention the Exchange when writing.

These illustrations show how we grow California Privet here at Harrison's Nurseries—and the way our Privet looks when planted as hedges along driveways, walks, etc.

We have the right soil and climate here for growing California Privet, and take unusually good care of our plants. We cultivate the blocks each week, and during the dormant period last year we cropped the smaller sizes—one- and two-year—back to the ground. These plants developed a wonderfully bushy growth in 1909 and are now in prime shape.

The upper view represents a block from which tens of thousands of plants will be dug this spring. This is the kind of Privet you'll be proud to furnish your customers—fine, vigorous, well-rooted and branched plants, every one. In fact, Harrison's California Privet is so strong and thrifty as to be almost a distinct and separate variety in itself.

California Privet Plants for Hedges By the Rod or by the Mile

Whether you want enough Privet to plant a rod or a mile, we want to supply you; write us NOW for particulars and prices. Owing to the mild climate of our locality we dig our Privet only as ordered; this does away with the necessity of digging and storing through the winter. When shipments are to be made, the roots are carefully protected and wrapped, and in this condition, Harrison's Privet can be shipped to any distance without drying out.

Try us on an order for California Privet; we have nearly 300,000 plants in sizes varying from 4-5 feet, down to 12-18 inches. We offer in addition very attractive stocks of Barberry, Arborvitae, Colorado and Koster's Blue Spruce, Norway Spruce, etc., also Fruit and Shade Trees of all kinds. Particulars on request. Address Box E.

Harrison's Nurseries, J. G. Harrison & Sons, Props., Berlin, Md.

To Progressive Carnation Growers Looking for Profits

You are looking for the variety that will show the most profit, plus the greatest satisfaction to your customers. Very well, this carnation will do both. Dorothy Gordon is vigorous and disease-free, with flowers of uniform color—a shade darker than Pink Enchantress.

It produces at least a third more Carnations than does Enchantress, and much larger—average flowers of Dorothy Gordon measure 3 inches or more in diameter. It has a stiff stem, and is a long keeper.

Carnation Dorothy Gordon

It has regularly brought us double the profits of the leading commercial sorts—Enchantress for instance. Let us illustrate: "Enchantress" sells at wholesale in the Philadelphia markets at \$6 per 100; "Dorothy Gordon" has regularly brought us \$9 per 100. In addition, "Dorothy Gordon" produces easily one-third more flowers, or an additional \$3—giving a return of \$12 from the same greenhouse space that would be required to grow \$6

worth of "Enchantress!"

We are selling strong rooted cuttings at \$10 per 100, or \$75 per 1000. We are ready to demonstrate to you that you can grow Dorothy Gordon with greater profit than any other commercial Carnation. We invite you to come to Wyncote and see it growing in our houses; if you cannot do this, write for full particulars—we'll furnish some Carnation facts that will interest you!

(Catalogs Received—Continued from page 155)

best sorts known to commerce. An illustration is shown of a Strawberry and orchard crop on the same land, which method of planting can be made to pay a handsome profit while the young orchard is coming to maturity. Peaches are listed extensively and about 3,000,000 trees are grown. The Apple stock comprises some 2,000,000 trees and preference is given to propagation by budding, care also being taken that no disease is allowed to gain a foothold in the Nursery. A department of Dwarf Apples is also incorporated; this size of tree is found particularly satisfactory for small gardens and in the back yards of city homes. Pears, Cherries, Plums, Grapes and the Small Fruits are extensively listed. The Ornamental Department is a feature in this catalog and particular attention has been given to the production of select lots of this class of stock. Shrubs, Trees, Herbaceous Plants, Roses and Hardy Herbaceous Perennials are all carried in goodly stock. The four cover pages are illustrated in colors, one of the most noticeable being that of Klondike Strawberry. The illustrations of Stayman's Winesap and Crawford's Late Peach are also of interest.

HENRY F. MICHELL CO., 1018 and 518 Market st., Philadelphia.—Catalog of Michell's seeds for 1910. This year the house attains its majority in point of establishment and the publication is a fitting souvenir. The book opens with a monthly table of farm and garden operations, each month embellished with a quaint illustration. Following are pages devoted to new introductions of plants for 1910, which include several new Carnations and Chrysanthemums, Fenical, a new double Geranium said to be the largest flowering variety in existence; Mehan's Marvel Mallow, recently the subject of a colored insert in the Exchange; American Pillar, the new hardy Rose; and Rose White Killarney. A novelty section takes up six pages, and features the new Crego Asters which have been so much lauded in the West, and several other Asters; new varieties of Baby's Breath, Cineraria, Cosmos, Delphiniums and Gaillardias; Dimorphotheca aurantiaca, the new, showy annual Daisy from South Africa which is evoking much interest this season; new Petunias and Poppies; the new Hybrid Gerberas, the most notable novelties, in the opinion of many, in recent years; new Phloxes, Salvias, Verbenas and Stocks, Spencer Sweet Peas and many other flowers. Vegetable novelties illustrated and described are Holmes' Green Prolific and Carpentaria Pole Lima Beans, the new Hybrid originating in Philadelphia, and which "grows green, dries green and stays green;" and Watermelon Keckly Sweet, described as the toughest and thinnest rind Melon grown. There are two pages of Vegetable Specialties, cover-

ing Melons, Peas, Parsley, Radish, Spinach, and Tomatoes. The general lists of Vegetable and Flower Seeds are very full and comprehensive. There are four colored pages, the subjects being Michell's Giant Mixed Nasturtiums, Michell's Sweet Peas, Michell's Giant Flowering Peonies, and Michell's Japanese Iris Bulbs and Roots, Flowering and Decorative Plants, Chrysanthemums, Dahlias, Roses, Climbing Plants, Hedge Plants, Evergreens, Ornamental and Shade Trees, Hardy Deciduous Shrubs and Fruits, in variety, are also illustrated and described, and many pages are devoted to implements and garden and greenhouse supplies. The publication embraces 156 pages, and appears within stiff paper covers, the front page bearing a view in colors of grounds of an institution, the lawn of which was sown with Michell's Evergreen Grass Seed, with the catalog title embossed in gold and colors; the rear page is illustrated with a colored view of the two Michell store establishments. We have also received Michell's Wholesale Price List, for Florists and Market Gardeners, a 56-page publication supplementary to the general catalog.

PETER HENDERSON & CO., 35 and 37 Cortlandt St., New York.—"Everything for the Garden," for 1910. This is the annual Catalog of Vegetable and Flower Seeds, Plants, Bulbs, etc., of this well known house, and it is fully what might be expected from a progressive concern of 64 years' standing. The catalog proper opens with Grasses, and results from the Henderson Lawn Grass Seed, "four weeks from sowing—ready for mowing" are shown in a half page color plate. Vegetable novelties and specialties for the season are prefaced with a color plate showing Henderson's new Early Giant Bush Lima Beans and Henderson's Ponderosa Tomato. New kinds of Beans, Beets and Cabbage, Cauliflower, Henderson's Coreless Carrot, Henderson's Silver Self-Blanching Celery, Peas, Potatoes, Radishes, are all described and illustrated in this section, which is followed by the usual category of standard Vegetable Seeds. Several pages are devoted to Farm Seeds. Then come 38 pages devoted to Flower Seed Specialties, and Novelties. Among these we find two new varieties of Amaranthus; a new double flowering Giant Antirrhinum; Henderson's Invincible Asters; Express Comet, a new early flowering Aster; new German Juno Asters; new Begonias, fibrous rooted; Imperial Hybrid Canterbury Bells, a new type; new Centaureas; New, early flowering, Cosmos; new Delphiniums; new varieties of Dianthus; Adnet's New Gerbera Hybrids; a new Lobelia, Illumination; a new Moon Flower; new varieties of Myosotis; new Petunias; new dwarf Phloxes; new Poppy Stocks of Nice "Abundance" and Henderson's new Spencer Sweet Peas, these with Henderson's Paragon Collection of Spencer's forming the subjects of a two-page color plate. The general list of flower seeds is, as usual, very extensive. Summer Flowering Bulbs, and Water Lilies and Aquatic Plants have separate sections devoted to them. The plant department opens with Roses, the place of honor being given to the two new hardy, everblooming, climbing Roses, Dr. W. Van Fleet and Silver Moon which the firm is sending out; these Roses are beautifully illustrated in a color plate, on the back of which is featured, also in colors, the Radiant Collection of eight hardy everblooming Roses. Nineteen pages altogether are devoted to Roses. Other plants in this department include garden and greenhouse plants, Carnations, Chrysanthemums, Dahlias, Ferns, Geraniums, Pinks and Decorative Plants, Hardy Shrubs, Fruits, Garden and Greenhouse necessities are described in the concluding pages. The publication comprises 200 pages, bound in stiff paper covers printed in green, the front page bearing a garden scene and an embossed representation of the new Rose Dr. W. Van Fleet, and the rear page another Garden scene with embossed Spencer Sweet Peas.

Important Announcement to Carnation Growers

CARNATION MRS. C. W. WARD

At the earnest solicitation of a large number of commercial and private growers, the Cottage Gardens Company has decided to disseminate, this year, the two famous carnations

Mrs. C. W. Ward and Alma Ward

Two varieties which are well known to all the leading growers of the country. Four years' test in the New York Market has demonstrated their popularity and good staying qualities. For the past three years we have been growing from fifteen to twenty-five thousand plants of each, during which time they have always commanded the highest market prices, and at no time has the supply been equal to the demand.

On the exhibition table they have taken the highest honors, and we believe it is safe to say these two Carnations stand without an equal.

Mrs. C. W. Ward

MRS. C. W. WARD is a perfectly formed flower with full center; color deep pink, several shades lighter than Lawson, deeper than Winsor; having strong, erect stems, 24" to 36" in length. A vigorous, healthy grower, and has never shown disease of any kind.

A very early and free bloomer, producing fine flowers as early as September 1, which bring from twenty-five to fifty per cent. more than any other variety on the market.

The keeping qualities of this variety are remarkable. Several shipments of blooms sent to Europe reached their destinations in perfect condition, and wherever exhibited it has always been the last to show signs of wilting.

AWARDS

Silver Medal of the Society of American Florists.....Boston, 1906
The Craig Cup for Best Seedling.....Philadelphia, 1906
The Lawson Bronze Medal.....Washington, 1908
The Horticultural Society of N. Y. Silver Medal, Sweepstake
Prize for Best 100 Blooms.....New York, 1909
The Horticultural Society of N. Y. Diploma for Best New
Variety.....New York, 1909

Rooted Cuttings, \$2.00 per 12, \$12.00 per 100, \$100.00 per 1000.
25 at the 100 rate. 250 at the 1000 rate

Delivery February 1st

Alma Ward

This beautiful Carnation is pure white, except during dark weather, when it shows delicate splashing of pink similar to the Cattleya, increasing its popularity.

ALMA WARD is the largest, most fragrant Carnation ever grown, producing perfect flowers 3½" to 4½" in diameter, on strong, erect stems, 36" to 42" in length.

This most remarkable variety takes the same place among Carnations as the American Beauty Rose does among Roses, and has, during the past four years, been awarded numerous prizes, including the following:

The Lawson Silver Medal.....Toronto, 1907
(No Gold Medal having been awarded)

The Lawson Gold Medal.....Washington, 1908
Silver Medal of the Society of American Florists.....Washington, 1908

Rooted Cuttings, \$3.00 per 12, \$5.00 per 25, \$9.00 per 50, \$15.00 per 100, \$35.00 per 250, \$65.00 per 500, \$120.00 per 1000.

Delivery February 1st

INVITATION

We extend a cordial invitation to all those interested to visit our establishment, where they will have an opportunity to see these varieties growing and to compare their good points with other standard varieties grown under the same conditions.

COTTAGE GARDENS CO. Inc. QUEENS (L. I.), N. Y.

MARY TOLMAN

Winner of First Prize at Milwaukee. Deep flesh pink, the most beautiful color of any in this class. Does not fade in the strongest light. An excellent, clean, upright grower, long, stiff stems and perfectly formed flowers. Will produce more perfect blooms in a season than Enchantress. We want your order for this excellent Carnation. Orders booked now for February, 1910, delivery. **\$12.00 per 100, \$100.00 per 1000.**

California Notes

Southern California is an interesting country to the student of plant life and of climatology. All other sections of the United States of the same extent of territory in the same parallels of latitude present the same general appearance, and the same vegetation grows as well in one part as in any other. President Wheeler of our State University is credited with the saying that, "beginning with the coast, forty varieties of climate may be found on a journey of forty miles inland," which is practically true. A trip to Redlands, San Bernardino and Riverside during the recent holiday season was a revelation to me and a practical illustration of the correctness of the proposition. The section of the State is known as the San Gabriel valley. The distance is 67 miles. The elevation above sea level is 291 ft. at Los Angeles, 1039 ft. at San Bernardino, 1334 ft. at Redlands and 868 ft. at Riverside. About Los Angeles Heliotrope, Fuchsias and Plumbago Capensis were in bloom, and where trained to supports were 8 to 15 ft. high. East of the city, ten miles, fields of Violets were in full bloom. Acres of Peas and other hardy vegetables were green and luxuriant. As we approached Pomona, 34 miles inland, at an elevation of 515 ft., the effects of frost on vegetation began to be apparent, and from there to Riverside and San Bernardino—a section of country the most valuable to the square mile of any other section of the United States, because of its citrus fruit orchards and Walnut groves—the sight is distressing in the extreme to the lover of plant life, to see the effects of the frost on the luxuriant young growths of Orange and Lemon trees, square mile after square mile in extent. The amount of fruit on the trees is not nearly so great as I have seen in these same orchards, and if a 30,000 carload record is to be made this year for California the fruit must come from somewhere else than is to be seen from the car windows. It does not necessarily follow that because the tender

growth is killed by the frost the fruit is damaged also, for two reasons: first, it is protected by the hard mature foliage; and, second, it will stand a lower temperature without injury. At San Bernardino, Geraniums were killed to the ground, and no other flowers of a tender nature were to be seen. There is another factor characteristic of that, and all other inland sections of the State, which precludes the cultivation of so great a variety of plants as are grown near the Coast, namely, low relative humidity.

And now the most interesting part of this story to all readers outside of California will appear—that which relates to Redlands and the country immediately surrounding it. The distance between it and Riverside, on an air line, is about nine miles. The difference in altitude is 466 ft., which places Redlands in what is known in this State as "the thermal" or frostless belt. As a matter of fact, there is no frostless belt in this State, but it is in these peculiar locations, situated as they are between the altitudes, above which a citrus tree will not endure the cold and below which the frost makes its culture for profit hazardous—and such is the situation of Redlands, so named because of the color of the soil.

A plain statement of facts as I observed them may help the reader to a correct understanding of climatic conditions as they exist there. The tender growths of citrus fruit trees were not injured. Bougainvilleas covered the one side of a two-storied house. Bignonia venusta showed bloom and the same vigor which characterizes it in Los Angeles, Carnations in the open had the same appearance as they have here at this season of the year. But the absence of Ferns of the Nephrolepis type, and Begonias, so extensively grown here, was indicative of a low relative humidity during the Summer.

A drive through Smiley Heights, a private park of a hundred acres, open to the public at all times, except to that part of our population which travels in

F. E.—The Best Advertising Medium

automobiles and on motorcycles, is worth the price of a trip across the continent.

Founded by twin brothers named Smiley, and maintained by them at great expense, it is a collection of all plants which will endure the climate, and for scenic beauty it has no equal in Southern California. The Orange groves of the valley and the villages which nestle among them, present a beautiful sight indeed. The elevation of these grounds at the highest point must be 1500 ft. Of the many interesting subjects growing thereon I noticed Genista Canariensis, which seeds freely and has the appearance of being indigenous to the place. The Canariensis fruits so abundantly and the color of the fruit is so rich and clean that the trees are more attractive than any I have seen in any other part of the State. Nandina domestica, an evergreen shrub native of China, is one of the conspicuous subjects because of the panicles of vermilion colored berries. It is grown in a shrubbery, away from the direct rays of the sun. Primula obconica in large beds in shaded locations show vigorous foliage and fine flowers; so also do Cyclamens.

A characteristic of these "thermal belts" is that scale pests, which are a menace to successful plant culture in sections of greater humidity, are not so numerous and pernicious. Indeed, Pepper trees are not infested there with black scale as they are here, which obviates the necessity of cutting the tops off every few years and burning them, or spraying with insecticides, as we are obliged to do. Neither are the Redlands citrus fruit growers under the necessity of fumigating their trees so often to keep them clean.

These are observations of but a day. To study the subject thoroughly, which includes irrigation, cultivation, fumigation, and fertilization, would require at least a month of time, and that, too, away from the railroad, among the growers, the men and women who are above the average in intelligence, working with a will and tenacity of purpose to convert this desert country into a land of beauty, in which it shall be pleasant and profitable to dwell.

P. D. BARNHART.

New Haven, Conn.

Joseph J. Sokol, 21 Hard st., Westville, has taken over the 35,000 sq. ft. of glass formerly run under the name of Sokol Bros. He recently erected a large house and a propagating house, some distance from the old range, and intends to erect more glass on the new location during the coming season. Mr. Sokol makes a specialty of plant trade and ships to all parts of the country. At this time he has an excellent lot of Primula obconica in 4" pots, Hydrangea, Otaka in 5" to 7" pots and some extra fine Cinerarias in 4" and 5" pots. His houses are holding more stock at present than the average grower usually puts in 50,000 sq. ft., every spare inch of space being utilized. The present range is one of the oldest in New Haven, but has only been under the direction of Mr. Sokol for a short term of years. The Freesias grown here are from an especially fine strain belonging to Mr. Sokol, pure white, with extra long stems.

The New Haven Nurseries Co. is comparatively new, being formed during the past season. Louis Soldan is general manager, and his extensive acquaintance among local people and the trade in general will surely result in more business than their present 12 acres can accommodate. The downtown office is at 123 Church st., and the nursery is on Ellsworth ave.

Alfred Ostermann has one of the best locations in this city, as he is nearly at the corner of Church and Chapel sts., at which corner all cars meet and the waiting public have a chance to look around. This store has been here for about six years and some exceedingly good trade is reported for the past holidays, and since that time funeral work has been brisk.

H. Trisch of Newhall and Lilac sts., has some 5000 ft. of glass and grows a general assortment of stock for the retail and funeral trade, to which he caters. Some exceedingly fine Cinerarias, Paper Whites and Primroses are now in flower, and during the holidays he forced large numbers of Tulips. He has been here for the past 12 years, and does considerable landscape and nursery work in connection with his flower trade.

Guatave Amrlyn is superintendent of parks, and at present has 10 parks, with a total of 1017 acres. Mr. Amrlyn has had charge of the park system for the past 10 years and at present employs a Winter force of about 25 men.

Here it is! **Bon Ami** A NEW WHITE CARNATION

Equal in production to the old Queen, with flowers of a far superior quality. An excellent, clean, upright grower, producing no surplus grass. Stem, very strong and of good length. Average size of flower, 3 inches. An early, continuous bloomer. Bon Ami will prove a good friend to all who will try it.

\$10.00 per 100, \$75.00 per 1000. Orders booked now for February delivery.

Evergreens for Hedges

The following notes on evergreens for hedges, from Mr. Otto Katzenstein of Atlanta, Georgia, will be read with interest:

"Your notes on evergreen hedge plants in the current issue of the EXCHANGE had my special interest. I have always believed that Wax Myrtle and Ink Berry ought to be grown by the ten thousand instead of tens and hundreds, and while in Pinchurst I did keep a very good-sized stock of them.

You are right in balking at the trouble of raising these plants from seed, but as long as the woods are full of them, and they can be collected at a very reasonable expense, there is no reason why a nursery could not have a fine stock within twelve months from taking them in stock.

I do not think very much of *Euonymus Japonicus*. It is a good enough plant but altogether too easily affected by the *Euonymus* scale. There is no remedy against it once a plant is diseased and the scale will spread over every other species of *Euonymus* of the whole section. Only quite recently I was consulted regarding a lot of diseased plants, and while examining them found a big cluster of *E. Americanus* just covered also. I had to have the lot dug out and cremated to prevent further damage. I found this scale in Pinchurst, in Raleigh, and a good many other places and I run shy of *E. Japonicus* for this reason. If I could hear of a remedy, I should like to try it. Whaleoil soap, fumigation, etc., are of no avail.

The very best of our native evergreens is *Ilex Dahoon*. It beats all others to a frazzle. There are a number of fine specimens in a park here which are immensely admired by everybody. A nurseryman growing a big stock can make his fortune, I believe, with *Ilex Dahoon*."

The *Euonymus* scale which he mentions is visible wherever the evergreen one is, and on deciduous ones as well, but it will not do to say the pest cannot be killed. Scalecide will kill it, and has done it for me, and I think anything else that destroys San José scale would kill it as well. The dose the writer gave some *Euonymus* was so strong that it killed the foliage as well as the scale, but the bush pushed afresh with vigor; there is no need to have the mixture so strong.

JOS. MEEHAN.

Parasitic Plants on Rhododendrons

Editor The Florists' Exchange:

In reference to an article in a recent issue of the EXCHANGE entitled "Parasitic Plants on Rhododendrons," permit me to offer the following.

It is a well-known fact, that a co-partnership between green, or chlorophyll bearing, plants and fungi is of rather common occurrence in Nature. It is most pronounced in the case of lichens, where the "living together" of algae and fungi is termed symbiosis, less so, when the fungus, or mycelium of fungi, on the roots of plants of the higher orders (phanerogames) forms the, so-called, mycorrhiza (fungus root). But, evidently, the partnership is beneficial to both kinds of plants, and the fungi, therefore, cannot justly be termed parasites in this case.

Rhododendrons, as well as most—probably all—plants of the order Ericaceae, are favored with those fungus roots, and that, most likely, is the reason why they delight in a soil rich in decaying vegetable matter, such as peat and leaf mold; but it also suggests that they should like well rotted manure, and they certainly do. Of course, they will not stand for any fresh manure, or manure containing much calcareous matter—hen manure, for instance—but otherwise, give them any old manure, and they will relish it, especially if it has been well worked into the soil some time in advance of the planting. A batch of Azaleas (*A. mollis*) in a Chicago park, some years ago, did extremely well, not alone in flowering, but in growth also, in ground which in earlier days had been used as a dump for night soil, and still gave off a pretty strong odor when stirred. Nicholson's Dictionary of Gardening advises the intermixture with the soil of Rhododendron beds of dried cow manure, but, no doubt, the drying process can be dispensed with, if the manure is old and well rotted. The lime in the water seeping in from the surrounding ground, and that in the "hard" water supplied through the hose, is what generally kills Rhododendrons and Azaleas, and other ericaceous plants in prepared beds, together with the possible severity of climate, for example, Chicago's.

The name of the fungus forming the mycorrhiza on Rhododendrons most likely could not be determined, even

by a specialist in mycology, as he would find only the mycelium, but it is, of course, of no more practical importance than the discovery of the north pole.

Chicago, Jan. 14, 1910.

J. P. PEDERSEN.

Editor The Florists' Exchange:

An interesting question was raised in your issue of Jan. 8, p. 53, on plant symbiosis, the article in question being in reference to the Rhododendron family.

In regard to the scientific point involved few of us have decided opinions, but when it comes to the practical question, as to whether or not manure can be used for the benefit of Rhododendron plants, I am of the opinion that most growers will agree with Inquirer, that an application of manure judiciously used is of great benefit to not only Rhododendrons, but kindred plants.

If wanted as a topdressing, to be applied in the Fall, even fresh cow or ox manure may be used; but if wanted for use in a compost in which to plant Rhododendrons, then well-rotted manure only should be used. The same remarks apply to the Lily family.

As to the question "peat, or no peat" for Rhododendrons, our own opinion is that while a peaty soil is an advantage in preparing beds or borders for such plants, yet it is not indispensable, as to being about the open porous condition of soil wanted, and which may be easily penetrated by the fine hair-like roots of Rhododendrons, an addition of leaf soil or swamp muck to any good virgin loam, with some well-rotted manure, will bring about results equal if not superior to what would be had were peat used. As to trouble with chalk in the soil, an application of Epsom salts, we have been informed, will overcome that difficulty.

Many newly imported Rhododendrons are killed annually by being planted with a large ball of peat around their roots, which material, when planted in ordinary soil does not incorporate with it, but remain in a separate lump and in Summer becomes like a dry sponge, starving the plant to death. A better plan is to partly break up the ball so that new roots will have a chance to strike out into the new soil.

Newport, R. I.

ALEXANDER MACLELLAN.

Editor The Florists' Exchange:

I am very much interested in the article that appeared in your valuable columns on Parasitic Plants on Rhododendrons. I have handled these plants by the thousands, and have planted them in almost every kind of soil where a shrub would grow, but never before heard of parasites on the roots of these glorious shrubs. However, there might be such a thing, but I can say that manure has never injured any that I have ever planted; in fact, good manure such as cow manure, well rotted, is considered an excellent food for them. I am educating the people in the Middle West to plant them in large quantities, assuring them that they will be well repaid for the money spent. I find Rhododendrons do well in heavy, wet or clayey soils, but the best I have ever seen are grown in a loamy soil just above gravel, in the southwest part of England. I have seen them attain the height of 15 ft. I have seen hedges on the west coast of England running for miles each side of a road, growing in nothing but beds of flint 18 inches below the surface. I have also seen them grown on the eastern coast of England on sheer sand, where hardly grass would grow. As the gentleman says, they will not grow on chalk; nevertheless, if you will take the trouble to find out you will find that they grow in and around marl, which is a good duplicate of chalk. Around Eastbourne, Hastings, and St. Leonards, and Hailsham, in England, where the great marl hills are, they grow abundantly. I hope to see some good lively discussion on this subject.

La Grange, Ill.

WALTER SCOTT.

Shade Trees in Cities

At a meeting of the Horticultural Society of New York, held recently, Mr. William Solotaroff, who is connected with the Shade Tree Commission, of East Orange, N. J., delivered an interesting lecture on this subject. The lecturer opened his remarks by saying that upon the arrival of the first settlers in this country, the first idea had been to procure a shelter and obtain ground for the raising of crops. These being the main and essential things, the preservation of trees, in the laying out of their villages and towns, had not been considered of importance. This habit, thus engendered, had grown with the people, and it was only comparatively recently that the necessity of trees in cities had been appreciated. The city was not only, he said, a place of commerce, but it was largely made up of homes, and anything which added to its beauty, which trees certainly did, increased the value of its property. The tree, therefore, as an essential thing in the city was being recognized; and it was also becoming evident that the trees in a city should not be left to the care of the individual, but should be placed under the charge of the city itself. If left to the individual there would be many kinds of trees on the same street, a condition usually to be avoided; they would be planted in different ways and at unequal distances; the pruning would not be properly done, nor the trees systematically treated for insect and fungus

pests. To insure uniformity in the planting of trees and their proper maintenance after planting, it was necessary to place the whole matter under official control. In cities where this had been done for many years, notably, for example, in Washington, D. C., the results were most satisfactory. To insure this uniform result the street should be treated as a unit, that is, only one species of tree should be employed, and the pruning should be done with a definite aim in view; to provide shade without obstructing the sidewalks or roadways, interfering with the view, or preventing the free circulation of the air.

It was the State of New Jersey, he said, which first recognized the necessity of vesting this power in a central body, and in 1893 that State enacted a law, a local option law, for the planting and care of shade trees. Passaic was the first city to adopt this law. Newark followed, and the third city to make it active was East Orange. There were now 22 cities in New Jersey which had shade tree commissions. So successful had these commissions been that other States and cities had followed the example thus set them, the State of Pennsylvania enacting a similar law in 1907.

The lecturer, then exhibited a series of lantern slides, showing streets in various cities, planted as they should and should not be. The illustrations were certainly convincing. A number of the views were taken in Washington, D. C., the speaker remarking that it was the abundance of fine shade trees and the care used in their selection and planting which made that such a beautiful city. One street shown was planted entirely with the American Elm. In Indiana ave. the Oriental Plane, *Platanus orientalis*, had been used, the lecturer speaking in the highest terms of it as a street shade tree. The American Linden had been assigned to Massachusetts ave. His auditors were then taken to his home city, East Orange, by means of slides showing some of his own work. The results achieved in a few years certainly appeared most gratifying. The work had been accomplished economically, at a small expense per capita.

Mr. Solotaroff then remarked upon the importance of the choice of trees in street planting. The desire, he said, was often for a rapidly growing tree, at the sacrifice of other more desirable qualities. The Carolina Poplar was often selected on account of its rapid growth, but he could not recommend it, as its roots soon pervaded everything, filling drain pipes, lifting pavements, and becoming a nuisance generally. The soft Maple was also condemned as being undesirable. The Oaks were highly recommended, especially the red and pin Oaks. A slide was exhibited of 12th st. in Washington, planted with red Oaks, which, the speaker said, should be an inspiration to every tree-lover. The prejudice against the Oaks he laid to the fact that trees of this kind were often taken directly from the woods. This was a severe test for any tree, and especially for the Oaks, as the feeding roots were a long way from the base of the stem, and were left in the ground when the trees were dug up. In nursery-grown trees this difficulty was overcome, the constant plowing and root-pruning to which they were subjected, resulting in a ball of roots close to the stem, insuring a mass of feeding roots when the tree was transplanted. A series of slides illustrated this point admirably.

The subject of the pruning of trees was discussed. A fruit tree should be pruned, he said, to produce the greatest quantity of fruit; a lawn tree to preserve its odd or peculiar shape; but shade trees in streets should be pruned a uniform height, and in such a manner as to make a compact top, at the same time retaining, in so far as possible, the natural habit and growth of the species. The proper methods of pruning were illustrated with lantern slides, a number of slides portraying the disastrous results which followed pruning improperly done. Tree surgery was recommended for comparatively small wounds, but the speaker did not seem to feel so sure of it for large cavities.

The pests of shade trees were also commented upon. These the speaker divided into three classes: Those which feed upon the foliage, such as the caterpillar of the tussock moth; the borers, represented by the caterpillar of the leopard moth; and the scale insects, including the cottony scale. Methods of spraying were described, and several forms of spraying machines illustrated.

G. V. N.

The Forthcoming Great Orchid Exhibition

The greatest exhibition of Orchids that has ever taken place in the United States, and perhaps in the world, is scheduled for May 26 to May 30, 1910. The patron of the show is the Massachusetts Horticultural Society, and the city in which it is to be held, Boston.

Attention has previously been drawn to this great attraction and feast which is provided for lovers of the Orchid and especial note has been made of the magnitude of the prize offers; in Class 1, for instance, the awards being for first prize winner, \$1000; 2, \$500, 3, \$250.

It is expected that the liberality of the awards will attract competitors from over the seas; if this happens it surely will create much additional enthusiasm.

Intending exhibitors must bear in mind to file their entries with the secretary of the Society not later than April 1, 1910. Schedules may be obtained of the secretary, Wm. P. Rich, 300 Mass. ave., Boston, Mass.

AN

APHINE TEST
ON ROSESKILLARNEY "THE LINDENS" GREENHOUSES 261-273 Rosedale Ave
THE BRIDE BRIDESMAID A. H. & W. S. Schultz Telephone 19-R

Madison, N. J., January 20, 1910.

Aphine Mfg. Co., Madison, N. J.

Dear Sirs: Having just made comparative tests between Aphine and fumigation for our own information and benefit, we think you will be interested in the results.

For green fly on our Rose plants we used Aphine as directed, 1 to 40, applying with an auto spray; choosing sunny days, and using a fine spray. We carefully sprayed the plants early in the morning. In a few minutes the fly began to drop and later when we syringed with the hose we found the plants well rid of fly. In addition we found no discolored buds as in fumigating, but what attracted our attention, the foliage seemed to be improved and invigorated.

From a financial standpoint it costs us \$3 and \$4 to fumigate 2000 lineal feet of Rose houses each time, whereas we would use only a half gallon of Aphine for the same purpose.

The results have shown us that Aphine is higher in efficiency and lower in cost than fumigation.

Yours very truly,

A. H. & W. S. SCHULTZ.

The manufacturers of Aphine guarantee a uniform product at all times, and, (if used strictly according to directions), that it will do all that is claimed for it AND MORE.

\$2.50 per gallon

APHINE MANUFACTURING CO., Madison, N. J.

Fires

EVERETT, MASS.—A fire damaged the greenhouses of Mr. Towle to the extent of \$500.

SHORT HILLS, N. J.—The greenhouses of Thomas Jones were damaged by fire to the extent of \$2,200 on January 10.

MANSFIELD, O.—The big greenhouse of the Stuhldreher Bros. was damaged by fire, to the extent of \$1500, on January 11.

EVERETT, MASS.—The boiler house connected with the Woodlawn Cemetery greenhouses was destroyed by fire January 9.

EVANSVILLE, IND.—The Ohio Valley Seed Co. were losers through a fire which on Jan. 26 completely destroyed the building of the Journal News Company.

Firms Who are Building

KANK

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in General.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published every Saturday by the A. T. De La Mare Ptg. and Pub. Co. Ltd., Proprietors, 2, 4, 6 and 8 Duane Street, New York. A. T. De La Mare, president and managing editor; Jas. H. Griffith, secretary; David Touzeau, treasurer. The address of the offices is the address of this paper. Short address: P. O. Box 1697, New York. Telephone 3765-6 Beekman

PRINCIPAL OFFICES

Chicago: Margaret T. Flint, room 614, No. 60 Wabash Avenue; tel. Randolph 2000. Office hours: 9.30 to 12.
Boston: Robert Cameron, Cambridge, Mass.
Philadelphia: A. H. Secker, 306 Wood Building, No. 34 So. 16th St.

Yearly Subscriptions.—United States and Mexico, \$1.00, Canada, \$2.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Draft on New York, Post Office or Express Money Order; if paid in cash please register letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

Index to The Florists' Exchange, Vol. XXVIII

This index, covering the period from first issue in July to last in December, 1909, will be shortly ready for distribution. Subscribers desiring a copy of this index can obtain same by notifying us by post card; copies will be mailed to those who have already previously advised us to that effect.

The Florists' Exchange Design Book

Orders on hand will be mailed out February 5th.

The new edition of the Design Book to be issued Feb. 5 will be found a decided improvement; it has been completely remodeled and now contains 80 pages, covering a multiplicity of designs. It will be freely admitted the most valuable compendium of its character ever offered to the trade, as well as the cheapest. It is sold only in connection with a subscription for this paper: The Florists' Exchange two years and one copy of the Design Book, new or renewal subscription, for \$2.50.

The American Carnation Society

Registrations

The following new Carnations have been registered by Geo. E. Buxton, Nashua, N. H.

Bon Ami: Queen/Lady Bountiful; pure white; size 3 to 3½ inches; strong open growth; stem very stiff, 24 to 30 inches long; early and continuous bloomer, seldom splits.

Granite State: Queen/Lady Bountiful; pure white; size 3 to 3½ inches; strong upright growth with no surplus grass; stem 30 to 36 inches; seldom bursts; free bloomer. A. F. J. BAUR, Sec.

S. A. F. and O. H.

Change in Registration

S. Cockburn & Sons of Woodlawn, N. Y., make application to have the name of their Chrysanthemum, previously registered as Dr. Frederick A. Cook, changed to Mrs. Jane Cochran. Public notice is hereby given of the application and unless objections to the change are received within 20 days from publication of this notice the change will be made.

H. B. DORNER, Secretary.

January 20, 1910.

Obituary

John J. Kuratle

After suffering a year with illness, as the result of a cancer, John J. Kuratle, aged 51 years, died at his home, No. 1613 Franklin st., Wilmington, Del., on Jan. 14. Mr. Kuratle was a well-known florist in this section; he is survived by his wife and three children.

George Milne

George Milne, formerly a well-known florist of Marlboro, Mass., died two weeks ago in the town of Winchester.

John R. Hamilton

John R. Hamilton, 83 years of age, died of congestion of the lungs on the morning of Jan. 19 at the residence of his son, Chas. Hamilton, 1104 Cherokee road, Louisville, Ky. Mr. Hamilton was in the seed business on Second st., between Main and Market.

FRITZ BAHR'S NOTES ON THE EXHIBITION

By Special Wire to The Florists' Exchange

Pittsburgh, Pa., Jan. 26, 1910.

Never before has there been a finer lot of Carnations staged than at this convention; with hardly one exception every vase shown was worthy of a prize. Pittsburgh has, indeed, proved to be an ideal place to meet and the boys here have left nothing undone to make the convention a complete success in every respect. While the hall the flowers were staged in was not as large as the one in Indianapolis, there were not as many exhibits as last year and so there was really room for all.

In quality this show has set a record which will long be remembered. The varieties which captured the medals should certainly be proof enough for any one that we are making great progress.

Among the many which are worthy of mention, seedling No. 1400 E, which will be sent out next year, under the name of President Valentine, is in my estimation the most beautiful Carnation ever seen. Let us hope it will make good. Its color is an exquisite shell pink, just a little different from all the others in that class, and of perfect form and habit. Hoosier Lad captured the Gold Medal; another child of the great Dornier. What a flower for size, color and form! White House has the size of a Chrysanthemum; it won the bronze medal; it is a beautiful glistening white; the only drawback is its name.

Dorothy Gordon showed up splendidly and always had a lot of admirers around her; it certainly looks like an improved Rose Pink Enchantress. Alma Ward is a great white and no doubt will be grown largely; the flowers were of perfect form and uniform in size, in fact more so than White House. Mrs. C. W. Ward is a good companion to Alma Ward, a beautiful pink large flower. Bright Spot, Nic Zweifel's seedling, looks to be a bread and butter variety, and I predict a great future for it. While not as large as some of the others it proved a winner in the deep pink class.

Admiration also made a fine showing; it looks like a good thing. Mrs. Walter W. Coles is a beautiful dark crimson and took a blue ribbon, closely followed by Sultana from the Wanoka greenhouses. Seedling No. 40, from F. R. Pierson Co., is a fine pink, worth a trial.

What a wonderful variety Beacou really is was shown by a magnificent vase exhibited by the Cottage Gardens. Sangamo, shown by A. C. Brown, is a fine flower on a perfect stem; so is Harvard for a dark crimson of large size, grown by J. D. Cockcroft. Washington, the Lawson colored sport of Enchantress of Mr. Eichholz, and grown by the Chicago Carnation Co., is indeed a valuable addition to the Enchantress family and, while this may not prove a winner on the exhibition table, it will be welcomed by many growers.

Wanoka, Gov. Deneen, Alvina and O. P. Bassett proved four mighty fine vases at one end of the hall. In the classes of 100 dark pink, among which was a splendid vase of Mrs. Thos. Harvey, were to be seen the finest lot of flowers ever shown. Shasta has about as perfect color as could be imagined and made a fine showing and so with Mary Tolman as a flesh pink.

Among others which particularly attracted my attention, I might mention Annie May, Toreador, Rainbow, Afterglow and Princess Charming; ten splendid vases of standard varieties, grown by the Pittsburgh Cut Flower Company, as well as some excellent stock from the Lam-born Floral Co., Alliance, Ohio, which included as fine a vase of Lawson as one would care to see; no doubt there were others among the many vases which I overlooked.

A New Gladiolus

At the flower show, July 26, 1909, at Haarlem, there was, among other important exhibits, a new Gladiolus which attracted great attention. It was shown by Mr. P. Vos Mz., a florist of Sassenheim, and was called Lemoinei "Pink Beauty." This Gladiolus is, without doubt, an acquisition of great importance, for when planted in the beginning of Spring, it has stalks about one metre in length as early as the middle of June. The color of this flower is a livid, deep pink, with a dark purple velvet spot. The plant was grown from seed some years ago by Mr. C. Van Tol of Katwijk. It flowers considerably earlier than the sorts Lemoinei and Gaudavensis. Mr. Vos, who is one of the largest exporters of cut flowers in Holland, became owner of the lot for a good round sum. It is generally agreed here and elsewhere, that this is a sort having a great future. When there are few flowers available, when the need is most felt for them, this Gladiolus is in full flower. Next year this novelty will be put on the market by Mr. Vos.

THAT subscription to F. E. you have been thinking of taking out for a brother florist! Why not send it in now?

Dianthus Reviews the Carnations

As Seen at the Exhibition of the American Carnation Society at Pittsburgh, Pa.

By Special Wire to The Florists' Exchange

Pittsburgh, Pa., Jan. 27, 1910.

The judging of a Carnation from its appearance in the exhibition hall is rather a difficult matter. Some of the most promising varieties on the exhibition table have turned out to be disappointments when planted and treated as commercial varieties, but there are certain points which may be taken into consideration when studying a vase of blooms only, and if the necessary qualities are found then there is some reason at least for classing them as varieties of merit. Some of the qualifications which are necessary to every successful variety may be looked into and, if found satisfactory, we have some encouragement toward giving them a trial.

The exhibition in Pittsburgh, on the whole, has been very successful. The varieties from the different parts of the country have come through in good condition, and there seems to be an improvement as regards the keeping qualities of the various sorts. The entries in the class for the gold medal were many and the vases shown were of a special good quality. The judging in this class must have been difficult for the judges, as one and all of the entries showed excellent blooms. While it is not possible to give satisfaction to everyone entering, it must be said that the judges have done as well as might be expected and the awards throughout have shown careful and conscientious work.

A noticeable feature of the exhibition was the absence of our favorite variety Enchantress, the varieties May Day and Pink Delight crowding out the first named variety. There were also several novelties shown of very high-class which helped to rob Enchantress of the honors so often won in the past.

No. 1400 E is an exceptionally handsome variety which, we understand, Mr. Witterstaetter has named J. A. Valentine. It has excellent form, size and stem. The calyx seems to be good and, at the present writing, we would judge that the flowers were good keepers. The color is a light soft pink, similar to Pink Delight, with less of the salmon; it is possibly a trifle deeper in shade than the aforementioned variety. As a vase of blooms on the exhibition table it is truly handsome.

No. 40, shown by F. R. Pierson Co., is also very beautiful. It is somewhat darker than Winsor, bordering on the Rose Pink Enchantress shade; the form of bloom is very even, well built up in the center, and holds a soft color evenly. It seems to be of the Lawson habit, with a medium stem, possibly longer than either Lawson or Winsor.

Scarlet Glow, as it appeared in the hall, was the finest in this color. To best describe it, it might be said that this is a White Perfection with a clear, scarlet color. The stem is good and, in fact, resembles White Perfection in nearly every way. This is one of Dornier's varieties, and we hope it will prove as valuable as the majority of his introductions.

The variety Admiration was received well by Carnation men in general. The color is a soft pink of a satiny finish, between Winsor and May Day. The bloom is large and of excellent form; while the stem is not as long as some of the extra long-stemmed varieties, it is better than any of the Lawson class and is stiff and straight; the calyx seems to be perfect. A large vase of this sort showed up very well and it gives every indication of being a good commercial sort as it is claimed to be a free bloomer of very good habit.

Dorothy Gordon was shown in its usual good form and is well worthy the consideration of every buyer of novelties. The keeping qualities are good, and in size, form and color it is up to expectations. Dorothy Gordon has been described by many as an improved Rose Pink Enchantress and, although it resembles this variety very much, it may be honestly called an improvement.

Bright Spot has good form and stem; it is of medium size and the color is of a light Lawson shade; the form is even and quite pleasing. If this is a productive variety it might pay as a commercial sort.

As usual, Mrs. C. W. Ward made a good impression. It was staged in elegant shape and demonstrated again that it was a fancy sort in every way. There is no doubt that this variety will bring a good price in the market.

Alma Ward was easily the most handsome white in the hall; it is doubtful if this sort can be beaten on the exhibition table. Stem and form are perfect and, while the variety White House may have been somewhat larger, it did not have so fine a finish. If this sort can be made to produce freely it should make good, but this is a question which will have to be demonstrated at a later date.

Mrs. Thos. Harvey, also shown by the Cottage Gardens Company, was very fine in all points, excepting color, which is a trifle heavy, it being a deep pink with a tendency toward blue.

White House, staged by Dailladouse Bros., is a mammoth bloom of clear color and rugged form; the finish of the flower is not quite as perfect as might be desired but its great size makes it an attraction.

Blooms of Sangamo were larger than generally shown, stem was good, but the color was somewhat uneven. It is likely that this was caused by poor packing of the variety, and it would not be fair to condemn this sort as it has many qualities to commend it. It is very free, has excellent stem and does not burst the calyx under the most trying conditions.

Superba did not show up well as regards color; the blooms shown in Indianapolis last year were superior. The form and size is good and stem excellent.

Greenwood is a very large bloom, but it does not have the form and color necessary to a successful commercial sort.

Doosier Lad has everything to commend it as regards size and stem. The form is rugged and of a pleasing finish, but the color is not up to that of Scarlet Glow. One point which detracts from the general appearance of this variety is that the pistils show very plainly.

Annie May is similar to May Day in color, of medium size and with good stem; if blooming qualities and growth prove to be up to the standard this should make a good variety.

Mary Tolman is similar to Pink Delight, a trifle deeper in color, possibly somewhat larger, with good stem and form. It is a very pleasing variety as staged at this exhibition.

Norwood, shown by Robert Craig Co., should be classed as a commercial sort. It is pure white of very good form, and is of medium size. It is claimed to be very free and is called a non-bursting variety, it having made an exceptionally fine record for the past two seasons.

Mrs. Beckwith is another commercial sort with much to commend it as regards form, color and stem; the size is medium, but blooming qualities are said to be excellent.

Niagara is a pure white, also of medium size, good form and very fragrant. This is claimed to be a good grower and those who have seen it at the E. G. Hill houses, in Richmond, consider it valuable as a commercial sort.

Conquest must be seen to be appreciated; in color it is a fancy of two shades of pink; a light background with a splash of deeper pink overlaid. Judging by the opinion of some of the up-to-date retailers it may be prophesied that this will fill the place of the old favorite Prosperity, although it should be said in this connection that Conquest is a handsomer bloom. The color is lively and clear; form is very good and while the stem is not up to that of Prosperity in length it is sufficiently long for all purposes and strong enough.

Red Prince was outclassed by the other scarlets; the color not being up to requirements.

No. 11,004 A, Sultana and Mrs. W. W. Coles, of Kokomo, Ind., are all crimson sorts, but there was not one which came up to the requirements in color. A crimson of any value must have a lively shade and, while the market is so critical in the way of these dark varieties, any one which shows the slightest trace of black edges or deep shadings at the base of the petals cannot be considered an improvement over existing varieties.

No. 42-06 might be termed an improved Pink Delight; it resembles Pink Delight in every way excepting size and color; there is an improvement in size and the color shows less of a salmon with a somewhat deeper and softer pink. This sort seems to be especially good and will bear watching. It is one of Dorner's seedlings and was very well thought of. It is hoped that this variety will be placed on the market next year.

J. Whitcomb Riley was not shown in as good form as last year in Indianapolis. This is a true yellow, with no splashes of pink or red, but it is a question if it would not be improved by slight markings of the colors as this would help to set out the yellow. This variety is deserving of a trial, however, as a limited number of yellows might be grown profitably, all other points being equal.

There was an excellent showing of Shasta, the blooms were large, with the best of form and finish and, judging from the blooms only, there is every reason for a commercial grower to take a liking to this sort. No fault can be found with stem, fragrance or any other point which can be judged on the exhibition table.

Pink Delight and May Day were both shown well and in quantity.

Mrs. J. C. Vaughan and Georgia were shown, but the former was not up to the standard, while the latter may only be called fair. The two standards, White Perfection and White Enchantress were the leaders in their respective classes. It should be mentioned here that Messrs. Dorner & Son showed a white (68-06), which is called an improved White Perfection, the special point in its favor being that it does not burst the calyx. For those growers who find trouble with White Perfection in this respect, this will be interesting.

Winona and Winsor were shown well, but there were less Winsor than usual.

Afterglow, Lawson and Alvina were shown well, and it was interesting to notice how good some of the growers still do the old favorite Lawson. While Alvina is of medium size with short stem, it is a very pretty bloom.

There were full entries of Beacon, O. P. Bassett and Victory, Beacon leading as to number, but they were

all very fine and especially two vases of O. P. Bassett.

It may be said that this exhibition included a large number of promising varieties of all colors. This is especially true in the light pink classes of the shade of Pink Delight and May Day, and also of the Winsor shade or a trifle darker. Dorothy Gordon, Admiration and No. 40 were especially good in the latter class, while No. 1-00 E (J. A. Valentine), No. 42-06 and Mary Tolman looked promising in the former.

National Sweet Pea Society of America

OFFICERS:

Harry Turner, President Harry A. Bunyard, Sec.
W. H. Waite, Vice-Pres. Wm. Duckham, Treas.
Executive Committee: W. Atlee Burpee, Chairman;
A. C. Zvolanek, Wm. Sim.
Nomenclature and Trials Committee: Prof. John
Craig, Chairman; Arthur T. Boddington, Maurice
Fuld, William Sim.
Trial Grounds: Cornell University, Ithaca, N. Y.

Secretary Harry A. Bunyard has issued a preliminary list of prizes offered for the annual exhibition of this

H. L. Blind

Treasurer Pittsburgh Florists' Club and Chairman of Entertainment Committee A. C. S.

Society, which will be held some time in July, date and place to be announced later. The list is as follows:

PRESIDENT HARRY TURNER'S CUP.—Value \$25, for the best 25 vases of Sweet Peas.

THE W. ATLEE BURPEE CUP.—For the finest and largest collection of Sweet Peas.

THE W. ATLEE BURPEE PRIZE.—For the best vase of waved or Spencer type Sweet Peas introduced 1910. 1st prize, \$5; 2d prize, \$3; 3d prize, \$2.

W. W. RAWSON & Co.'s PRIZES.—Rawson's silver gilt medal for a vase of Sweet Peas never before exhibited or disseminated, of American origin. Rawson's silver medal, for the best 25 vases Spencer or Unwin types exclusively, open to the trade only. Rawson's silver medals, for the best 20 spikes of Sweet Peas, "Rawson's Snowflake." Rawson's bronze medal, for the best three vases, comprising white, lavender and pink, open to amateurs. Rawson's silver medal, for the most successful exhibitor among the amateur classes.

WATKINS & SIMPSON PRIZE.—Value \$10, for the best vase of Nora Unwin, Frank Dolby, Mrs. A. Watkins, A. J. Cook and E. J. Castle.

ARTHUR T. BODDINGTON PRIZE.—A challenge cup, value \$50; \$25 to the winner of the cup; 2d prize, \$15; 3d prize, \$10; for a collection of Sweet Peas, 25 varieties.

HENRY A. DREER PRIZE.—For the best 21 vases of Sweet Peas, the 21 "Incomparable" standard varieties as enumerated in Dreer's Garden Book for 1910. 1st prize, \$20; 2d prize, \$5.

JEROME B. RICE SEED CO.'s PRIZE.—For the best vase of white Sweet Peas. 1st prize, \$5; 2d prize, \$3.00; 3d prize, \$2.

Among the Growers

A Day at a World Famous Nursery

Berlin, Md., a Mecca each Year for Thousands of Tree Lovers and Tree Growers

One of the most interesting visits the tree lover can make is to journey to Berlin, Md., the home of the world renowned Harrison's Nurseries. This point has for years been sought by interested men from every part of the United States and foreign countries but, in recent seasons, the number of visitors has grown steadily larger.

This famous tree growing establishment, now occupying over two thousand acres adjacent to the town of Berlin, is truly a sight worth seeing, and no visitor can fail to be impressed with the extent and thoroughness of the work here as conducted under the efficient management of Mr. Orlando Harrison.

This progressive firm carries on its operations upon a scale that makes the uninitiated occasionally gasp with surprise—and even the grower who is accustomed to seeing an entire nursery occupy one hundred to five hundred acres, is likely to "sit up and take notice" at sight of entire farms devoted to a single variety of fruit or ornamental trees, or plants.

As an example, the visitor is shown a section comprising 60 acres on which Strawberry plants are produced exclusively. In another place he will be shown miles of rows of California Privet, and so on—each block or section carefully and thoroughly worked, and nothing neglected in the excellent system that prevails at every turn.

Considerable of historic interest attaches to the Harrison establishment. On one of the farms stands a rude structure in which Commodore Stephen Decatur was born, more than a century ago. Only a few miles away is Ocean City, Maryland's attractive shore resort, which draws many thousands of visitors every Summer.

Service over the lines of the Pennsylvania R. R. from Philadelphia and Baltimore make Berlin easily reached, and a trip thither will certainly prove most interesting as well as thoroughly enjoyable—for the courtesy that is extended to its guests by Harrison's Nurseries is well remembered by those who have been there; suffice it to say that, in this delightful Peninsular town, the cordial hospitality for which the Southland is noted is not lacking in the remotest degree.

Herman Schoelzel, New Durham, N. J.

The establishment of Herman Schoelzel, the place of origination of the now well-known Nephrolepis Scholzei, is a very interesting one, and, as a visitor may expect, the Fern as grown here is well nigh perfect. That its popularity is assured is shown by the amount of space devoted to the securing of young stock, and many hundreds of plants have recently been shipped. Its shipping qualities are extolled by all who handle it, and as a house Fern it has proved to be second to none. Besides this and other varieties of Ferns, Mr. Schoelzel handles many hundreds of Azaleas during the season, and for the coming Easter expects to be able to fill many large orders. The plants are in the best possible condition, and among them can be found the usual standard varieties such as Niobe, Vervæneana, Hexe, Simon Mardner, Van der Cruysen, etc.

Some excellent Kentias in various sizes are on hand, of good color and very clean.

Easter Lilies to the number of about 8000 are being pushed along and with an immense stock of various sized Genistas, Aspidistras, and other florists products keep the help busy from week to week, in order to maintain the reputation Mr. Schoelzel has for producing well-grown, clean stock.

Changes in the American Nursery Company

It was stated in our issue of Jan. 1, 1910, that Mr. Fred'k W. Kelsey had sold his interest in the above named company and, later on in the said article, it was stated that the business established by him in 1875 will hereafter be known and conducted as the F. W. Kelsey Nursery Company. We find that there was error in this statement, and that the business established by Mr. Kelsey in 1875 was turned over to the American Nursery Company, and that the F. W. Kelsey Nursery Company, a New York corporation of which Fred'k W. Kelsey is president, is now conducting a similar business at 150 Broadway, New York City. We regret this error and print this statement to remedy the same.

COLUMBUS, O.—At the annual convention of the Ohio Nurserymen's Association, J. W. McNary of Dayton was chosen president of the organization for the third time.

UPPER FALLS, Md.—A certificate of incorporation of the J. W. Brandt Nursery Co. has been filed for record. The capital stock of \$5000 is divided into 50 shares at \$100 each, and the incorporators are John W. Brandt, Henry J. Raphael and Thomas S. Nichols.

NINETEENTH ANNUAL MEETING OF THE AMERICAN CARNATION SOCIETY, PITTSBURGH, PA., JANUARY 26 AND 27, 1910

The convention of the American Carnation Society opened at the Fort Pitt Hotel, Pittsburgh, Pa., on Wednesday, Jan. 26. The attendance was very large; in fact, it was the hanner convention of the Society. The exhibition was held in the big English dining room of the hotel, and the stagings were both numerous and grand. Never before were so many and creditable new varieties brought together under one roof. The judges were W. N. Rudd, Wm. Nicholson, Richard Witterstaeter, Eugene Dailliedouze, John Boone and Edward Stroud, and the task of judging occupied these gentlemen until well into the evening.

While, with the great number of stagings, one could hardly forecast the gold medal variety, the award of this premier recognition to Hoosier Lad, staged by F. Dörner & Sons Co., was heartily concurred in by all who saw it.

In the classes for pinks, the competition was very keen and the decisions of the judges were close, indeed.

Wednesday Evening Session

The first business session opened at 7.30 on Wednesday evening with an address of welcome by Prof. John A. Brashear, which was responded to by Robt. Craig in his usual genial style.

President Albert M. Herr then read his address as follows:

President's Address

Your president extends greeting and a welcome to our sessions; we hope to have these sessions interesting enough to have you at each one of them.

This Society was organized in Philadelphia, and the first regular meeting held in New York, but it always seemed to me that it took the second annual meeting in this city to get us thoroughly acquainted with each other, and Pittsburgh will always be a bright spot in the memory of those of us who were fortunate enough to have attended that meeting. Those of us who are here today will no doubt long remember the 19th annual meeting and our Pittsburgh welcome.

Getting acquainted is one of the chief benefits to be derived from these gatherings. I know of several instances where men have attended our meetings for the first time and gone home having met but two or three members. In one instance, on the train going home, a new member told me that the only person who spoke to him during the whole convention was the secretary. In cases of this kind the individual himself is largely to blame, but we should, during the few days we are together, be a more universal brotherhood, and have at least a "howdy" for each and every visitor. I would suggest a permanent committee of introduction and information, to whom strangers can apply for assistance in getting acquainted.

Can we make our meetings more interesting and profitable to ourselves and our flower than they now are? We have told and retold the story of production, the proper houses, etc.; there are, of course, new difficulties and advanced methods to discuss along these lines each year, but it seems to your president that we could and should devote at least one session to the improvement of our business methods; that they have improved no one can deny, but the improvement today over that of our meeting here seventeen years ago is very little more than what has been forced upon us by the general upward trend of all business. Other industries do not wait to have improvement forced upon them; they are continually searching for it, grasping and utilizing it.

We should know how much money each square foot of ground surface in our houses should bring us to meet our expenses, labor, heating, operation, wear and tear on the place.

We should have a small but conspicuous tag attached to each bunch of flowers we send into market and let this tag follow them into the retail shop, so that in the course of time buyers would learn to ask for it and demand it as a guarantee of quality. This tag could be marked with the letters A. C. S. or some other special mark, and the whole be copyrighted, for use only by paid-up members of this Society, and all infringements prosecuted. In addition to the special mark could be added the grower's name and the date the flowers were cut, this to be left to the discretion of each user. Poorly grown flowers, and over-aged flowers, by this method would

soon be left in the race. To succeed and properly advance our business our flowers should give pleasure and satisfaction to the user and this suggestion is offered as a means to that end.

Can we improve our methods of selling Carnations? Mr. Fox gave a talk in Philadelphia, from the retailer's point of view, on prices for special days of demand. We all know of instances when the retail market price of Carnations was from \$1 to \$1.50 per dozen and the wholesale price was \$1 to \$1.25 per 100, less the 15% commission to the middleman; this proportion between the grower and the retailer is not a good business proportion, and if it were not for the advanced prices of special days the grower would be in a bad way. Adjustment will have to come some day and it should come through this Society.

Is there overproduction of Carnation blooms? I was told by a Pittsburgh man that if Roses had been plenty for Christmas, Carnations would have gone begging. All hail to the Rose! But Carnations have their devotees as well, and if given to them in proper shape and form I believe the day of overproduction is far in the future, providing the retailer, the grower and the middleman can get together and work toward a mutual end. Let us put on our thinking caps and see what we can do toward this. At our meeting in this city before, we had a paper by Thomas Cartledge, who stood at the head of the Philadelphia retail trade. He reviewed the various Carnations then grown by name, giving his retail experience with each as per this example: "Grace Wilder has been our leading pink, only because we could get it in quantity. Aurora has sold equally as well when we could get it, although it sometimes shows a slaty, ashy purple tint when a little old." We want to grow "best sellers"; a review of this sort each season would help us find them out.

Our exhibitions will admit of some improvement as exhibitions to the public, but as an educator to the grower the lines on which we are working are as nearly right as we can hope to get them; as a guide to the buying of new sorts each individual will have to work that out for himself, with the new flowers, for comparison with older sorts, in front of him.

There is one point I would like to see worked out and that is to have a report from those who buy novelties the first year sent in to the secretary on Dec. 1 of the following Winter, giving their honest opinions of the variety from the buyer's point of view. Let the secretary publish these reports in pamphlet form and send them to applying members only. The buying of novelties is an experiment, from a profit point of view, no matter how much we may try to eliminate it, but a pamphlet of this sort would be a great help to buyers of new sorts in their second year. If necessary, this pamphlet could also be copyrighted. You will note that I am trying to make membership in this Society a necessity to all live Carnation growers.

We need also a permanent committee of finance to devise ways and means for the procuring of the funds necessary to the welfare of this Society.

In closing I want to compliment the Society on its choice of a secretary; a better one would be hard to find; his work has been especially arduous for this first year, but it certainly has been faithfully performed. Our secretary should have at least \$250 per year, and the work would be cheaply done at that.

Let us all work toward getting this Society to the position it should hold, and the prosperity of it will bring prosperity to all its members.

The secretary's report was then read and was succeeded by that of Treasurer Fred. Dörner as follows:

Treasurer's Report, Jan. 24, 1910

EXPENDITURES

Paid by orders on Treasurer.....	\$826.48
Balance cash on hand	283.68
	\$1,110.16

RECEIPTS

Cash from Secretary	\$759.30
Cash, interest from Permanent Fund.....	123.28
Balance cash on hand, Jan. 25, 1909.....	227.58
	\$1,110.16

PERMANENT FUND

Reported January 25, 1909.....	\$2,375.31
One life membership	50.00
	\$2,425.31

Considerable discussion took place upon the subject of next place of meeting, but no choice was made. It rests between Boston and Milwaukee and a decision is to be made on Thursday. If Boston is decided upon, the convention will probably be held in conjunction with the National Flower Show.

The judges presented their report which was, on motion, accepted.

W. T. Bell then read his paper, which will be found in another column of this issue.

A smoker was given by the Pittsburgh Florists' Club, on Wednesday evening, in the main dining room of the Fort Pitt Hotel and the large room was comfortably filled by the guests. An excellent program of vocal and instrumental music was provided and all enjoyed themselves immensely.

Many visited the plant of the H. J. Heinz Co. on Wednesday afternoon, the famed home of the "57 varieties." They were hospitably entertained and souvenirs were distributed.

On the evening of the first day a ladies' theater party was given in honor of the visiting ladies of members of the A. C. S. Taxicabs conveyed the guests to the theater, leaving the Fort Pitt Hotel at 7.45 p.m.

On the evening of the first day, John Reimels of Woodhaven, N. Y., was prostrated with an attack of heart trouble and was taken to a hospital.

Judges' Awards

Section A.—100 Blooms

SEEDLINGS OR STANDARD SORTS

White.—1, Cottage Gardens Co., Queens, N. Y., with Alma Ward. 2, Stafford Floral Co., with White Perfection.

Flesh Pink, being those shades of a Flesh or Salmon color.—1, F. Dörner & Sons Co., Lafayette, Ind., with Seedling No. 42. 2, Same firm with Pink Delight.

Light Pink, being those lighter shades of Pink verging on the true Pink, and lighter than Mrs. Lawson. 1, Cottage Gardens Co., with Mrs. C. W. Ward. 2, Joseph Heacock, Wyncote, Pa., with Dorothy Gordon.

Dark Pink, being as dark or darker than Lawson, including all so-called cerise not dark enough to be called Red. 1, Nic Zweifel, North Milwaukee, Wis., with Bright Spot. 2, E. G. Hill Co., Richmond, Ind., with Afterglow.

Red or Scarlet, to cover all shades generally included in these colors. 1, Cottage Gardens Co., with Beacon. 2, F. Dörner & Sons Co., with Scarlet Glow.

Crimson, to cover those shades known as Crimson and Maroon.—1, W. W. Coles, Kokomo, Ind., with Mrs. Walter W. Coles.

Any other color, to include any color decidedly distinct from other colors specified.—1, H. Weber & Sons Co., Oakland, Md., with Torador. 2, Chicago Carnation Co., Joliet, Ill., with Conquest.

Section B.—50 Blooms

OPEN TO ALL VARIETIES DISSEMINATED PRIOR TO JULY 1909

White Enchantress.—1, A. F. Lorch, Allison Park, Pa. 2, A. C. Brown, Springfield, Ill.

White Perfection.—1, Chicago Carnation Co. 2, Wagner Floral Co., Columbia City, Ind.

Any other White.—1, A. F. Lorch, with White Lawson. 2, W. N. Rudd, Morgan Park, Ill., with Mrs. J. C. Vaughan.

Enchantress.—1, Finleyville Floral Co., Finleyville, Pa. 2, Wagner Floral Co.

Any other Flesh Pink.—1, F. Dörner & Sons Co., with Pink Delight.

Rose Pink Enchantress.—1, F. Dörner & Sons Co.

Winsor.—1, A. F. Lorch.

Winona.—1, Finleyville Floral Co. 2, E. G. Hill Co.

Mrs. Thos. W. Lawson.—1, A. F. Lorch.

Afterglow.—1, E. G. Hill Co. 2, A. C. Brown.

Any other Dark Pink.—1, Chicago Carnation Co., with Aristocrat.

Victory.—1, F. R. Pierson Co., Tarrytown, N. Y.

Beacon.—1, Chicago Carnation Co. 2, F. R. Pierson Co.

Any other Scarlet.—1, Chicago Carnation Co., with Andrew Carnegie.

Any other Crimson.—1, J. D. Cockcroft, Northport, L. I., with Harvard.

Section C.—Disseminators' Prizes

FOR VARIETIES DISSEMINATED THE PREVIOUS SEASON.—50 BLOOMS

Pink Delight. Premiums offered by F. Dörner & Sons Co., Lafayette, Ind.—1, Chicago Carnation Co. 2, E. G. Hill Co.

Mrs. Chas. Knopf. Premiums offered by Chas. Knopf Floral Co., Richmond, Ind.—1, Chicago Carnation Co.

May Day. Premium offered by E. T. Grave, Richmond, Ind.—1, E. G. Hill Co. 2, W. Frank & Sons, Portland, Ind.

O. P. Bassett. Premiums offered by Bassett & Washburn, Chicago, Ill.—1, Chicago Carnation Co.

Wa-no-ka. Premiums offered by Wa-no-ka Greenhouses, Barneveld, N. Y.—1, W. A. Rowlands, Utica, N. Y.

Aurle Blossom. Premiums offered by Wa-no-ka Greenhouses, Barneveld, N. Y.—1, W. A. Rowlands, Utica, N. Y.

Georgia. Premiums offered by Jas. D. Cockcroft, Northport, L. I., N. Y.—1, Walker Thomas, Stony Brook, L. I.

Gov. Deneen. Premiums offered by A. C. Brown, Springfield, Ill.—1, Chicago Carnation Co.

Alvina. Premiums offered by Hy. Eichholz, Waynesboro, Pa.—1, Chicago Carnation Co.

Section D.—The American Carnation Society Medals

FOR BEST VASE OF 100 BLOOMS, ANY VARIETY, ANY COLOR

The gold medal was captured by F. Dorner & Sons Co., with Hoosier Lad.

The silver medal was awarded to Richard Witterstaetter with Seedling No. 1400 E, (J. A. Valentine).

The bronze medal was taken by Dailledouze Bros., with White House.

Section E.—Special Medals of the Society of American Florists

For the best vase of 50 blooms of a Carnation not yet disseminated. Must score not less than 88 points, and be of American origin. The Cottage Gardens Co., was awarded the silver medal for Mrs. C. W. Ward.

For the second best vase of 50 blooms of a Carnation not yet disseminated. Must score not less than 86 points, and be of American origin. The Cottage Gardens Co. was awarded the bronze medal for Alma Ward.

Sweepstake Prize

This special prize, which was offered at Pittsburgh, Jan. 26, was captured by Cottage Gardens Co., with Alma Ward.

Section F.—Certificates of Merit Awarded

To receive a Certificate of Merit a variety must score 85 or more points. Not less than 50 blooms must be shown and the variety must have been bloomed at least three years.

Certificates of Merit were awarded R. Witterstaetter for Seedling No. 1400 E, (J. A. Valentine); also for Seedling No. 1407.

W. W. Coles was also awarded a Certificate of Merit for his variety Mrs. Walter W. Coles.

The Wa-no-ka Greenhouses, Barneveld, N. Y., were awarded a Certificate of Merit for Sultana.

Section G.—Preliminary Certificates Awarded

Open to two year old seedlings. Twelve blooms must be shown. The variety must score not less than 85 points.

Henry Eichholz, Waynesboro, Pa., was awarded a Certificate of Merit for Princess Charming.

Certificates of Merit

The Pittsburgh Cut Flower Co. was awarded a Certificate of Merit for several vases of standard varieties, and a similar award was made to the Lamborn Floral Co., Alliance, O.

Honorable Mention

Baur & Smith, Indianapolis, Ind., showed two vases of Shasta for which they were awarded Honorable Mention.

J. A. Peterson, Cincinnati, was awarded Honorable Mention for a staging of his Begonia, Pride of Cincinnati.

A late addition to the exhibition was Carnation Wodenoth, staged by Frank E. Whitney of Fishkill-on-Hudson, N. Y. The judges scored it 90 points.

Thursday Morning Session

Thursday morning the proceedings opened with the presentation of the report of the Nomenclature Committee, which showed that the Society had registered 21 seedlings and two sports. The report was, on motion, received and filed. The secretary announced that the judges had awarded Princess Charming a new flesh pink, a preliminary certificate, and to Winter Cheer, a variety similar in habit to Alvina, a recommendation for pot culture. Both varieties were staged by H. Eichholz, Waynesboro, Pa. Mr. Charles L. Washburn then read his paper as follows:

The Carnation Society and the Rose Society Should Hold Joint Meetings

The question of the advisability of holding a joint convention of the American Carnation Society and the American Rose Society is best considered from a business standpoint. There are now held the Carnation Society meeting, the Rose Society meeting, the S. A. F. meeting, the various Chrysanthemum Society shows and the various club shows. The aim of these conventions is to do the most good to the greatest number of people in the trade, but by holding so many meetings we are dividing our energies into too many channels, which results in less attention by the trade to each meeting than would be the case if some of these meetings were combined in one. All are good, no doubt, but what is needed is a little more united work.

The importance of a convention of the combined societies would be such that the growers could not afford to overlook it. Men who in the past have felt that the time taken up in attending so many minor meetings could not well be spared, would be glad to attend this one larger meeting. To those whose business necessitates their attendance at both meetings the matter of reduced expenses would be an important item; also, the general reduction of expenses to each Society by having the two share the expenses would be quite an item, while the same amount of business would be accomplished.

The Carnation and Rose men have similar objects in view when holding their meetings, and we certainly need a larger attendance at these conventions. This can only be obtained by increasing the membership of both

Societies. In order to increase this membership, it is necessary to increase the knowledge regarding our business and products to be obtained by attending these meetings. We are in the business as a money making proposition and any knowledge which increases the earning capacity of our houses increases our profits. The advancement in new varieties, better methods of growing and better means of handling the flowers are all questions being constantly brought up at these conventions, so that a wider scope of investigation and a wider discussion of these questions would be obtained by a joint convention; also, thus producing more interest and increasing the good results to be obtained by the members of both Societies attending a joint convention.

There is such a broad field in this matter of new varieties of plants, new methods of constructions, and now everything almost, pertaining to our business that a joint convention would stimulate a larger exhibition of these new things. No one will question the added importance of an investigation and certificate when backed by the united action of both Societies.

The exhibition of flowers would, of course, be larger in a joint meeting and would be a greater matter of interest to the general public. This is a very important point, as the general public are the flower buyers and it is for them our product is produced. The holding of a convention is a very serious expense and inconvenience to those florists located in the city where the convention is held, and a joint meeting would reduce this to one city instead of two.

The field for united work, it can be seen, is so similar for both Associations, and the time for the exhibition of the flowers is best suited for Roses as well as for Carnations, so that a joint convention would be very desirable for both Societies.

The committee on the president's address reported favorably on the president's recommendations and, after considerable discussion, they were accepted with modifications.

The secretary's salary was, on motion of John Birnie, increased to \$250. The question of exhibition entries was settled by a motion made by W. A. Manda, which was carried, that the Society adhere to the rules as now in force, excepting that the penalty for late comers be \$2 instead of \$1.

Engene Dailledouze then spoke on the subject of Mr. Washburn's paper. He said: "This question has come up a number of times and I agree with all Mr. Washburn says. The stumbling block has been that we have tried out dates for our Carnation meetings and our present dates are best for us. We tried March once, greatly to our sorrow. The experience of the Rose people is that March is the best month for them, but our Carnation meeting must be held in January, or early in February. As to the two Societies combining I see no objection, but the Carnation meeting must be as I have said."

Boston the 1911 Convention City

The next place of meeting was then discussed. Nic Zweifel set forth the claims of Milwaukee. F. R. Pierson advocated Boston and that the meeting be held conjointly with that of the National Flower Show.

A lively discussion ensued and, finally, a ballot was taken which resulted in favor of Boston by 57 to 25. W. P. Craig, H. B. Dorner and J. A. Peterson were the tellers.

A resolution was then passed thanking the Milwaukee florists for their invitation and assuring them that their proposition for the following year would receive support.

The members of the Pittsburgh Florists' Club have proven themselves royal entertainers, and their hospitality will be long remembered. The Convention is a gaslight affair. Few of the visitors have left the hotel since their arrival and artificial light reigns supreme.

The Carnations staged in the exhibition hall on Thursday morning, were all practically in as good condition as when first staged.

Secretary Baur's Report

The former secretary, who is now our worthy president, turned over the Secretary's office to me in good condition on April 1st of last year. He had gotten out the annual report and finished up all the work connected with the last convention. Hence my report will not cover the whole year. Our membership roll now contains 394 names; of these 55 came in during the year 1909; against these we have 27 who are delinquent for 1908 and 1909 and will drop them from the roll, except those who may pay up at this meeting. We also have about 50 who owe for 1909, but no doubt many of these will pay up here. During the past year four of our members have been called away from this life. They are Geo. M. Kellogg of Mt. Pleasant, Mo.; Herbert Heller of Newcastle, Ind.; Wm. K. Harris of Philadelphia, Pa.; E. Sutermeister of Readville, Mass. No official notice was received by your secretary of any of these deaths.

The Board of Directors, at their meeting in Cincinnati last August, ordered the secretary to procure more vases and have cases made for storing and shipping the vases from place to place. These have been secured and it is hoped that our vases will be better preserved than could be done heretofore. We have also had made holders for securing name cards and entry cards to the flower vases. You will notice that these are so made as

to permit the cards to be printed and read from both sides. It will be unnecessary for any one to handle the cards to read the name of the variety or the exhibitor. There will be less likelihood of confusion from getting the cards mixed in moving vases around.

The Premium List was gotten out early in December, as is customary, we were this year favored with a splendid lot of advertising amounting to \$285; this will pay for all printing and stationery connected with this convention and will leave a net balance of some \$150 to go into our treasury.

The greatest change in the List is the addition of the new section called "C," relating to the previous season's novelties. It took considerable correspondence to get this section started, but after it became clear to the disseminators they reported liberally and all, except two, have entered their varieties in this section. We hope that this arrangement will be a permanent one and that in the future it will become customary for disseminators to list their varieties in this section without having to be coaxed.

We have also divided the List into sections designated by letters of the alphabet, and numbered the classes in figures. In the judges' books we have adopted a system under which every entry has a different number, and it is impossible for any one to recognize the owner of an exhibit by the number on another exhibit. In order to help make this system work smoothly I will ask this meeting to adopt some rule to limit the time for making entries in the competitive classes.

The rules printed in the List, requiring the payment of \$1 for each entry made after a certain date does not seem to answer the purpose fully. It has never been enforced strictly and, unless a rule can be enforced strictly, it cannot be made fair to everybody. We would suggest that one week before the convention opens the entries for competitive classes must be in the hands of the secretary. That will give him time to get everything into good shape before he leaves home and the greatest cause of errors will be eliminated. The secretary should not be burdened at the convention with work which can just as well be done a week before he leaves home.

In conclusion I wish to thank the members for the interest shown by their ready responses to letters from the secretary; the Vice-President and his local committee for the able manner in which they have handled the local preparations, and most of all to my predecessor, who is now our worthy president, for his kindly advice and guidance during the past nine months.

Officers Elected

President, FRED BURKI of Gibsonia, Pa.
Vice-President, ALLAN PEIRCE of Waltham, Mass.
Secretary, A. F. J. BAUR of Indianapolis, Ind.
Treasurer, FRED DORNER of Lafayette, Ind.

We regret to announce that the condition of John Reimels was quite serious on Thursday, pneumonia having set in.

Carnation Bon Ami

Originated by Geo. E. Buxton, Nashua, N. H. Described on page 127, issue of Jan. 22.

Carnation Admiration

The flower of this variety is of a beautiful shade of pink, somewhat lighter than Winona, and having a beautiful satin finish. The size of the flower is 3 to 3½ inches, of excellent form, well built up in the center, with an arrangement of petals admirable for a fancy commercial variety. In habit the plant is upright, with very little surplus grass, and every shoot making a flower. It is very free and comes into bloom early. The calyx is very tough and seldom bursts. The flowers have been found to keep well and make excellent ship-pers. The variety is introduced by the Chas. Knopf Floral Co., Richmond, Ind.

THE CARNATION

ITS HISTORY, VARIETIES, USES AND CULTURE.

A Paper read by W. T. Bell of Franklin, Pa., before the American Carnation Society, in convention at Pittsburgh, Pa., Jan. 26 and 27, 1910.

So many papers have been read and discussed at the various meetings of this Society that the essayist who can add anything new on the subject of Carnations will be almost as great a curiosity as a six-inch Carnation flower; but, as it has been found to be a good plan in our schools to require the pupils to review the lessons previously studied, so perhaps a general review of the subject that we have met to consider, may be of advantage to all present, and especially to those younger members of the Society who are modest enough to admit that they do not already know all there is about it.

Early History of the Carnation

The Carnation, or, to express the name in strictly botanical terms, *Dianthus caryophyllus*, is, according to Loudon, a native of southern Europe, and has been found growing naturally, in England. The generic name, *Dianthus*, is compounded of two Greek words, meaning the flower of the Gods, or the Deity; which has led certain writers to call it the Divine Flower, a name that might well be exchanged for one more simple and comprehensible. The specific name, *caryophyllus*, has reference to the clove-like fragrance of the flowers; while the common name, Carnation, has for its base the Latin word "carnis," meaning flesh, in allusion to the pink or flesh color of the flowers in their wild state.

There are many different species in the genus *Dianthus*, including the familiar Sweet William; but the one that most nearly resembles the Carnation in appearance is the Pink, with its several varieties.

Where it grows naturally, the Carnation has single flowers, about one inch in diameter, having but five petals; but variation, selection, and cultivation have so changed its character that flowers four inches in diameter are now produced, having a very great number of petals.

The ordinary garden Carnation is a hardy perennial that blooms but once a year; the florist's Carnation of today is undoubtedly the result of changes that have taken place in its habits, through selecting and cultivating the most promising plants produced by natural varia-

tion, until now it may be had in bloom during the entire year; but in the evolutionary operation it has lost a portion of its hardness, probably, because of the higher temperature to which it has been subjected for generations, during the cold season of the year; although this loss could perhaps be regained by reversing the process that brought about the change and gradually hardening the plant until it could withstand the rigors of our severe Winters.

This change from Summer-blooming to perpetual-blooming is not confined to the Carnation; but has been accomplished in the case of other plants.

Chrysanthemums have been grown from seed that was saved from the ordinary seasonal-blooming kinds, that have developed into varieties that have been had in flower every month in the year, and the Rose is one of the most familiar examples of a plant that has been changed from an annual to a continuous bloomer through the treatment accorded to it under modern methods of culture.

The Carnation Then and Now

The Carnation flower today, and especially in this country, is the most popular flower produced by the florists, having overtaken and passed the old-time favorite, the Rose, in the race for popular favor, and instead of being referred to as the divine flower it might very truthfully be called the people's flower.

To become really popular, a flower must possess several of the following qualifications, the first of which is beauty, a somewhat indefinable and elusive quality. In addition, it should have a pleasant odor and be capable of being used in a variety of ways and for various purposes.

Its texture should be such that it will remain in fairly good condition for a reasonable length of time, and its successful cultivation should be so simple that it can be grown and sold profitably at such a price that the ordinary flower-user can afford to buy it freely. All these various requirements are possessed by the Carnation and, in addition, it may be procured at any time during the entire year.

Roses, Violets, Lilies of the Valley, Chrysanthemums and many other flowers will continue to have their ad-

W. T. Bell

Essayist A. C. S. Convention

mirers, and will always be in demand, when in season; but some of them are difficult to produce with profit and the most of them are more expensive, bulk for bulk, than are Carnations. Several years ago, at one of the conventions of the Society of American Florists, an essayist seemed to think that, in a few years, Orchids would become as plentiful and popular as Roses; but the prediction has not been and will not be verified, for two reasons; first, they are more difficult to cultivate and produce and, second, because of this difficulty their price will never become popular.

The development and improvement of the Carnation have taken place within a comparatively recent time, both as regards the size, color, and quality of its flowers and the number of desirable varieties. Thirty or forty years since, the florist was confined mainly to such kinds as Edwardsii, De Grauw, La Purité, Miss Jolliff and Astoria.

Buttercup, one of the best of the earlier yellows, although like most of the later kinds of that color, decidedly bizarre, came later, and was followed by Grace Wilder, Albertini, Mrs. Bradt and a host of other slowly improving kinds, until the list of aspirants for a place on the Carnation stage reached well up into the hundreds.

Daybreak, originated and disseminated by Simmons of Geneva, Ohio, was one of the best and most profitable Carnations of its day, which is now over, and was probably one of the progenitors of the fine variety Eucharis and other kinds having the Daybreak shade of pink. William Scott was another easily grown and useful sort, but it, too, is now eclipsed.

While the Carnation is not a native of this continent, certain writers speak of the varieties now in cultivation

Carnation Dorothy Gordon

A trip to the establishment of Jos. Heacock Co., where the Carnation Dorothy Gordon is grown, proves that the statements made by the company in its advertisements, etc., as carried by the trade press, are not in the least exaggerated. The free blooming qualities of the variety are apparent even to the most uninterested, and its record for price in the Philadelphia market is greater than that received for any other variety. The plants appear very healthy, and respond readily to extra care, a fact which should make it popular with the Carnation enthusiast. The flowers are of an even color, slightly darker than Rose-pink Enchantress, very full, borne on long, stiff stems, and averaging fully three inches across. As to its keeping qualities, any Philadelphia retailer who has handled it will speak in its favor. The reasonable cost of well rooted, healthy cuttings, will no doubt result in this variety becoming as popular as any other on the market today. A vase of these flowers was shown at the Pittsburgh convention.

here, collectively, as the American Carnation; but a better term would be the American varieties of Carnations, as they nearly all originated here.

At the Royal show, held at Newcastle-on-Tyne, England, in 1908, and practically open to all exhibitors, many vases of British Carnations were shown, having, in the main, stiff stems, and large flowers; but the flowers were nearly all of coarse texture, and the most of them had split calyces; decidedly the finest Carnations in the great show were those of American origin.

Its Value in Decorations

Carnation flowers may be appropriately used on many occasions and in a variety of ways; from a single flower on a coat lapel to the most elaborate floral design or other form of decoration.

They are welcomed in the sick room, or the hospital ward, are suitable for the placements or the centerpiece for the dinner table, and clusters or sprays of the flowers, when arranged with taste and skill in combination with a sufficient amount of suitable greenery, are much asked for and appreciated for funeral occasions; while no flower can be used to better advantage in a pleasing arrangement to place beside the door of the house where death has entered in lieu of the somber crape; and, because of their excellent lasting quality, they are one of the very best flowers to use for sending a long distance, or when they are required to be kept for a considerable time before being used.

If it were not for being so wasteful many of the arrangements of Carnation flowers would be improved in appearance if Carnation buds and foliage were combined with the flowers.

For the uses enumerated, the Carnation flowers should be of good quality; to produce such, the propagation and culture of the plants, and the gathering and care of the flowers after being grown, must be carefully and properly attended to, necessitating unflagging attention on the part of the grower. This is not alone the case with the Carnation plants and flowers, but applies as well to all

the stock in the florist's domain, a fact which all plantmen do not seem to appreciate.

If eternal vigilance is the price of liberty, it is no less the price of good plants and flowers; the difference in the success of various florists may generally be ascribed to the continuous care bestowed on his stock by the successful grower, and the intermittent care and partial neglect, in this respect, of his less successful neighbor.

The Propagation of Carnations

There are different ways of propagating Carnations; the older English authorities seem to have preferred layering, which is necessarily a very slow method, practically unknown in this country. Another means that they practiced was propagation by pipings; these were practically the same as our cuttings, and the directions for the operation are as follows: "Prepare as many pots as are wanted. Fill them nearly full of compost and the remaining space with silver sand. Prepare the pipings by cutting off a stem quite smooth at the third joint; then carefully slit the joint just through and insert the pipings in the sand."

How would our growers, who propagate Carnations by the million, like to be confined to the slow and tedious method just outlined? Undoubtedly, their patience and their pots, with some of the other material mentioned, would soon become exhausted.

Judging from the directions concerning many of the horticultural operations described in the English works on gardening, and especially those of an early date, silver sand was a very important substance in the gardener's equipment; and, while it is a very nice and cleanly material to work with, we have proved by long practice that it is not indispensable.

The best material from which to make Carnation cuttings are the shoots springing from the sides of the flowering stems but taken before they are old enough to have developed the three joints mentioned in the directions concerning pipings, just read. These will make better plants than the tips of terminal stems, such as are produced on young plants, and which are sometimes used.

Cuttings should never be taken from plants showing any signs of disease, such as yellow or spotted foliage, notwithstanding the temptation to do so in the case of varieties that it is desired to increase to the limit.

Only so many cuttings should be taken off at once as can be prepared before they show any symptoms of wilting; they should be handled at a distance from stoves or hot pipes, and not in bright sunshine; it will do no harm to freshen them by a gentle spray of cold water if it seems necessary.

While some growers insert the cuttings in the sand almost in the condition in which they are taken from the plants it is very much better to prepare them first by judicious pruning, as follows: Pull off two or three of the lowest leaves, but without removing too much of the substance of the stem of the cutting, then, with a sharp knife, shorten any of the remaining leaves that are long enough to require it, leaving from one to two inches of the base of each leaf.

The cutting bench should have been prepared in advance,

with three or four inches of clean, sharp sand, free from loam or any vegetable substance, and should be provided with some means of keeping up a gentle under heat.

It is the practice of some of the best propagators, and a very good one, too, to renew the cutting bench with fresh sand after each lot of cuttings have been taken out; but it is a laborious operation and not absolutely necessary. If the sand is stirred and loosened, and thoroughly soaked with boiling water, applied with a watering can having a spray rose on the spout, so as to destroy any fungoid growths in the sand, it may be used for a number of times with safety, as has been proved by actual experiment.

In preparing the bench to receive the cuttings, the sand, which should have been thoroughly watered some time previously, should be firmed by using a clean brick, or something similar, and scored for each row of cuttings with a table knife. If the cuttings have been properly trimmed, the rows should be about two inches apart, and the cuttings placed one-half to three-quarters of an inch apart in the rows. They should be inserted from one-half to one inch deep, depending somewhat on the condition of the sand and the character of the cuttings, and should be firmed by pressure of the finger and thumb on the sand, during the operation of setting them, which may soon be learned. As soon as a lot are set, they should be given a good watering with a can such as recommended for sealding the bench, and should never be allowed to get so dry that the sand becomes light colored and dry to the touch, or the cuttings show any signs of wilting; the watering should be done, if possible, during bright days and in the morning. While the bench should have all the light it will bear without injury to the cuttings by making them wilt, it will be necessary to shade it from bright sunlight, at least until the cuttings have become so thoroughly established that sunshine does not harm them.

As soon as the cuttings have formed roots half an inch in length they should be potted in two-inch pots; using a good quality of potting soil with little or no fertilizer in it, and firming the plants well in the pots. This course is preferable to planting the cuttings in trays or boxes of soil, a plan followed by many growers. The plants should now be placed in a rather cool, well-lighted house, having about the same temperature as that in which the cuttings were rooted, and one in which top ventilation can be given when needed.

For a short time, at first, they will require to be shaded from bright sunshine, but the shading should be dispensed with as soon as possible.

Watering Requires the Greatest Attention

One of the most important things requiring attention at this stage of the growth of the plants is the watering. They should never be allowed to get quite dry, and, on the other hand, should never be watered while the soil is wet; as neglect or carelessness in this respect is likely to lay the foundation, or rather sow the seeds of future stem rot. This operation should be in charge of the most experienced and careful person employed in the establishment; if the watering is done with a hose it

should have a nozzle furnished with a spray rose, having a flat and not a convex surface, perforated with very small holes.

To water plants as it should be done is one of the most difficult things to teach a beginner, and should never be entrusted to any one who cannot do it properly. A careful and experienced man knows by looking at plants when they need water and how much they need.

While probably a majority of plantmen use an open hose to water with, regulating the amount of the flow with the end of the finger, this is not nearly as good a plan as to use the spray nozzle, as recommended for the newly potted Carnation plants. The flat perforated surface of the rose concentrates the spray, while a convex surface would cause it to be too much scattered, making it difficult to apply the water just where it is needed without wetting other plants standing near that may not require irrigation at the time. For general greenhouse use the perforations in the rose should not be very large.

General Culture Notes

Weeds should not be permitted to grow among the young Carnation plants and fumigation must be attended to regularly, to keep down aphids, while the under side of the foliage should be sprayed with a good force of water to keep the plants free from red spider. As soon as the stems attain the proper height, say five inches, they should be stopped; this will induce the formation of side shoots, and, when the pots are well filled with roots, the plants should be repotted into three-inch pots; and so on to four- and five-inch pots for those that are to be benched from pots.

Late propagated plants, that are to be grown outside during the Summer, may be planted from two-inch pots; or, better still, from three-inch if they have needed repotting before being planted out.

Propagation by cuttings may be carried on from November until April; but January, February and the early part of March will be found the best time for this operation.

The proper time for planting in the field will vary with the latitude and the season; this should be done as early as it can be with safety, so that the plants may become established and make some growth, before the hot weather of Midsummer.

If the young plants have been hardened in a cold-frame, for some time previously, they may be planted out sooner than if taken directly from the warmer greenhouse.

The soil in the field, where the plants are to be grown, should be of a loamy nature; care should be taken to have it well pulverized and free from stones and other obstructions.

If a horse cultivator is to be used, the rows should be two and a half or three feet apart; if to be cultivated by hand they will only require to be eighteen inches apart, and, in either case, the plants should be set about a foot apart in the rows.

A half inch rope should be tightly stretched where

Carnation, Mrs. C. W. Ward

Carnation, Alma Ward

Carnation, Mrs. Thos. Harvey

Leading Carnations at Cottage Gardens Co., Inc., Queens (L. I.), N. Y.

At Pittsburgh, Jan. 26, Mrs. C. W. Ward was awarded the S. A. F. Silver Medal; Alma Ward captured the S. A. F. Bronze Medal, also a Sweepstake Prize.

Beacon Carnation at White Bros., Gasport, N. Y.

The above illustration of a house of Beacon Carnation at White Bros.' range, Gasport, N. Y., was taken Jan. 9. The house is 42 ft. wide and 175 ft. long and holds about 8000 plants, which were benched in early August.

Among the Carnationists

**Does the Carnation Lead the Rose
In Commercial Importance as a
Cut Flower Under Glass?**

Poehlmann Bros. Co., Morton Grove, Ill.

Referring to the subject of whether the Carnation leads the Rose in commercial importance, I would judge that the retailers would be better able to answer that question. When it comes to actual numbers of plant growers I believe the Carnation leads, because of the numerous small growers who do not force any Roses. Among the large growers you will find the Rose occupies far more space than is devoted to Carnations. With us Roses are the principal item, and will account for 75 per cent. of our total sales. I think you will find this condition practically true of all large Rose and Carnation growers around Chicago. This is also true of many large establishments located in other sections.

The main feature to talk about at the Pittsburgh convention would be that of the Carnation Society and Rose Society joining hands, and making "one great big convention" instead of having two. It's a bad waste of money and time, and represents a loss of at least \$10,000 to those who attend the shows. I have every reason to believe that a conservative figure, and there remains not a doubt in my mind but what if this question were put to a vote, a large majority of the members would vote in favor of a consolidation, fathered by the national S. A. F., for the best interest of the craft.

AUGUST F. POEHLMANN.

C. C. Pollworth, Milwaukee, Wis.

This subject, to get at it accurately, as to whether or not the Carnation leads the Rose in commercial importance, would require a broad investigation covering most of the leading flower growing sections of the country.

In giving my personal opinion, I believe the Carnation has passed the Rose as a commercial flower; Rose growing being confined more to specialists, while Carnations are being grown by nearly every florist controlling some glass. With the rapid strides the Carnation has made the past few years, considering flower for flower, it has passed the Rose also on the general average in the quality of flowers.

A grower with a limited amount of glass will not grow Roses, but he will take readily to the Carnation as his "bread and butter flower."

Roses, of course, will always be in demand and must be supplied for certain occasions, but when you take the present varieties of Carnations such as White Perfection, Enchantress, Victory, Beacon and a few others, when well grown they certainly do make inroads on the sale of Roses in the general varieties, except possibly American Beauty.

The retailer will buy and carry in stock larger quantities of Carnations than of Roses; likewise, when selection is left to him in the making up of funeral work, Carnations are invariably used, he being able to give his customer a better showing for the money, especially if the amount he has to expend be moderate. Likewise the dealer will always ask a much larger percentage of

profit over the cost price on Roses than he will on Carnations; this also is a boost for the Carnation.

Roses naturally should bring a higher price than Carnations, figuring the additional expense in growing them; likewise the shrinkage in the poorer grades when sorted over in the wholesale markets cuts into the average of returns, so perhaps from a profit standpoint between the growing of Roses and Carnations there is little to choose from. Carnations have proved to be the popular flower as witness the tremendous quantities now being grown and sold, likewise the enthusiasm displayed by Carnation growers at all exhibits, the large attendance at the A. C. S. meetings, also the interest shown in the many new varieties disseminated; all these facts demonstrating plainly the commercial importance of the Carnation as a florist flower grown under glass.

Milwaukee, Wis.

C. C. POLLWORTH.

W. W. Coles, Kokomo, Ind.

Does the Carnation lead the Rose in commercial importance as a cut flower under glass? During the last five years the Carnation has gradually been forging to the front, and today I firmly believe there are more dollars spent for the Carnation than any other cut flower grown. I grow both for the wholesale and retail trade and find the greatest call for Carnations. The wonderful improvement in the varieties which are grown today are no doubt responsible for the popular favor the Carnation now enjoys.

Before the advent of the Lawson, Enchantress, White Perfection and Beacon, the Rose was the general favorite. Lawson will not be grown by us after this year. Herebefore it has been one of our best paying varieties with

the exception of last year and this. Now it is the poorest one on our place.

The only white varieties we grow are White Enchantress and White Perfection. Our best pink are Enchantress, Rose Pink Enchantress and Afterglow; the latter will be grown in larger quantities next year. We are growing a few May Day and wish we had more. This is one of the most pleasing shades of light pink we have; a good healthy grower and a free bloomer. Beacon and Victory are both good reds, and we shall continue to grow them for some time.

WALTER W. COLES.

E. A. Richards, Greenfield, Mass.

As to whether the Carnation leads the Rose or not, my own experience is that where I sell or use 100 Roses I sell or use probably from 500 to 800 Carnations. I have never kept any record for comparison, but think the figures given not far out of the way.

I have no novelties. I am growing this year Lady Bountiful, White Perfection and Pres. Seelye for white; Seelye I shall probably drop this year, as it comes too late; it will give us nice flowers from now on but it is too late. White Perfection I shall grow more of next year, and also Lady Bountiful, which I think are the best all season whites I have ever tried. In dark pink I am growing Viola Sinclair, which I think the freest bloomer of anything I ever saw. For light pink I have Winsor and Rose Pink Enchantress; the latter will be dropped this year, as it splits too badly. Enchantress I am growing, but am looking for something to take its place, as it seems to be going back on me. I shall try a few May Day next year. For scarlet I have Beacon, which I think is hard to beat, and Prosperator which will be dropped this year, as it is too small. For dark red I have Harry Fenn and Harlowarden, and am looking for one with the color of Fenn but larger in size and more free in bloom.

The varieties that seem to do the best here are Beacon, Viola Sinclair, Lady Bountiful and Winsor.

E. A. RICHARDS.

Charles Weber, Lynbrook, L. I., N. Y.

The Carnation establishment of Charles Weber, Lynbrook, Long Island, N. Y., is well known as the place from which that most popular variety, Victory, was disseminated; and it may gain further distinction through another variety, a fringed, light pink seedling which has been named Brooklyn, and which on its appearance before the New York Florists' Club, in December last, scored 85 points. This seedling is a clean, healthy grower, prolific enough to figure in the "bread and butter" class. It throws long stems early, with flowers of good size, carried erect. It has been well tried out and is this year liberally benched with entirely satisfactory results. It will be seen at the Pittsburgh exhibition and should prove a good scorer. Mr. Weber, with R. G. Wilson, the Brooklyn florist, are preparing to disseminate it.

One of the sights of the Weber establishment just now is a house of Carnation Imperial. This variegated variety was disseminated in 1906 by John E. Haines of Bethlehem and Alex. J. Guttman of New York, but is not commonly grown. Mr. Weber is showing it in fine shape, large, handsome flowers on stems over 3 ft. long. He claims it is a very profitable variety to grow, and brought fancy prices during the Xmas holidays. Pink Delight is proving a favorite here, having made an excellent record.

House of Carnation Imperial at Chas. Weber's, Lynbrook (L. I.), N. Y.

We wish to impress upon our readers that all questions intended for this department must bear the name of the sender, must necessarily for publication but as a guarantee of good faith. We will endeavor to answer all questions submitted to us by subscribers, but we cannot recognize anonymous communications.

IDENTIFICATION OF PLANTS

When sending specimens for names correspondents should send some lower leaves of herbaceous plants as well as upper ones, and of all plants, flowers and seed vessels if possible. In addition to this, if stated whether it be shrub, tree, herbaceous, wild or cultivated, location where growing. It would often enable identification of specimens difficult to determine otherwise.

(25) **Congo or African Violet.**—Kindly let me know the botanical name of a flower called the Congo Violet. I have been unable to find any reading matter about it under that name. I heard the flower mentioned and am desirous to know its description.—E. A. M., New York.

—Saintpaulia is the botanical name of

the Congo Violet, and it is a plant which, when in bloom, presents a beautiful appearance. It needs treatment such as would be necessary to grow Gloxinias well, and the plants bloom for a long period, after which a season of rest is found beneficial. Young stock is secured by leaf propagation or from seed. Care is necessary to keep water from foliage, as the leaves are very liable to be spotted.

(27) **Sweet Pea Troubles.**—Enclosed find some specimens of my Sweet Peas, which as you will see are attacked by some kind of a disease, causing them to dry up and fall off. Will you kindly let me know the cause of this and the remedy?—W. A. H., New Jersey.

—Your specimens arrived very dry, but our opinion is, after examining them under a magnifying glass, that a very minute worm is eating the pith of the stems, thus causing you the trouble. If you split an affected stem you will be able to trace the course of the worm. Would suggest that you spray vines with some insecticide and use bluishphide of carbon in the soil (see answer to E. L. in issue of January 15) to kill larvae.

(28) **Ants on Carnations.**—I am troubled with the small black ant on Carnations; they eat out the flower and I want a remedy for them or a recipe for poisoning them. I also want to know the best way to rid the same plants of thrip. I have been using Roseleaf extract of tobacco, but it seems to be rather a hard job. Is the extract or tobacco dust the better of the two?—A. C. California.

—For ant remedy see reply to E. L. in our issue of January 15. For thrip, spray with Aphine or Nicotidene. A mild fumigation of hydrocyanic gas would also prove effective. See also

reply to W. S. S. in issue of Jan. 22. Tobacco dust is not very effective.

(29) **Best Plants for U. S. Flag Bedding Design.**—I would like to ask, through the Question Box, if any readers would give a list of the best plants in flowering varieties, and also in foliage, to bring out the best colors in red, white and blue in a design planting a United States flag, for the coming Summer.—J. T., West Virginia.

—We should be glad to have the ideas of readers on this question.

(30) **Geraniums Blooming Well.**—Will you kindly tell me if all my Geranium blossoms are likely to turn out as the enclosed. The cuttings were obtained from only plants with the largest and most perfect blossoms. Is there anything I can spray them with to have them come perfect, or shall I discard them and get a new lot? The plants are in 3" pots (for decoration) and garden bedding in Spring. They are nice healthy looking plants but of no use with such few buds to open.—C. G. D., Penna.

—As long as your plants appear healthy we see no reason why they should not have larger blossom trusses. We see no disease in those sent here for examination. Would advise you to wait awhile, as a small Geranium plant can hardly be expected to give as perfect blossoms as a full grown plant, especially as your plants are now making roots and foliage, and when pots are filled with roots your plants should produce better blossoms as the season advances. Geraniums do not require a very rich soil.

(31) **Manure for Name.**—We have been subscribers of the Exchange for quite a few years and would like to ask of you a favor. We purchased

some fertilizer, as per sample enclosed, for sheep fertilizer, and we think it nothing more than horse manure. Will you please give, through the columns of the Exchange, as early as possible, your opinion as to what it is.—A. L., New York.

—Your sample is sheep manure, and will make a good fertilizer, although not so quick to show results as is the pulverized variety. One part of the manure to three parts soil should make a fine top dressing for Carnations, etc.; put it on about half an inch thick over the benches.

(32) **Gloxinias and Begonias for Decoration Day.**—1. When is the proper time to start these bulbs so that they will be in bloom about May 30? 2. What treatment should they have and what temperature; what soil is best adapted for them?—C. V., N. Y.

—1. These bulbs should be started now. 2. Place bulbs right side up in a mixture containing half sand and half leaf mold. Flat boxes may be used for this purpose, into which put about an inch and a half of the mixture, burying the bulbs about an inch apart, so that just the crown shows. Put the boxes containing bulbs in a warm greenhouse, and keep moist until root action has commenced. As soon as growth has fairly started, pot into 3" pots, using a soil containing one fifth sand, one-fifth ordinary soil, three-fifths leaf mold. Mix thoroughly after adding a little bone meal. Keep water from the leaves of the Gloxinias. Watering with a long-necked can will be the better way to secure good plants, as constant moisture on the foliage turns the leaves brown. A temperature of 60° to 65° at night will be sufficient. Give plants plenty of drainage and room as they develop.

Will be Ready to Mail Out February 5 The Florists' Exchange Design Book

HANDSOMELY PRINTED ON ENAMELED STOCK, AND CONTAINING 80 PAGES,
SIZE 9 x 12 INCHES, WITH STRONG PAPER COVER.

The work contains a reproduction of some 216 Designs, such as:

Bridal Bouquets, Broken Columns, Christmas Wreaths and Baskets,
Easter Baskets and other Easter Designs, Casket Covers,
Gates Ajar, Floral Chairs, Harps, Horseshoes, Lyres,
Pillows, Easels, Panels, Anchors,
Wreaths in great assortment, Standing Wreaths, Standing Crosses.

Miscellaneous Designs in quantity, including Decorated Automobiles,
Railway Designs, Flags, Ships and Steamers, Shields, Broken Wheels, &c.,
Emblems, Table, Mantel and Mirror Decorations and Christmas and Church
Decorations.

Page 80 shows forms for Masonic, Fraternal and other Orders, for which
wire designs are kept in stock by the supply houses.

TERMS OF SALE

The Florists' Exchange for two years and one copy
Design Book, \$2.50, delivery prepaid. This offer is open
to new subscribers or to renewal subscriptions. One
copy of the Design Book to present subscribers for 75c.,
delivery prepaid. No copies obtainable except as above.
Money refunded if book is not satisfactory to purchaser.

Only one copy can be supplied at the 75c. rate. Subscribers desiring more than the one copy can secure them at the rate of \$1.00 each, postage prepaid.

Handsomely and durably bound, in stiff board covers, with 32 blank leaves for pasting in clippings of other designs, at One Dollar additional to above prices.

All prices include delivery prepaid.

The Florists' Exchange, P. O. Box 1697, New York City

CLUBS and SOCIETIES

Horticultural Soc. of Newport, R. I.

A regular meeting of this Society was held on Tuesday evening, Jan. 25. On account of stormy weather the attendance was not large. President James Robertson in the chair. The following gentlemen were elected a committee on "Papers and Discussion" for the year: President Robertson, John P. Hammond, Bruce Butter-ton, Richard Gardner and John Forbes. For the next meeting, Feb. 8, the subject chosen is "Exhibitions." Each member of the committee will take part in opening the discussion, as follows: "Exhibitions, their Utility and Mission," by Pres. Robertson; "Preparing for the Exhibition," by John P. Hammond; "Staging and Arranging Exhibits," by Bruce Butter-ton; "Judging," by Richard Gardner; "How to Secure the Attendance of the Public at the Exhibition," by John Forbes. A Ladies' Night is also being planned for ALEX. MACLELLAN.

Nassau County (N. Y.) Hort. Soc.

The annual dinner of this Society was held at the Oriental Hotel, Glen Cove, Tuesday, Jan. 26. It was more than a success; it was a grand feast, which will remain forever a shining star in the memory of the lucky participants.

Thanks are due to Messrs. Eccles and McKenzie for the decorations; the tables were loaded with Palms, flowering plants and Carnations. In the center of the main table was a magnificent mound of Lily of the Valley, so uniform in shape, and so beautifully grown, that Mr. McKenzie is to be congratulated on his skill in bringing out this flower to almost perfection. President Duthie wished all a hearty welcome, and for over one hour all were kept busy, doing credit to the moon.

The winners of last year's point competition were presented their long sought trophies by President Duthie. Paul Reul received the gold medal; V. Clery receiving the silver trophy, and G. Wilson the bronze medal.

Among the speakers Mr. A. T. Bod-dington spoke of the S. A. F. & O. H. and its great work, adding special emphasis in mentioning the Sweet Pea Society. Mr. Chas. Totty pleased his hearers by his remarks and the account of his short trip to Palestine. He brought our hearts to our mouths by his generous offer of \$50 to the Society for our Fall show, and received our hearty thanks through President Duthie.

The toast to Bonnie Scotland and Bobbie Burns was well rendered by Mr. McNeil, and was followed by a selection of the bagpipes by our friend Robert, which was enjoyed by all.

George Burnett was in his glory while, speaking of the tender feeling the seeds-man generally has toward the gardener in general.

A short sketch on the inside history of our Society was given by Oscar E. Addor.

OSCAR E. ADDOR,
Cor. Sec.

Bowling Club News

The Astoria Florists' Bowling Club (L. I.), New York, gave a "Ladies' Night," Tuesday, Jan. 25. Thirty-six attended and all had an enjoyable time. The Club provided prizes to be competed for by the ladies and, in turn, the Ladies' Bowling Club, which is composed of the wives of the members of the Florists' Bowling Club, provided six prizes to be competed for by the gentlemen. Each lady received a prize. The gentlemen's awards were: William H. Siebrecht, Sr., for the greatest number of strikes; John Miesem for lowest score in the first game; Herman H. Lorenz for making nearest to 77 in any frame; John Donaldson for the greatest number of spares; John Boese for the lowest score in the second game; Philip Einsman for making nearest to 95 in any frame.

The prizes received by the ladies consisted of fancy dishes, plates, bric-a-brac, vases, etc. Prizes received by the gentlemen were two boxes of cigars, cigar case, automatic cigar lighter, florist knives, muffler and a diamond ring.

The Ladies' Bowling Club bowls Tuesday afternoons and the men's club bowls in the evening. On this occasion the ladies remained in the building and the gentlemen joined them for supper. During the supper ex-captain John Miesem was presented with a token of the high esteem in which he is held by the Club and in recognition of his services as captain. All had a very enjoyable time.

This is the second year of the existence of the Astoria Florists' Bowling Club, and it is certain that they will have a prize winning team at Rochester this year. WM. H. SIEBRECHT, JR.

Calendars Received

HENRY F. MICHELL CO., Philadelphia, Pa.—A handy wall calendar bearing an illustration covering the company's new store.

THOMAS MEEHAN & SONS, INC., Dresher, Montg. Co., Pa.—A very handsome calendar on buff board bearing a representation, in natural colors, of "Meehan's Mallow Marvels."

THE BILTMORE NURSERY, Billmore, N. C.—A quarterly calendar, bearing a representation of a spray of Dogwood blossom, in colors.

Carnation Washington

This variety is a Lawson colored sport of Enchantress, the stock of which was recently purchased by the Chicago Carnation Co., from Henry Eichholz of Waynesboro, Pa. As a sport of Enchantress it needs no description excepting perhaps of the color, which is a cerise, the same shade as Mrs. T. W. Lawson, quite different from other Enchantress sports.

Mr. Bell's Paper—Continued from page 171

the row is to be, and the ground should have a final raking and leveling, by drawing a fine-toothed garden rake along the rope, walking backward. Pressing the edge or cutting face of a common garden hoe on the rope, and walking forward with it in that position, will leave a fine mark to plant by when the rope is shifted, and it is better than to try to plant beside a small stretched line.

The plants should be cultivated frequently and the soil kept in a loose condition; especially should it be stirred at the proper time after a rain; no weeds should be allowed to grow; the stopping of the lengthening stems must be promptly attended to, if shapely, bushy plants are wanted. No flowers or flower buds should be allowed to grow, or, at least, not until nearly time to transfer the plants to the houses.

During long continued dry weather a properly arranged system for irrigating, by means of perforated pipes, may be used to advantage; as the plants are all of the same nature, and the conditions likely to be uniform, the objections to such a system when used in a plant house where a variety of plants are grown, requiring varying amounts of water, do not apply.

Planting in the houses may be done from June to October, the earliest plantings being from pot grown stock. Probably the best time for housing the plants from the field is in August and early September.

Ground Beds and Raised Benches

The beds or benches should be of convenient width to work over, say not to exceed five feet where there are walks on both sides, and not more than three feet for side benches.

Both low beds and raised benches have their advocates and good flowers may be grown with either system of cultivation.

Ground beds are cheaply made and, if furnished with cement or brick walls, are durable, but should always have provision for sufficient drainage; raised benches, although more expensive to make and requiring frequent renewal, are more convenient to plant and weed, and stake and spray than low beds are. Each grower should test both plans and decide for himself, after a sufficient trial, which he will adopt. Possibly, as some have already done, he will use both.

Soil Requirements

While with proper attention in other respects Carnations may be grown fairly well in soils that vary greatly in quality, still the time and cost required to procure and prepare the best quality of soil for use on the benches or beds, is well expended.

Sod and the top soil from an old leamy pasture field, cut three or four inches thick, and piled with one-fourth of their bulk of clean cattle manure, a sufficient length of time before using, to attain the proper condition when sliced down and thoroughly mixed, and having a small quantity of air-slacked lime incorporated with it, forms an ideal compost.

Transplanting

The bottom and side boards of the raised benches that will come in contact with the soil, should, before filling, be thoroughly coated with whitewash made from freshly slacked lime and having a small quantity of sulphur added. Five inches of soil, prepared as directed, is sufficient for the raised benches.

In digging the plants in the field, a reasonable amount of soil should be left attached to the roots, if possible, and they should be carried and handled so carefully, that this soil will not be shaken from them. Contrary to what the novice might expect, the best results in transplanting will be obtained if the soil in the field is dry when the plants are dug, rather than if it is wet. The plants should be transferred to the benches as promptly as possible, after digging, so that the roots may not become too dry.

Probably a majority of planters firm the soil around the newly set plants by pounding it with the closed fist but, as this firming is an important part of the planting operation, a better plan is to use a brick hammer or something similar, as a tamper for the purpose. Care should be taken not to set the plants any deeper in the soil on the benches than they were growing in the field.

After a few feet of bench has been planted, the soil and plants should be gently but thoroughly dampened, by using the fine spray rose on the nozzle of the hose; if the sun is shining on the benches the plants should be lightly sprayed again after the foliage has become dry; this spraying should be repeated, on bright days, as often as may be necessary; so as, if possible, to avoid having to shade the glass.

After the plants have become somewhat established they should be dusted with air-slacked lime and, as soon as convenient, they should be furnished with the galvanized wire supports, to be lengthened as needed. These, although more expensive, are neater and better than strings stretched between the rows; a plan in common use.

Ventilation, Diseases, Etc.

Carnation houses should be freely ventilated whenever the weather will permit; fumigation and spraying, for aphids and red spider, must not be neglected. Weeds should not be allowed to grow and the surface of the soil should be stirred frequently, when in the proper condition, but not so deeply as to injure the roots of the plants.

As soon as the flower buds are of sufficient size to handle, disbudding should be commenced, and continued persistently throughout the season. In disbudding Carnations, it will be found best to begin at the top of each stem, so that, if by accident the terminal bud is broken off, one of the buds lower down may be left to take its place. On account of differences in habit of growth, certain kinds can be disbudded much more easily than others. Among the kinds that require most time because of their very numerous buds and side shoots, are Beacon, Bassett, and Georgia; among those that can be disbudded much more quickly are Harvard, Victory, and White Perfection.

After the soil has become filled with roots, the application of additional fertilizing material may be made; either pulverized cattle or sheep manure, to be stirred into the soil, or liquid fertilizer, for the making of which there is nothing better than cattle manure. This must be applied in combination with good judgment,

Carnation Princess Charming

This Carnation, shown by H. Eichholz, of Waynesboro, Pa., its originator, at the Pittsburgh convention this week is described as follows: Color, salmon pink; growth, stem, calyx, of extraordinary strength and size, a giant among Carnations; very free bloomer and practically non-splitting.

and neither too strong nor too frequently.

The most important thing connected with the cultivation of Carnations is the watering; the most common failure in this respect, is in allowing the soil to become too dry, even to the extent of causing the plants to droop and wilt. The soil on the Carnation benches should always be slightly moist but should never be watered when saturated.

But little need be said now concerning the filthy Carnation rust which caused so much trouble and dread a few years since, nor indeed of the various other fungoid diseases to which the plant is subject; because, if intelligent care and attention are given to the propagation and culture of the plants, but little trouble will be experienced from any of these diseases; this applies as well to the case of other florist's plants.

If those who complain so much of disease in their stock of forcing Lilies, and lay the blame on the men who grow the bulbs, would give more care to the plants, and especially in the matters of temperature and moisture, the "two tures," as they have been called, would find their stock practically free from disease.

In regard to the style and size of plant houses for the proper cultivation of Carnations ideas differ and will continue to do so; although at present, the tendency seems to be in favor of longer and wider houses; but some of the finest Carnation flowers that have ever been produced were grown in narrow houses; so narrow, indeed, that in some cases they were wide enough for but one narrow bench; but the man who grew them, was careful not to allow the ventilating sash to remain unopened during the whole of a bright sunny day, nor to neglect the watering until the plants hung their heads from thirst. While good-sized houses, well lighted and conveniently arranged, are very desirable, success does not depend so much on the style of house, as on the style of man in charge of it.

Houses 300 ft. in length, should be long enough for any reasonable man, and

Bench of Carnation May Day as Grown by Peter Fisher of Ellis, Mass.

Of May Day, Mr. Fisher says: "It is a beautiful Carnation and a grand sort for a man with a home trade."

Enggren's Deep Pink Seedling Carnation Which Scored 85 Points at N. Y. Florists' Club, Jan. 10, 1910

E. L. Enggren, Aqueduct, L. I., N. Y.

equal span houses, running north and south, do very well for growing Carnations in.

The number of varieties that are grown with profit at the present time is so great and is being so persistently added to that it seems unnecessary to specify them, or to say which are the most profitable; the beginner in the business will do best to consult some successful grower on this point; and, after having had some experience to add to his stock, for the purpose of testing, some of the most promising of the new introductions and retain those that prove to be desirable.

Production of New Varieties

Notwithstanding the very many fine sorts that are now cultivated better kinds than any now in existence will be warmly welcomed when they appear, as they undoubtedly will; this prospect opens a new field to the thoughtful Carnation grower: the production of new varieties.

He may be fortunate enough to have a sport or variation from an existing kind originate on his premises; which is a short cut to the point aimed at, for which he will deserve no particular credit; but from which, if it is a decided improvement in color, size or habit, over those now grown, he may derive a considerable profit.

The most promising way to proceed, as well as the most interesting, is to resort to cross-fertilization—usu-

ally called hybridizing—which term is in this instance incorrect, as a hybrid is the result of a cross between different species of the same genus, while the various kinds of Carnations, as we grow them, are simply different varieties of the same species.

He will select for his experiments in cross-breeding, parent kinds that seem to combine the qualities he desires in the looked-for progeny; and, after growing and testing a few thousand seedlings, he may be rewarded by the production of a prodigy, which may, indeed, result from the very first pod of seed produced; when he has bestowed on it a plain, short name, somewhat descriptive, if possible, and sold the stock, or a portion of it, for ten thousand dollars, be the same more or less, he will probably feel repaid for the time and trouble expended on its production; if his efforts do not result so profitably he will, at least, be repaid in a measure by the interesting experience he has had.

The intelligent, observant, and careful grower of Carnations will soon be able to distinguish the different varieties he cultivates from each other, by inspection, guided by differences in appearances and habit, that cannot be described in words; possessing this faculty, if mixtures occur in his stock, as they may, he will be able to identify and name the interlopers. He will find the work, in its variety, both healthful and interesting; and, if located within reach of a good market, profitable as well. He may also, as a result of experiments, discover some improved methods in the culture and care of his stock that will be of general interest and benefit, and, having done so, will, of course, report the same to the American Carnation Society.

The Calendar of the Carnation

A Paper read by Jos. H. Hill of Richmond, Ind., before the American Carnation Society, in Convention at Pittsburgh, Pa., Jan. 26 and 27, 1910.

It seems a trifle ludicrous for a person as young and as inexperienced in Carnation culture as myself to stand before a body of representative men such as are gathered here today, and attempt to inform them as to the best way to cultivate Carnations throughout the year; many a member of this Society was successfully growing Carnations before I was born; others, comparatively young men, are already acknowledged authorities on the "Divine Flower," and there are others here present who might, if they so desired, retire on their well-earned laurels and enjoy for the rest of their lives their well-filled coffers, the result of hard work, close application, and an unceasing attention to the demands of their chosen flower. In some portions of my discourse will readily be recognized the teachings of such men as Mr. Wm. Nicholson and the Dailledouze Bros., to all of whom I am deeply indebted for kindly interest and instruction, and unflinching response to any inquiry propounded; other portions of this paper are records of my own observations and experiences, many of the lessons being quite expensive, as every grower has at times cause to confess as he sums up his columns of success and failure.

The middle of November witnesses the first steps looking toward the production of the millions of Carnation plants required for the annual planting in this and other countries. At this time the grower puts into the sand those varieties which fail to make good plants from later struck cuttings, and also those required by those of his customers who insist on "late December or early January delivery." While large numbers are taken in November and December, the bulk of the propagating is done considerably after the holidays, and often quite up to the first of May. It is generally conceded that cuttings taken during January, February and March will give the best results to the average grower, though most of us have seen grand blooms produced in quantity from good April cuttings.

Too much importance cannot be attached to the careful selection of cuttings, which must be strong and healthy and from clean and vigorous plants. The old axiom quoted in Mr. Ward's book that "like begets like" must never be lost sight of in this part of our program.

The cutting bench should have a brick or tile bottom, filled with 3 to 4 inches of absolutely clean sand, and so constructed that a bottom temperature of 60 degrees can be maintained; no draughts should be allowed to strike the cuttings, and they should also be protected from the direct rays of the sun by a perfectly clean and light-weight curtain of muslin.

The cuttings should receive a very thorough watering when put into the sand and the detrimental habit of using the hose whenever they show signs of flagging should be avoided, as this wilting invariably shows that overhead conditions are wrong, and these must be corrected rather than that water should be added to an already saturated sand—the less amount of water used, and still keeping the cutting fresh and plump, the better will be the root formation, and it requires a nice discrimination to properly adjust the condition. Varieties differ greatly in the fiber of the first roots, the Enchantress family being notable for producing good, tenacious roots quickly,

Carnation Shasta

The photograph herewith is of a single bloom of our Carnation Shasta, and shows its fine symmetrical form. The bed (reproduced elsewhere) is one of 1800 plants, from which up to January 1, over 15,000 blooms have been cut, and it is still producing just as heavy as ever. As a money making white Carnation this variety has no equal among those on the market today. Indianapolis. BAUR & SMITH.

while Afterglow, the sturdiest, toughest stemmed variety in existence, must be handled with great care to prevent the loss of roots when taking from the sand, and must be allowed a longer time to mature.

Then arises the question, shall the cutting be dibbled into soil, or potted? The former procedure is the easiest and the quickest, but I feel sure that the extra work of potting and repotting is doubly repaid.

The young Carnation that is planted in the field or in the flowering bench from a pot, with its firm ball of earth, enwrapped with a net work of roots, will show no ill effect from the shift and will start right off into growth without a day's hesitation; while the lifted plant, in handling and resetting, loses most of the soil from around the roots, and receives a severe check from loss of moisture from its tissues, and especially is this the case if not revived by frequent showers soon after planting. Another strong point in favor of the young pot-grown Carnation is exemplified when the plant is lifted from the field either for shipping or for immediate benching, the small pot ball of the Springtime will still be found intact, greatly protecting the roots from serious injury. One might be led to suspect that the speaker was interested in the pottery business, for if all the Carnation men decide to pot all their cuttings before planting, it means millions of pots, but such is not the case; nevertheless, if any of the pot men present want to "fix it"

Carnation Conquest

Conquest is a variegated variety introduced by the Chicago Carnation Co., Joliet, Ill., and is considered to be one of the best of its type since the days of Prosperity, all the good points of which variety it seems to possess, including its free blooming qualities and stiff stem. In color it is a light flesh pink as a background, overlaid with a deep rose pink extending clear through the petals.

Carnation Sangamo

Sangamo, an introduction of A. C. Brown of Springfield, Ill., has been described frequently in the Exchange. The flowers are of a beautiful silvery pink color, well formed, nicely rounded in the center, and do not fade. The plants throw long stiff stems, with splendid calyxes which do not split. It is a variety which comes in early, and is a very fast grower. The picture shown was taken in the houses of the Chicago Carnation Co. of Joliet, Ill., who are disseminating this variety.

Norwood, Craig's Carnation Seedling

This seedling has been grown for some time by the Robt. Craig Co. at 49th and Market sts., Philadelphia, Pa., and was last fall transferred to the company's new establishment at Norwood, Pa., where four benches of it may be seen growing. It has been thoroughly tested and has proved a winner, consequently is to be disseminated next year.

The flowers are pure white, borne on strong, wiry stems. The variety blooms early and continues right on throughout the Winter season, producing good-sized blooms. It is purely a non-splitting variety, and as grown with other varieties in the same house, and given the same treatment, it thrives well. All the plants are in a healthy condition, and under general cultural methods respond quickly, new growths showing from four and five dormant eyes as rapidly as can reasonably be expected after developed flowers have been cut. The flowers open quickly, and they have proved their keeping qualities many times over. Seeing is believing, and a trip to Norwood will convince the most skeptical that it is a bread and butter variety. It was exhibited at the C. S. A. convention, Pittsburgh.

with the speaker, he will be glad to meet them after we adjourn.

We endeavor to get our young stock up into 3's before planting out, but very often in the Spring rush some lots have to remain in 2½'s, and grow on very nicely provided they have not become badly potbound.

When the first warm days come on, about mid-April, the inclination is to rush the stock out into the field, but I feel sure that it is a serious mistake to do so; in the house it has grown up in a temperature of from 45 degrees to 50 degrees, and with moisture judiciously supplied, so that it cannot but suffer and be seriously checked when subjected to cold, severe frosts very often, and worst of all, to wet weather and a falling thermometer.

In an ordinary season if the planting is fully finished by the first of June, good, big, healthy stock is assured, providing your soil has been properly prepared and is possessed of full quantities of plant food.

We have come to the conclusion that cross-checking the plants in the field so as to cultivate them both ways with a hand cultivator is not so good as to give them more room between rows and draw the plants closer together in the rows. By spacing the rows 28 to 30 inches, a horse and spiked-toothed cultivator can be used, greatly lessening the hand labor, besides loosening the soil to a greater depth; the inclination of the hand cultivator is upward rather than downward, thus failing of the intent to a certain degree.

About July 1 we begin to condemn the benches that are not producing a paying quantity of flowers, emptying the worn-out soil, and making them ready for our next year's hopes.

It is now a recognized fact that the returns from Carnations cut in June and July come nearer being "real velvet" than those cut at any other time in the year, providing the plants have had the proper care and have not been neglected during the late Spring rush.

If there is any time in the year when the greenhouse laborer approaches mutiny it is when the task of wheeling out and wheeling in presents itself. If at this particular period of Carnation culture the lady who strolls

through the houses in the Winter remarking on the delights of "cultivating the fragrant blossoms," comes about once more, she certainly finds herself rudely disillusioned, for it is as hard, hot, and disagreeable as working in a quarry, or in the moulding room of an iron mill. The man who perfects a practical, mechanical soil carrier not only has a fortune assured, but the added blessing of every man relieved of this arduous and exhausting work.

A word as to soil. The old prescription "3 parts of soil to 1 of well-rotted manure, together with a generous sprinkling of bone, chopped fine, and put on the benches" is bound to be superseded by more modern methods of soil preparation; there are a number of eminently successful firms in this country who take as long as five years in the preparation of their soil for indoor culture.

The one vital principle to be observed is to have the manure and other fertilizers so thoroughly assimilated by the soil, by means of leguminous crops and clovers, that the food is immediately available to the plant.

So much has been written concerning the careful lifting and quick resetting of the plants from the field that I pass this item of culture, but wish to emphasize the necessity of the use of the Bordeaux mixture promptly on the establishment of the plants, generously applied, and given once thereafter every three or four weeks; it not only acts as a preventive of spot, rust and other minor diseases, but of stem-rot as well.

By beginning in August with a weekly spray of nicotine, and continuing throughout the year, we keep down aphids and also rid our plants of thrip; red spider is controlled by an occasional application of salt water together with syringing under high pressure on bright days.

The antiquated proceeding of mulching heavily in late Summer or Autumn has given way to light top dressings, through which the surface of the soil is always pliable and open to the free air, thus preventing any tendency toward souring.

Lime, wood ashes, sheep manure and pulverized cattle manure, always applied sparingly, constitute the menu for our plants after they are "up and doing."

Plenty of fresh air, whenever it is possible to admit it, insures a healthy free growing plant.

Not until October and November do the plants throw character blooms, but if by January 1 each plant does not show several blooms cut, something is decidedly wrong, either with the variety or with the culture given.

In regard to new varieties. We need them, and they are interesting, and we must not forget that every variety that we grow was once an untried novelty; but it behooves every general grower to ascertain as far as possible the exact value of a "new one" before displacing an "old one" to make room for it in quantity. This national meeting is of inestimable value to Carnation growers in that it shows just how well the standard varieties are holding their early vitality and position, and just what new sorts are surpassing their seniors in brilliance of color, perfection of form and in size; only the finest and most productive sorts can in this day and time pay for standing room in the modern, up-to-date greenhouse.

My Experience with Carnations Under Glass

A Paper read by Vice-President Fred. Burki of Gibsonia, Pa., before the American Carnation Society in convention at Pittsburgh, Pa., Jan. 26 and 27, 1910.

When I consented to read a paper on my experience in growing Carnations under glass I meant Carnations planted under glass in Summer, instead of in the field, as it is still an open question, with most of us, which method is the best, and with your permission I will confine my notes to this subject.

In the early nineties I set out some plants under glass in the Spring, with the object of getting salable flowers in the early Fall, as at that time we did not house Carnations as early from the field as we do of late years. The variety was Mrs. Fisher, which I at that time grew as my principal white, and with which variety I had for some years great success, but only in solid beds, as it did not do well for me on raised benches.

I found that stock out of 3" pots planted under glass in Spring gave me good flowers when such were scarce, say in September, October and November, and bloomed through the season as well as did those planted from the field; they did not make as much surplus grass but grew more slender, with equally as good flowers and longer stems than the field-grown produced, and they could be planted closer.

The soil I used at that time was taken from an ordinary piece of garden ground, as I could not procure sod, being located in one of the city suburbs. This piece of ground was manured heavily in the Spring with cow manure, ploughed in, and kept ploughed through the Summer; sometimes we manured the ground a second time and pulverized the soil with the harrow before taking it into the house.

Another variety I grew with great success in those days was Hector, a scarlet, which did better with me than any other red at that time and for some years after; the only fault it had was weak stems. I had to give it up when the trade insisted on stiff stems. Hector grew very tall under glass in Summer but bloomed much better that way than when planted from the field. I simply could not make Hector pay when planted from the field, and it did its best when I planted it in beds prepared in Spring, and cultivated the same as if under glass, and before Fall built a greenhouse over it.

I am of the opinion that this way of growing Carnations—on beds with no glass over them in Summer, until Fall—would be ideal if it were practical, but I find it impossible where we are located and with the kind of houses we build now.

Some years ago Uncle Jno. Wyland said to me one day about the beginning of June: "I am going to take the glass out of my Carnation house, clean it out and plant the young stock in it in place of into the field." I said to him: "You are going to have a big job on hand." About the end of June I met him again and he said to me: "You cannot believe how quick we got that glass out and put away; it took us about two days." I said to him: "Well! You will find it a bigger job putting it in again in the Fall, and you have now no Carnations to sell, when I can get good money for them, \$2.00 per 100." He never did it again, although the Carnations were a success.

Of late years we aim to plant the Lawson varieties under glass instead of in the field; in this way we get earlier flowers and longer stems than we can from the field-grown plants, and unless we can house these varieties from the fields by the first week in July they hardly give us a first crop before the holidays, and then short stems, with flowers not up to the mark.

A. H. Wingett's Carnation "Lady Algy"

This splendid new introduction was exhibited by Mr. A. H. Wingett at the meeting of the Lenox Horticultural Society, Jan. 15, and was unanimously awarded a first-class certificate.

This is one of the most promising new varieties in sight; in color it is a pure salmon pink, not the washed-out color that is sometimes called salmon, but the true color of the fresh fish. It has been the good fortune of the writer to see it growing this Winter and, among a house containing the best varieties, splendidly grown, "Lady Algy" attracted instant attention. It is a sport from Beacon, and when I say it has all the good qualities of its parent growers will know that there is not much amiss with it, in fact it almost seems to outdo Beacon in vigor and floriferousness.

Several commercial florists as well as a number of private gardeners pronounce it the best thing in sight; certainly we do not know of anything to equal it especially in attractiveness of color, either by natural or artificial light. Mr. Wingett believes it has a future and is handling it on the most approved methods, propagating nothing but the best of cuttings.

EDWIN JENKINS.

New Carnation Mrs. Walter W. Coles

This is described by the originator, W. W. Coles of Kokomo, Ind., as follows: A bright scarlet crimson; good stiff wiry stem. Average flower over 3 inches in diameter. Calyx absolutely perfect. The only variety on our place that never splits, and the most wonderful free continuous bloomer.

We propagate them during December and January and get them into 4" pots by May. I find, though, that unless planted under glass not later than the first week in June, field-grown plants planted end of June or first of July are more satisfactory, as the plants in pots are liable to suffer during June from one cause or another.

The difficulty is this, though, when Carnations have a good sale during June, as they do some years, and your plants are in crop, to make up your mind to throw them out and make room for young stock.

The spaces we are able to plant in May are the beds we had in 'Mums the Fall previous. Following these we take out a crop of Grand Rapids Lettuce, then fill up with potted cuttings of Carnations. We prefer them all in pots as they come from the cutting bench, so that when we plant in the field we have a good ball to them, then the plants will not suffer much if the ground happens to be dry and we cannot get them watered right away. Then, as soon as the plants are in the field, we get this empty space planted with Lawson and Winsor.

The soil we use is sod, ploughed about 4" deep the Fall previous, and before we bring it in we plough in a good coat of rotten stable manure, pulverizing it with the harrow.

I have found that soil prepared this way in the open field is sweeter than when it is put up in heaps, and the labor is less; besides, the sod piles are apt to sour unless they are turned and cut down, which means much work for the laborers.

I have found that other varieties than the Lawsons also do very well when planted under glass in Spring; I rather think nearly all varieties would if we could only get the houses ready for them without having to sacrifice hundreds or thousands of dollars' worth of flowers to do it.

A Carnation, the People's Flower

Read by W. H. Breitenstein before the American Carnation Society at Pittsburgh Convention, Jan. 27, 1910.

Flowers are not more a luxury in modern life than are good clothes, comfortable homes and the many things in daily use which place living above an existence.

There is probably no normal human without an inherent tone of the beautiful, and this finds no commoner expression than in a fondness of flowers.

The indulgence in this expression, it must be conceded, is primarily a matter of cost. He of limited means, and he is legion, must have value received; he it in color, for cheer in dull environment; fragrance, to stimulate the sense; perhaps reminiscent of a happy yesterday or mayhaps to anticipations of the morrow, the influence only for good; nevertheless, it must not be a "flower for a day." The Carnation has been the people's flower.

Its beauty and fragrance, appealing to the senses, and its cost placing it within the means of all having more than enough for the common necessities of life, its hardiness giving prolonged pleasures.

Mark well the assertion: "Has been the people's flower." Perhaps it still is, and may be shall so remain; that, it seems, is "up to you."

From observation it seems to lose in popularity. Why? Certainly not in that it is less beautiful? What is the answer? Is it not in that it becomes more and more ephemeral each year as it loses its hardiness and its fragrance, and gains nothing in beauty?

Admitting that it grows larger, size alone is not beauty, and bulk at the sacrifice of natural charms does not hold the affection of the people. Might it not be well to consider what qualities are most essential to the pleasures of the consumer, without which all efforts are in vain.

Color we have and, from a decorative point of view, no flowers offer more. If given proper treatment one can obtain from the most gorgeous to the softest of tones, and now is perhaps the best time to make the one exception. We need yellow, now come to its own in popularity and deservedly so, as no color diffuses more warmth and nature uses it profusely.

One essential feature to a more general use of the flower is naturalness. One cannot obtain a very artistic arrangement without more natural environment, hence the obvious need of Carnation foliage, with which the flower, for a table decoration (perhaps its greatest use other than for memorial purposes), would be incalculably enhanced, also for personal adornment and for favors.

A full bouquet, with its warmth of color relieved by a touch of foliage, makes an adornment any lady would be pleased to accept and proudly wear.

Simplicity is the keynote of art. Be it in music, painting, sculpture, architecture or any other branch, and its highest expression is faithfulness to Nature as she reveals herself.

Where are the monster Chrysanthemums which were a fad some years since? They have been replaced by the smaller and more natural ones, these having more uses.

What Rose has won favor more than the semi-single, fragrant, hardy ones? The American Beauty, a notable exception, not for the beauty of its color so much as for its fragrance and, especially, its endurance.

Carnation "Sensation"

As described by the originator, Chas. Black of Hightstown, N. J.; Carnation Sensation, a dark pink, originated with him nine years ago. "Although we have tried a number of the new comers as they were put on the market this stands without a rival for us, all things considered. Being planted late (middle of September) the stems are not as long as they should be. Has had no feeding since planting. Always in heavy crop from time of planting until thrown out in July. While the flowers are not as large as a number of the Carnations of today, when taking in consideration that it will produce twice as many blooms per square foot as any of the Lawson family, and after standing the test for nine years, it is still in vigorous health; it will beat most of the \$10 per 100 kinds for 'bread and butter.' After all, this is the practical side of the business. We are not in the cutting business and never disseminated it."

[Unfortunately the blooms sent us arrived at a time when it was impossible to photograph them.]

Setting a New Mark for Carnation Blooms Including a Prize Inducement

Referring to the new Carnation measure which we are just getting ready to offer the growers of the country.

Several years ago the writer circulated among the florists of the country the Kroeschell Carnation Measure, which is so well known. This measure was four inches in diameter. At that time there was no Carnation that would entirely cover the measure, and when asked why the measure was made so large, he stated: "I want to set a mark for the growers to work to, and I am sure that many will make the effort which will result in finally covering the disc."

The prediction of the writer has come true; in an issue of your journal following the last Carnation convention, we note a grower showing a photographic reproduction of one of his Carnations completely covering our Carnation measure, and we certainly wish to congratulate that gentleman from the bottom of our heart.

Today we set a new mark. Our new Carnation measure has been increased to five inches in diameter, and while this may seem to be asking a great deal, yet we feel that the growers are moving forward steadily and surely, and that with this new mark continuously before them, some growers will in time put even this five-inch Carnation measure out of business.

To help the good work along, we offer as a special inducement a prize of \$25 in gold, or a beautiful gold medal of equal value, to the grower who exhibits the best dozen of Carnations at either of the following shows, covering the new Carnation measure of five inches in diameter:

National Carnation Show, Pittsburgh, 1910.

Chicago Flower Show, 1910.

National Flower Show, Boston, 1911.

Chicago, Ill.

KROESCHELL BROS. CO.

CLASSIFIED ADVERTISEMENTS

Cash with Order.

The columns under this heading are reserved for advertisements of Stock for Sale, Stock Wanted, Help Wanted, Situations Wanted, or other Wants; also of Greenhouse, Land, Second-Hand Materials, etc., For Sale or Rent.

Our charge is 10 cts. per line (7 words to the line), set solid, without display. No advt. accepted for less than thirty cents.

Display advertisements, in these columns, 15 cts. per line; count 12 lines agate to the inch, 6 words to the line.

[If replies to Help Wanted, Situation Wanted, or other advertisements are to be addressed care of this office, advertisers add 10 cts. to cover expense of forwarding.]

Copy must reach New York office 12 o'clock Wednesday to secure insertion in issue of following Saturday.

Advertisers in the Western States desiring to advertise under initials may save time by having their answers directed care our Chicago office, Room 614, No. 60 Wabash avenue.

SITUATIONS WANTED

SITUATION WANTED—By young lady in florist store; thoroughly experienced. Warren, 2159-8th ave., New York City.

SITUATION WANTED—By young general greenhouse and landscape gardener on private or commercial place. Reference. Address, Y. B., care The Florists' Exchange.

SITUATION WANTED—By young German, who can make up; a steady position expected. Address, O. Hauschild, Care of H. Beyer, 501 West 123rd st., New York City.

SITUATION WANTED—A designer and decorator wants change of position. Able to manage store. First-class references. Address X. O., care of The Florists' Exchange.

SITUATION WANTED—At once by a young man as assistant, 7 years' experience, sober, willing. Place near New York preferred. Address, Florist, 150 West Broadway, New York City.

SITUATION WANTED—By all-around hand in greenhouses; steady position expected; sober; good references. L. Geh. Hesse's Printery, 249 Hamburg ave., Brooklyn, N. Y.

SITUATION WANTED—Competent rose-grower wants to take care of section. State if private or commercial place and wages. Eastern city preferred. Address X. C., care of The Florists' Exchange.

SITUATION WANTED—As head gardener on gentleman's place; 15 years' experience in all kinds of greenhouse and outdoor work. Best of references. Address, Y. F., care of The Florists' Exchange.

SITUATION WANTED—By grower of prize Roses, Carnations, 'Mums, etc., on commercial place; store preferred; can make up and sell; single, good references. Address, Box 204, Lake George, N. Y.

SITUATION WANTED—By first-class gardener and florist with 20 years' experience in greenhouse and landscape work. Address, Y. A., care of The Florists' Exchange.

SITUATION WANTED—By man with experience in the seed business; both in the growing and retail branches of the business. Address, Y. M., care of The Florists' Exchange.

SITUATION WANTED—By florist, thoroughly experienced, wholesale or retail; strictly sober; can furnish best of references. Address, Y. O., care of The Florists' Exchange.

SITUATION WANTED—By expert landscaper; can carry out all architects' plans; good manager of men; first-class references as to ability; would go anywhere. Address, Landscape, care of The Florists' Exchange.

SITUATION WANTED—As foreman or manager on commercial place; growing for store trade or wholesale; best of references as to character and ability. Wages \$1200.00 per year and house. Address, X. F., care of The Florists' Exchange.

SITUATION WANTED—By practical man as head gardener, experienced in flower and kitchen garden, trees, shrubs, lawns, greenhouses, etc.; aged 35, married, one child. References. Address, Y. G., care of The Florists' Exchange.

SITUATION WANTED—By seedman, young man, single, twelve years' experience; good knowledge of flower, garden seeds and bulbs; willing to travel or work inside. Address, Seedman care of The Florists' Exchange.

SITUATION WANTED—By first-class, young married Hollander, no children; four years' American references and ten years' experience in stores and gardens in Europe and East Indies; private situation preferred; experienced in landscape gardening and managing a private estate, also capable to manage an ornamental nursery. Eastern states preferred. Age 30. Address, X. H., care of The Florists' Exchange.

SITUATIONS WANTED

SITUATION WANTED—By gardener and florist, single, Swede, aged 35, good grower of Roses, Carnations, Chrysanthemums, Easter and bedding stock. Private place preferred. Address, E. Carlson, Irvington-on-Hudson, N. Y.

SITUATION WANTED—By a young man, 26 years of age, full experience in cut flowers, Roses, pot plants and gardening work for inside or outside work; willing worker; best references. Address, Herman, 327 E. 9th st., New York City.

SITUATION WANTED—By a German, 40, married, as manager or foreman; good grower of cut flowers and potted plants; Easter and Christmas stock; designer. Best of references. New York or Boston neighborhood preferred. Address, Y. L., care of The Florists' Exchange.

SITUATION WANTED—Gardener, single, 34 years of age, 20 years' experience in greenhouses and outdoor work, wishes position on private place; able to take charge; good references. Please state full particulars. Address, S. C., care of The Florists' Exchange.

SITUATION WANTED—As manager for gentleman's place, public institution, park, cemetery, etc.; practical experience in all branches. References first-class. Address with particulars to C. L., care Joseph Linfoot, 1015 East McMillan Street, Cincinnati, O.

SITUATION WANTED—By experienced grower of Roses, Carnations, 'Mums and pot plants on private place. Thoroughly understands outside work. American, married, age 34, one child. Good wages expected. Best of references. New York or New Jersey preferred. Address, Private, care of The Florists' Exchange.

SITUATION WANTED—By landscape gardener and engineer, absolutely reliable and reliable in modern and artistic landscape work of any description, also drawing plans; can take full charge of landscape work. 28 years of age, single and well recommended by architects. Address, Y. F., care of The Florists' Exchange.

SITUATION WANTED—By a German, experienced in Carnations, Chrysanthemums, pot and bedding plants, also vegetables under glass; good designer and decorator; thoroughly familiar with handling help. None other than large private place considered and position must be permanent. A No. 1 references furnished. Address W. F., care The Florists' Exchange.

SITUATION WANTED—As foreman or manager in a commercial establishment by a man of unquestioned ability and who has had years of experience in the growing and selling of all greenhouse products; Roses, Carnations and Chrysanthemums a specialty; also Christmas and Easter plants and flowers; good on floral designs and the arrangement of flowers for all occasions; understands the management of help. A position of responsibility desired. Address, Livingston, care of The Florists' Exchange.

HELP WANTED

Please mention the Exchange when writing.

Florists in good standing throughout the country can avail themselves of the advertisers' offers in this Department and accept, without hesitation, orders from their local customers, transmit same to an advertiser in these columns, and thus avail themselves of the opportunities for extension of trade which are open to all. Let your customers know you fill orders by telegraph to any part of the country.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail firms advertising under this heading are all considered by the publishers of *The Florists' Exchange* as being responsible, and will accept and fill orders for Flowers, Plants and Floral Designs for Steamer Orders, departing Trains, or any given point within their reach, forwarded them by mail, telegraph or telephone, in the respective districts to which their trade extends, the usual commission being allowed. While no guarantee is expressed or implied by this paper as to the satisfactory fulfillment of orders sent to parties whose names appear in this Directory, we will state that only concerns of known good standing will be admitted in this Department. The use of Arnold's Telegraph Code No. 16, a copy of which is placed in the hands of every advertiser, will greatly facilitate this interchange of business.

That Yale Restriction on Flowers

In speaking of the decision of the Yale junior class to dispense with flowers at their promenade exercises, the New York World said, in part:

"Assuming that the flowers would have been supplied in part by New York as well as by New Haven florists, the law regulating interstate commerce appears to have been violated. Such action by a Princeton or Cornell class would be bad enough, but occurring as it does at Yale, Harvard's successor as the Administration college, it is a flagrant defiance of Mr. Taft's policies. Shall the will of the Chief Executive in the matter of trust regulation be thwarted and his purpose defeated in the very house of his friends?"

These remarks may be taken as serious or as facetious, according to the whim of the reader. But so far as the florists are concerned there is nothing funny about it whatsoever.

Looked upon as a measure adopted with an intent to not hurt the feelings of the poorer students, why not carry the farcical procedure to its fullest limits, and prescribe that no student shall be entitled to tickets until he signs an agreement not only to "omit" flowers but also to "wear clothing, hat and shoes of the humblest description, dispense with gloves, taboo the dress suit, and limit his spending money to one dollar." Then, and only then, will a full measure of equality have been established between the extremes of poverty and riches.

Just why flowers should be singled out as the item on which economy should be practiced must ever remain a puzzle to the man on the outside.

An English Florist's Lecture

Mr. R. H. Felton, of the firm of Felton & Sons, Court florists, Hanover Square, London, recently entertained the Croydon Horticultural Mutual Improvement Society with a lecture and demonstration on floral decorations. Mr. Felton's reputation as a floral artist is universal, and with a keen sense of humor throughout his lecture he kept his audience fully interested during his discourse. The Journal of Horticulture says of his lecture:

"To illustrate the practical part of his work he exhibited a photograph of an overmantel decorated with the common Dog Rose, and truly a beautiful picture it was, so that it exemplified clearly the artistic embellishment which can be acquired with flowers within reach of

Flat Casket Piece

SAN FRANCISCO, CAL.

"Choicest of Flowers Always on Hand."

anyone. Other designs were shown where choicer flowers were used, but even in these the same talent was apparent, for the arrangements of the flowers were such that one concluded at once they were occupying the natural position as when growing. Stereotype design is unknown to him, and his advice was originality as much as possible. Present-day taste accepts anything original, and in this way the true artist's talent can be shown.

"In his demonstration he made a bouquet of Lilies of the Valley, and before a very critical audience he fashioned it worthy of a place in any Court debutante's hand, and what is rarer even was the fact that it was made so that it could be carried without being a source of trouble to the carrier. His experience covers the whole range of floral decorations, illustrations of which he passed round to his audience, and they included receptions, dinner table adornments, the Royal box at the Olympia, Court gatherings, and the floral emblems for those whose memory one cherishes when their labors are over and they take their long rest.

"Mr. Felton never tires in his work; at least he appears not to do so, for although in the midst of a busy decorative season as it is just before Christmas, he was very reluctant to bring his lecture to a close, and the chairman had to remind him of his late train to take him back to London."

F. E.—The Best Advertising Medium

Philadelphia

Louis Niemann, 2729 No. 5th st., reports the year 1909 as best ever in his long experience. This store has recently been renovated, window enlarged and part of counter removed, all of which greatly adds to its appearance. Mr. Niemann recently obtained a new delivery wagon, built especially for carrying flowers, and the team is one of the showiest outfits owned by any uptown florist. Funeral work has been excellent since the holidays.

Samuel V. Smith, located east of 11th and Westmoreland sts., at 3323 Goodman st., has some 12,000 sq. ft. of glass devoted to supply needs of his retail trade as well as considerable wholesale business. Mr. Smith has a delivery wagon of which the top is made to represent a greenhouse. A good business has resulted from what was started some years ago as a hobby. Mr. Smith has one greenhouse in which he has built pools of concrete in which he breeds large quantities of fancy goldfish of both rare and common varieties, one is a four color Telescope, showing red, white, blue and black. This place is the only large fish breeding plant in this part of the country, and there are also grown large quantities of aquatic plants.

HACKENSACK, N. J.—The store, known as "Red Towers Florist Shop," was well patronized during the past month, and business has been exceptionally good since last Fall. During the holiday season just passed a good demand was experienced for pot plants of all kinds, especially Poinsettias, more of which could have been disposed of were they obtainable. Boston and other Ferns move well, and the trade in cut flowers has been quite brisk. The store has a fine location, and is within easy access from all parts of Hackensack, being located opposite the railroad depot, on or near the main trolley connections.

CLUBS AND SOCIETIES

American Society of Landscape Architects

At the annual meeting of the American Society of Landscape Architects, held January 12, in the rooms of the Transportation Club, these officers were elected for the coming year: Charles N. Lowrie, New York, president; Warren H. Manning, Boston, vice-president; H. A. Caparn, New York, treasurer, and Charles D. Lay, New York, secretary.

Springfield (O.) Florists' Club

The Club met on the evening of January 10, at the Highland Floral Co.'s greenhouses on South Limestone st., with 35 members present. It was a social session and no business was transacted. A fine spread was prepared for the occasion, which was served in the greenhouses, the tables set among the flowers and presenting a beautiful sight. Everything that is good to eat was there in abundance and a royal good time was enjoyed by all.

During the supper matters of interest were discussed and each one of the members had something to say. A business session will be held in the near future.

Elberon (N. J.) Hort. Society

This Society held a meeting on January 17, President Peter Murray in the chair. This being Carnival night there was a large attendance of members and including several out-of-town members. There was a fine display of Carnations in the room and quite a discussion took place on their culture after the judging was finished. The awards were as follows: Anthony Eager, first for White Perfection; Peter Murray second; Peter Murray first for pink Enchantress; Peter Ewen second; A. Bauer first for Rose Pink Enchantress; P. Murray first for Winsor, James Kennedy second; J. Kennedy first for Beacon, A. Bauer second; A. Bauer first for Harlowarden; P. Murray first for V. L. Lawson. The Cottage Gardens Co. of Queens, L. I., was awarded a certificate of merit for 25 blooms of

Mrs. C. W. Ward; the variety was shown in fine form and made quite a hit with the members, as it showed up fine under the artificial light. Alma Ward was also exhibited by the same concern, but unfortunately got damaged in transit, so it could not be judged properly. Charles C. Dewild was awarded a preliminary certificate of merit for a very fine pink seedling. Peter Ewen gained, for a bed seedling, 70 points. James Dowlen was awarded a certificate of culture for a fine pot of red Lawson. ALEX. FLEMING, Rec. Sec.

Baltimore G. and F. Club

The Gardeners and Florists' Club met in their hall at the Florists' Exchange building, Franklin and St. Paul sts., last Friday, Jan. 21, with President J. J. Perry in the chair. The meeting was one of the most largely attended held for quite a long time. Interesting subjects were discussed at a lively rate from 8 o'clock until 11 p. m.

President J. J. Perry introduced to the members Mrs. William M. Ellicott of the Equal Suffrage League, who addressed the club on woman suffrage for nearly an hour; she spoke with every encouragement, asking for support. Her speech touched on many points that the members had never looked into and they were wondering what would be heard next. Those who were unable to attend the meeting certainly missed an interesting talk. Mr. Robert J. Graham made a short address in which he congratulated Mrs. Ellicott upon the manner in which she had presented the question. The club then extended their hearty thanks.

Mr. Richard Vincent, Jr. of White Marsh, Md., was the next speaker; as president of the Maryland State Hort. Society he spoke in behalf of that Association, saying he wanted to make the best history for that Society this year. He has the assurance on every hand and source. It is expected the coming show, next Fall, will be the most successful ever held by the Society in Baltimore, exhibits from far and near will be many and many catchy decorations will be schemed out.

An invitation was extended to the Club to attend the Society's Summer meeting and outing to be held at the J. G. Harms Nursery, Berlin, Md., followed by a trip to Ocean City. It is expected many will take advantage of this generous offer.

Considerable interest was taken in the Dorothy Gordon Carnation; some of the growers are starting to grow it.

A committee of five was appointed to work up the Fall and Summer doings of the Maryland State Hort. Society, consisting of Philip Welsh, Isaac H. Moss, C. Seybold, Boone and G. Morrison.

Jas. Hamilton attacked the newspapers for the lack of interest taken by them in the last horticultural show.

The members were asked to invite their brother gardeners and florists to the next meeting, February 14, when a Carnation show will be held.

Dobbs Ferry Horticultural Society

The Dobbs Ferry Hort. Society held a dinner at Prucey's Restaurant on Wednesday, Jan. 19, which was largely attended. An excellent menu was prepared by the restaurant management and the service was all that could be desired. The tables were handsomely decorated with Carnations, Roses, Eupatoriums and some excellent spikes of Mignonette.

President Thomas Lee presided, and after coffee had been passed, introduced Mr. Jos. Dunbar as toastmaster for the evening. His first call was on Mr. J. Smith of Tarrytown Horticultural Society who gave a very able address on the good work being done by horticultural societies in general. Mr. W. Scott was the next speaker, who spoke on the good fellowship existing between Tarrytown and Dobbs Ferry Societies. Mr. J. Scott delivered the real horticultural speech of the evening. Mr. J. Ottis entertained with some of his recitations, such as Kelly's Dream, and others. Mr. F. Walter of Yonkers and Mr. C. Kurkevich entertained by several selections on the violin. Mr. H. Kastner, secretary of the Society, gave an insight to the good work of the Society since its existence in the past nine years. Mr. B. Husted, Mr. T. Lee, Mr. P. Clinton and others made some very entertaining remarks. H. HARMS.

Rochester, N. Y.

Generally speaking, trade has been good and the demand for cut flowers brisk with the exception of dark colored Carnations, which have been a glut on the market and almost impossible to move without some sacrifice in the matter of price. However, with McKinley Day coming, there is no reason to fear the continuance of these conditions for the next week or so; besides this, weather conditions have shortened the cut somewhat and by the end of the week the demand will no doubt more than equal the supply.

Roses are in good demand and prices have been first rate, the stock being eagerly sought for. Valley has fallen off in demand to some extent. Violets do not move very well, but with warmer weather will no doubt be in demand again. Bulbous stock is in great call; in fact, orders have to be placed ahead to insure being filled. The severe losses of previous years to the growers are no doubt the cause for this, they not having attempted to grow much of this stock.

Prices for the week as follows: Carnations, white and Enchantress, \$2, \$2.50, \$3; colored, \$1.50, \$2, \$2.50. Roses, \$6 to \$12; American Beauty, \$5, \$15, \$25, \$30, \$40. Valley, special, \$1 per 100. Violets, 75c per 100. Narcissus, Trumpet Major, \$4 to \$5. Tulips, \$1. Cattleyas, \$50 to \$60 per 100. Smilax, \$15 per 100. Asparagus 25c. to 50c. per bunch. Sweet Peas, 75c. to \$1 per 100.

George T. Boucher is about to move into more commodious quarters, next door to his present location. He will have two fronts, one on Main st., the other on East ave., and when alterations are complete will no doubt have one of the handsomest establishments in the city.

F. W. Vick has left for Pittsburgh to attend the meeting of the American Carnation Society.

At the last general meeting of the Rochester Florists' Association the following committees were appointed to have charge of the arrangements for the convention of the S. A. F. and O. H.:

General Committee: F. W. Vick, chairman; H. B. Stringer, secretary; George T. Boucher, C. W. Crosmann, John Dunbar, W. T. Fonda, George B. Hart, W. L. Keller, George J. Keller, E. S. Osborne, William Pirie, Walter Salmon, A. H. Salter, Charles Suhr, L. T. Tickner, A. F. Vick, A. L. Wood, John Livingston, John McKeonen, Edward H. Vick, F. Szrezeski, E. Berry, J. O. Pridmore, Thomas Cogger, C. F. Brown, W. H. Dildine, E. R. Fry, W. R. Graves, J. M. Keller, F. J. Keller, F. B. King, C. H. Ogsten, E. F. Rowe, R. G. Salter, F. R. Schlegel, Paul Thomann, C. H. Vick, E. P. Wilson, John H. Hohener, W. T. Logan, Charles Schomberg, R. D. Leutchford, John Condie, John House, Robert Ballantyne, Otto Gresinze.

Sub-Committees—Entertainment: F. W. Vick (chairman), and all the members of the Rochester Florists' Association. Ladies: C. H. Ogsten (chairman), George T. Boucher, E. R. Fry, John House, J. O. Pridmore, W. T. Logan. Finance: W. T. Fonda (chairman), F. B. King, C. W. Crosmann. Souvenir Album: C. H. Vick (chairman), E. F. Rowe, W. L. Keller, N. R. Graves, John Dunbar. President's Reception: George B. Hart (chairman), E. S. Osborne, A. H. Salter, Charles F. Brown, John Condie, Robert Ballantyne, R. D. Leutchford, John Livingston. Bowling: A. F. Vick (chairman), Walter Salmon, George J. Keller, John Hohener, J. M. Keller. Decorations: F. J. Keller (chairman), E. P. Wilson, Charles Suhr, William Pirie, C. H. Vick, F. Szrezeski, E. Berry, Thomas Cogger. Music: E. P. Wilson (chairman), R. G. Salter, W. H. Dildine. Shooting: R. G. Salter (chairman), F. R. Schlegel, Paul Thomann, C. H. Vick, John McKeonen. Ball Game: J. M. Keller (chairman), W. H. Dildine, L. T. Tickner, Charles Schomberg, Otto Gresinze. Transportation: E. S. Osborne (chairman), George J. Keller, R. D. Leutchford. Printing, Programs and Press: E. F. Rowe (chairman), George B. Hart, A. L. Wood. Nomination for Superintendent of Trade Exhibit: Charles H. Vick. H. B. S.

Hum—Alive and Up-to-date

Japanese Maples

Splendid stock to force into growth for Easter sales.

These handsome **Japanese Maples**, with their rich colored foliage, make excellent pot plants and meet with ready sales at Easter.

We have an exceptionally fine lot of 6-inch, pot grown plants in the following varieties:

Polymorphum Atropurpureum. Splendid purplish-red foliage, deeply cut; 18 to 24 inches high.

Polymorphum Atropurpureum Dissectum. Reddish purple, very deeply cut and divided foliage; 18 to 24 inches high.

Japonicum Aureum. Heavy bright golden yellow foliage; 15 to 18 inches high.

\$1.00 each; \$10.00 per dozen; \$75.00 per 100.

HENRY A. DREER

714 Chestnut St. PHILADELPHIA, PA.

The above prices are intended for the trade only.

Please mention the Exchange when writing.

All goods must travel at purchaser's risk; charges for packing at actual cost of material.

Plant Names, Pronunciation of

This handy little book furnishes a key of the pronunciation of some 4,350 names of cultivated plants, genera and species, and will be found valuable as furnishing a standard to which to refer by all who desire to be correct when they speak of plants. Sent postpaid, on receipt of Fifty cents. Address, The Florists' Exchange, P. O. Box 1697, New York.

Prices Advertised in these Columns are for THE TRADE ONLY

Hartford, Conn.

There has been a decided improvement in business this week over that of last, consequently stock is pretty well cleaned up and some varieties of flowers are scarce. The supply of Roses and Carnations is considerably less than the demand. A large amount of funeral work has been done; there has also been an increased call for flowers for social affairs.

Prices are about the same as last week, excepting Violets, which took a drop to \$1 per 100, retail; they are more plentiful than any other flower at present. Azalea plants, at from \$1.50 to \$3 each, are selling well.

Announcement was made in one of the daily papers this morning that there would be no flowers worn at the Trinity prom., which comes off Feb. 7. If the committee carry out this plan it will make a difference in the demand for flowers for this affair as the dealers always make preparations for a good sale for that day. J. F. COOMBS.

Detroit

Local market conditions are sound and healthy, but nothing very startling; still, some elaborate decorations will be executed within the next week or ten days and flowers will have to become much more plentiful to cope with this coming demand. At present they are hardly enough to satisfy a lively call for funeral work. Roses are extremely scarce and Spring flowers are still very few; a more liberal supply of the latter will bring about a great increase in counter sales.

The large assortment of greens now being kept in stock at the Michigan Cut Flower Exchange is changing the appearance of many a floral piece. Green and brown Mahonia is finding great favor, causing a falling off in the sales of brown Galax. It is, perhaps, not as profitable as Galax, but it puts a much more artistic finish to any floral piece where Mahonia is used.

The gradual improvement of Mrs. Sullivan, who has been ill with an attack of dropsy since Thanksgiving, is welcomed by everyone in the trade and her many customers. FRANK DANZER.

New Bedford, Mass.

Trade has been fairly good the past week. Carnations retail at 60c. to 75c. per doz.; Roses, \$1.50 per doz.; Violets at \$1 per 100; Sweet Peas at \$1 per 100; Paperwhite Narcissus at 50c. per doz. Some nice Freesias are to be seen; these help out with funeral work which is very good, using up lots of short stock. Asparagus green is rather scarce just now; Smilax helps out.

Wm. P. Peirce finds a ready sale for those fine Violets from Harvey Briggs, near Dighton, Mass. Wm. Livesey is sending some nice Enchantress and Winsor to E. H. Chamberlain on Purchase st. Wm. H. Davenport is very well satisfied with his Fern sales the past season; he has been running up against one of our local department stores with Ferns and William won out, as he ought to do.

S. S. Peckham is now back at his old place again and things once more are humming.

Peter Murray of Fairhaven, Mass., is planning to erect another range the coming season, it will be 160x60; he will also install a new Kroeschell boiler and build a new boiler house. His place is in fine shape; he has some excellent flowering plants. This is the home of the famous Winsor Carnation and he has planted largely of this variety.

Manuel Sylvia of the New Bedford Nurseries on Dartmouth st., is building a new greenhouse, 45x12, and a new office; he will raise bedding plants, also a few Carnations. His location is a good one, right opposite the Rural cemetery.

H. A. John is showing some nice promising Carnation seedlings.

The New Bedford Hort. Society has taken on a new lease of life, and will meet, next month, in the Board of Trade rooms. Frank C. Barrows, assistant postmaster, is president; John P. Rooney, Jr., to Mrs. Frederick Grinnell, is vice-president.

Easter will soon be here; things look good for that day. HORTICO.

Readers will confer a favor upon us more than passing value if, when ordering stock of our advertisers, they will mention seeing the advt. in the Exchange.

A REVIEW OF THE MARKET

Violets
Cyprian
Richie
Lilies

NEW YORK.—The cut flower market is in a fairly good condition and buyers are a little more active on small sales, but the increased receipts from growers are not conducive to a general clean up. Medium and short Roses have shown some call, and demand has about used up present supply. Other flowers are in abundance and on Wednesday noon considerable material was still in hand. American Beauty Roses are coming in about equal to the demand, and a few top grades realize 75c. in small lots, the average prices being nearer the 50c. mark. Tea Roses of all varieties are quite plentiful and the better grades are hard to move. In small quantities 12c. is obtained, but the bulk of sales is made at 10c. for this class of material. No. 1 and No. 2 grades have been easy selling and while no advance in price is noted the fact that clearances are made is very satisfactory. All colors meet about the same demand.

Carnations are improving rapidly and some especially fine grade stock is on the market. Good standard flowers realize \$4 while poorer grades fall to \$1.50 and \$2, with plenty of all grades on hand.

Orchids and Gardenias remain about as last week; a few small sales of Cattleyas realize 60c. per flower, but these prices have no effect on the general bearing of the market, as the average will be between 40c. and 50c. Cypridiums are not called for, even at special offerings. No set price is on Gardenias, it is a case of get what you can.

Lilies are plentiful and sales are made at all prices from 8c. up according to quality.

Lily of the Valley is a glut and plenty of it is received without foliage; a chance to clean out at \$1 to \$2 for all grades will be welcomed by the wholesaler. Callas move well, and good stock realizes 15c. each.

Daffodils are fairly abundant and sales of extra stock of these realize \$5 per 100; other grades sell at anywhere from \$2 to \$4. Narcissus and Tulips are in heavy supply and plenty of this material is held over from day to day.

Violets are quite plentiful and sales of these vary in price from 25c. to 60c. per 100, with the average quotation near the lower figures.

Greenery of all kinds is in fair demand, and realizes good figures. Sweet Peas are plentiful and only top grade stock is in any demand.

BOSTON.—Prices not changed much since last week. Roses dropped somewhat. Carnations run from 2c. to 5c. Sweet Peas, 75c. to \$1.25. Violets, 50c. to 75c. and more plentiful. Paperwhite Narcissus, 2c. Trumpet Daffodils, 4c. to 5c. Lily of the Valley, 2c. to 4c. Mignonette, 3c. to 4c. Callas, \$1.50 to \$2 per dozen. Freesias, 2c. to 6c. Asparagus scarce and in demand. Stevia is scarce; it is getting too late for it.

PHILADELPHIA.—The cut flower market is in a very good condition and has been for the past few days. Flowers of all kinds have been in good demand, so that a decided shortage has existed in many lines, especially so in the medium grades of Roses.

American Beauty Roses are quite scarce, and more could be used; top grades reach 75c. while medium grades bring good figures. Tea Roses of all kinds, especially white, are practically cleaned out every day, and prices on them range from \$4 to \$12. Mrs. Jardine is a popular variety and is today the highest priced Tea Rose in this market.

Carnations are selling well, the lower grades cleaning up quickly as they arrive leaving the market in a good condition. Prices realized average \$3. Some fancy varieties reach \$5 and \$6, but stock must be good. Enchantress and White Perfection clean up at \$4.

Cattleyas have been in good demand the past few days, but the supply is somewhat spasmodic, causing prices to fluctuate from 50c. to 75c. daily. Cypridiums are plentiful and hard to move at 12½c. each. Lilies are in heavy supply, and prices vary from 8c. to 15c. with but little call. Lily of the Valley is very plentiful and top grades reach \$4. No great demand is experienced for it, and fakirs use considerable material for street offerings.

Callas move well, and good flowers bring 12c. to 15c. Violets are a trifle off color, and receipts are hard to clean up, except at reduced prices; attempts to hold to the dollar mark for top grades are not very successful.

Lilac is selling rapidly and at \$1 per bunch cleans up well. Sweet Peas are more plentiful and prices have tumbled a trifle so that 35c. to 75c. would be a fair range for those sold. Mignonette is in moderate demand, while Gardenias are gradually getting more and more plentiful. Asparagus plumosus has moved well, and realizes good figures. A. Sprengeri is not so much in demand. The better grades of Adiantum clean out at \$1.50 per 100, and sales of hardy Ferns and Galax leaves have increased in the past few days. Tulips and single Daffodils are quite popular. Narcissus is still over abundant, and sales to clean out are made at \$1 to \$2.

CHICAGO.—Conditions in the market are practically the same as last week; it would take the most optimistic to see any change whatever. The Rose proposition is as close as ever; consequently all Roses, with the exception of Am. Beauty, have advanced in price. Killarney is at the season when it is dormant, so, with this and the dark weather combined, the crop is decidedly short. What Roses are obtainable are in excellent condition. Killarney fancy are bringing up to \$18 per 100 and down to \$5 for the cheapest grades; Bridesmaid and Bride are commanding all the way from \$5 to \$15 per 100; same prices cover all other varieties of Roses. Am. Beauty is as scarce, although the price remains the same as last week, and are selling at \$4 to \$5 per doz. and down to \$2.

Carnations are a little easier this week, coming in in greater quantities, and sell from \$2 up to \$4 per 100 for special fancy. More whites could be disposed of if available. Tulips are excellent and were never received in any better condition. Yellow are given the preference, as to color, and sell at \$5 per 100 for single, with \$6 per 100 for double. White Lorraine are exceptionally fine at \$4 per 100. Tulips of all colors are moving off nicely. Roman Hyacinths and Freesias are also meeting with good demand at from \$3 to \$4 per 100. Paperwhites are in quantity sufficient to meet the demand, and the price is \$3 per 100.

Lilies and Callas are not so plentiful; the stock is in unsurpassed condition; the price for all kinds is holding stiff at from \$15 to \$18 per 100.

Sweet Peas are still scarce; the weather will not permit them to develop as they should; all are used that can be procured; prices range from \$1 to \$1.50 per 100.

Violets are one stock which is in plenty; they are good, both in singles and doubles, and sell at 75c. per 100; a few fancy doubles may bring \$1. A few Daisies have made their appearance; not enough to quote prices.

Green stuff is in good demand; there is not an overabundant supply and all kinds are moving off very nicely. Smilax is perhaps a little more plentiful than for some time past.

There is very little occasion for any large amount of floral work at the present time, except funeral; of this there seems to be enough to give all the retailers a chance of keeping up.

We must have sunshine, and more sunshine, before we can expect any noticeable improvement in the condition of the market.

ST. LOUIS.—The business done in the florist line was very encouraging the past week, as the demand for stock of all kinds was very strong at all the commission houses. The retailers say that they had a busy week with all kinds of work in the social line and a great amount of funeral work.

The commission houses have been having a great run of cut stock all last week and the demand was so good that they cleaned up pretty well each day. Roses are the only scarcity and all Rose growers are off crop at the same time. Prices on stock for this week are: best Roses from \$3 to \$12.50 per 100; firsts, \$4 to \$6; shorts, \$2 to \$3 per 100. American Beauty Roses, long fancy, are up to \$5 per doz.; there are plenty of shorts at from 50c. to 95c. per doz. Carnations, extra choice, \$3; good grade at \$2; splits, \$1.50 per 100.

California Violets are in abundance and sell for 40c. per 100; extra long choice, 60c.; doubles at 50c. to 75c. Callas at \$12.50 and L. Harrisii the same.

Lily of the Valley, \$3 and \$4 per 100; Paperwhite Narcissus and Roman Hyacinths at 2c. to 3c. Tulips and Freesias are not in as yet. The green market is healthy and there is plenty of everything in season; Galax and fancy Ferns sell well; Smilax, too, had a big call all week.

ST. PATRICK.

INDIANAPOLIS.—Notwithstanding dark stormy weather prevented many sales during the past week, business was reported as satisfactory from the several flower quarters. Stock was not at all plentiful and it was impossible to fill orders with the same high grade of flowers heretofore furnished. Funeral work carried off the honors and consumed much otherwise unusable material. Counter trade suffered materially and there were but few decorations. Small blocs for corsage bouquets met with a steady demand and prices in this line have decreased but little since the holidays.

Roses have fallen from the high standard so long maintained this season and little short-stemmed stock received is often a source of disappointment. Prices vary but little from the time when they were better, as there is often not enough to go around under those circumstances. Bride and Bridesmaid have at last gained the lead over Maryland and the Killarneys, but the length of time they will be able to hold the pennant is, at this writing not discernible. Prices for the various kinds are much the same, namely, \$6 to \$8 per 100 for fancy grades; \$4 to \$5 for seconds and \$2 to \$3 for the

short ones. Am. Beauty are selling in fine shape at \$5 to \$50 per 100. A few Mrs. Jardine shown in this section are making an excellent impression.

Carnations have, like the rest, suffered somewhat but are more plentiful than Roses at \$3 to \$4 per 100. A few days of sunshine were badly needed by the prospective Pittsburgh exhibitors.

Spring bulbous flowers, such as Jonquils and Paperwhite Narcissus, have been much in favor at \$3.50 to \$4 per 100. A few Dutch Hyacinths, at \$8 per 100, also Tulips at one-half that rate, are obtainable.

Callas and Harrisii Lilies, in the face of continued funeral work, are moving quickly at \$10 to \$12.50 per 100.

Home grown and Eastern Violets are handled everywhere at 50c. to \$1 per 100.

Sweet Peas are arriving from many sources and the quality is good. Selling them by count of flowers, instead of stem, is an innovation with a local grower; he justifies his stand by explaining this as the only exact way of dispensing them; 50c. to 75c. per 100 is the usual figure.

Potted plants have begun the ascent to the zenith of their career and are certainly producing nice effects in the several shop windows.

Smilax at \$10 to \$12.50 per 100 strings and other green goods are plentiful.

I. B.

New York

Phil. Kessler is receiving a fine grade of Freesia Purity from Wm. Matthews, Great Neck, L. I.

The annual reception and dance of the Florists' Social Club will be held in the Leslie rooms, 260 West 83d st., N. Y., Saturday evening, Jan. 29, commencing 8.30.

Members of the Astoria Bowling Club, with their wives and lady friends, spent a very pleasant evening on Jan. 26. Prizes for lady and gentleman bowlers were freely contested for, and the number of prizes offered made the event more interesting.

Walter F. Sheridan is receiving some well-grown stock of all varieties of Tea Roses.

It is understood that Fred W. Smythe was to sail for Europe some time this week.

CUT FLOWERS AT WHOLESALE

Flower Exchange will be held Saturday, Feb. 5.

J. McManus is handling some fine stock of Wallflowers, Gardenias, Valley, Cypripedium, Lecanum and Daisies, as well as all Orchid blooms in season.

Henshaw & Penrich are offering Callanthes, Sweet Peas, Violets and Daffodils of extra quality.

John T. Withers, a well-known landscape architect, started, Jan. 19, for a trip around the world. He will go by way of New Orleans and San Francisco, thence across the Pacific to the Orient, and expects to return about July next.

Mrs. Annie Friedman, a well-known flower seller, residing at 150 Clinton st., N. Y., has recently been informed by a daughter in Hungary of the death of an aunt whose will bequeaths to Mrs. Friedman and others a share in the estate which is valued at \$200,000. Mrs. Friedman is highly elated over the news and looks forward to a return of the brighter days which she enjoyed when she occupied the stand next the moving picture show around the corner on Grand st. A brother in Cleveland, O., is, if living, also an heir.

Manager Coan of the Growers Cut Flower Co., W. 28th st., says that the Easter Lilies he is receiving from the greenhouses of the late John Scott, are the best in the market. These are grown by D. Mackenzie, and fully demonstrate that gentleman's ability as a grower.

C. W. Scott of Vaughan's New York store spent Tuesday in Chicago. Mr. Scott was called West through the illness of his father, who resides in Grand Rapids, Wis. He spent several days there returning to New York, last Tuesday.

The next regular meeting of the New York Florists' Club will be held at the Grand Opera House Building, corner Eighth ave. and 23d st., Monday evening, Feb. 14, and the special feature will be Carnations. Ladies are invited and also those in the trade not members of the Club but interested in the Carnation.

Valuable prizes have been donated by Messrs. Reed & Keller, Stump & Walter Co., and Vaughan's Seed Store.

The Second Annual Banquet of the New York and New Jersey Association of Plant Growers will be held Wednesday, Feb. 2, at the Hotel Astor, Broadway and 44th st. The members and their friends will assemble at 6.30 p.m. and at 7 p.m. the dinner will be served in a private dining room. The Dinner Committee has spent considerable time in selecting a suitable place to hold the banquet and has perfected such arrangements as will assure a greater success than any of the Association's previous entertainments. The price of the tickets is \$5, admitting either gentleman or lady. These may be had of the secretary, W. H. Siebrecht, Jr., 277 Broadway.

Quite a large party left New York on Tuesday evening for the Pittsburgh convention of the American Carnation Society. A special Pullman car engaged by the New York Florists' Club was completely filled. Those having berths in the car were John Reimels, Woodhams; J. D. Cockcroft, Northport; F. R. Pierson and nephew, and J. R. Fotheringham, Tarrytown; J. Birnie, West Hoboken; R. T. Brown and M. Matheron, Queens; Peter Benlein and Chas. Beckmann, Elmhurst; J. Warburton, Fall River, Mass.; E. Hammond, Fishkill; Mr. Bates, Tonawanda; W. Eccles, Oyster Bay; R. G. Wilson, E. Dailledouze and Mrs. Dailledouze, J. D. Weir and Mrs. Weir, Brooklyn; E. L. Enggren and Mrs. Enggren, Aqueduct; E. J. Taylor and Mrs. Taylor, Greens Farms, Conn.; J. H. Pepper, F. H. Traendly, H. H. Hulse and H. A. Bunyard, New York.

All past employees of the old firm of Messrs. Pitcher & Manda are requested to send their names and present addresses to Herman E. Merkel, Chief Forester and Supt. of Construction at the Bronx Zoological Garden, New York City. This request is made for the reason that a temporary organization has already been effected with the following officers serving pro tem: Arthur T. Bodington, chairman; Herman E. Merkel, secretary; Harry A. Bunyard, treasurer. The object of this organization will be to have annual reunions and to keep in touch with one another in a social way. Just as soon as a permanent organization can be effected a banquet will be held to celebrate this reunion, and it is thought that over 200 of the old Pitcher & Manda boys, who are at present permanently connected with the trade, can be brought together. Both Messrs. James K. Pitcher and W. A. Manda have acquiesced in the plan.

CATTLEYAS

Magnificent blooms, as choice as we ever offered.

Philadelphia

The will of the late Wm. K. Harris was admitted to probate Jan. 21, the estate being valued at "\$100,000 and over."

The annual Midwinter Ball was held in Horticultural Hall, Jan. 21. The decorations were ably executed by J. J. Habermehls' Sons. Besides wild Smilax and other greenery, Easter Lilies, yellow Tulips, Roses, etc., were prominent in the material used, the whole presenting a very creditable arrangement.

The opening of the West Philadelphia branch of the Century Flower Shop took place on Saturday, Jan. 22. The new store is very tasty in appearance and presents a fine contrast to the stores close by, owing to its brilliant light effects. All customers received a handsomely lithographed reproduction of flowers—without the usual advertising card—which will no doubt be framed by many of the recipients. Mr. Holland, who has been connected with the Century Flower Shop on 12th st. for several years, attended to the opening of the branch establishment, and under his able direction the new store should prove a complete success.

Robt. Kift had on view in his store window last week several plants of the new Begonia Glory of Cincinnati, grown by J. A. Peterson of Cincinnati, O.

The new iron frame propagating house being built for the Robt. Craig Co. at Norwood, Pa., by the Lord & Burham Co., is rapidly nearing completion, and if weather permits, it will be complete by Feb. 1. All the plants at this establishment are thriving, due, no doubt, as Wm. Craig says, to the "pure air and good soil" together with other good growing conditions.

F. E.—The Best Advertising Medium.

is well spent in a visit to the establishment. Many new plants have been added, and a general clean-up given the entire place.

The next meeting of the Florists' Club of Philadelphia will take place on Tuesday, Feb. 1, at which time Mr. Fahrwald will read a paper entitled "The American Rose Society and its Aims." It is understood that the evening of Feb. 5 will be "Indies' night" and a large attendance is assured.

D. T. Connor has been fortunate in securing a contract for the Lord & Burnham Co., for the construction of an iron frame greenhouse, 600 by 55 ft., of the shadeless ridge type, to be built as soon as weather permits, for the Jos. Heacock Co., in which it is anticipated that roses will be grown. The house will be built on the property of the company at Rocklofs, Pa.

The S. S. Pennock-Meehan Co. is handling a very fine brass vase, suitable for long stemmed flowers. It is of unique design, and will prove popular at the uptown stores.

Last Tuesday night the following gentlemen went to Pittsburgh, Pa., to attend the A. C. S. convention: Chas. Meehan, Robt. Craig, Wm. P. Craig, Edw. Stroud, D. T. Connor, Wm. Swayne and Jos. Heacock, the party taking the 11.05 p.m. train on the Penna. Railroad, the train to which the special car of the New York Florists' Club was attached.

The Leo. Niessen Co. will soon have enough Acacia to fill all orders, as the grower who supplies the annual crop of this product says the plants are in fine condition and a heavy cut is predicted.

Otto J. Thilow of Henry A. Dreer Inc. has returned from his trip to Chicago and other distant cities, and feels much elated over his visits among several of the craft in the various cities visited by him.

A very catchy window decoration was recently executed at Mitchell's store, 518 Market st., by N. Mattson. It represented an Apple tree in full flower—artificial flowers—with all the necessary spraying appliances and advertising cards extolling the virtues of Kil-o-scale, an insecticide for San José scale, while nearby were perfect Apples showing results of spraying. More such displays will surely result in increased business for the firm.

C. Eisele, at 11th and Westmoreland sts., expects that before long the city improvements which are being carried on around his establishment and hampering his trade, will be completed; his place has been hard to get at, owing to the city blocking up the driveway, etc. It is hoped that about two months more will see this new street with sidewalks and paving, and then Mr. Eisele will rebuild part of the houses removed and open up a store. His retail business has suffered to some extent during the public work going on, but his wholesale trade has been very good and orders are now being taken for Easter delivery.

Boston

The lecture at Horticultural Hall on Saturday, Jan. 22, was of unusual interest and drew a large, appreciative audience. Prof. A. D. Taylor of Ithaca, N. Y., was the lecturer and his subject was "A Study of Continental Landscape Gardening." The lecture was beautifully illustrated by stereopticon pictures. The professor took his audience back almost to the beginning of gardening in Europe and led them, step by step, up through the centuries of gardening, ending with the gardens of Europe, which are to be seen at this time. The pictures of Italian and French gardens were especially good.

These lectures are interesting and instructive and of great value to those who can attend them. Many florists and gardeners are unable to attend as the hour at which they are held is not suitable for them to leave their business. The lectures so far this year lack discussion, which is a great feature of the course. Often the discussion is of more value than the lecture, many practical and valuable points being touched upon which otherwise would be omitted.

The next lecture will be on Saturday, Jan. 29; the subject will be "Apple Growing in New England as a Business."

J. R. Leason, Elginville, Newton Centre (William Harvey, gdr.) exhibited at Horticultural Hall last Saturday a collection of Orchids, which were especially well grown. The exhibitor was awarded a cultural certificate. The most noticeable plant in the collection was Cymbidium Traceyanum, which had five

large spikes, each spike carrying a dozen flowers. This is a distinct and beautiful Orchid and was especially well grown. Angreum eburneum was also well grown and had two large spikes of ivory white flowers. Cypripedium selligum and C. Leeanum were well grown specimens.

At the Park Street Flower Market, on Saturday, Jan. 22, at 2 p.m., Mr. Ebel of the Aphie Mfg. Co., demonstrated the uses of the insecticide "Aphie" before a large and appreciative audience. Greenfly, mealy bug, and various scale insects were treated with the insecticide.

The H. M. Robinson Co. has just received a large shipment of Box which is of excellent quality and the color ex-

ceptionally good. Their Leucothoe sprays, bronze and green Galax and other greens are of the best quality. H. M. Robinson, who has been at home for a few days with rheumatism, is at business again.

C. U. Tully of Madison, N. J., was in town. On Friday evening he gave an instructive and practical lecture before the North Shore Hort. Society on "Chrysanthemums." The meeting was well attended and quite a number of the Boston fraternity journeyed to Manchester to hear the gifted lecturer.

William Sim has a house of Sweet Peas just coming into bloom. Mr. Sim has been building a new dwelling house and will move into it very soon. He has just started his Tomatoes.

This week, at the Park Street Market, J. A. Peterson of Cincinnati exhibited a fine plant of his new Begonia Glory of Cincinnati. Many think this is going to make a fine commercial plant, its upright habit making it better for shipping than the famous Lorraine Begonia. It has a good deal of the same blood as Lorraine, as one of its parents is Begonia Socotran. The raiser of this novelty says it is much easier to propagate than the Lorraine Begonias and has better keeping qualities.

The King Construction Co. is progressing favorably with the range of greenhouses they are erecting for Alexander Montgomery, Jr., at South Hadley, Mass.

We are glad to report that John MacKenzie, North Cambridge, who has just lately undergone a very serious operation to his foot, is at business again, although his foot is not quite as strong as it ought to be. John has just erected one of the finest apartment blocks in North Cambridge. The cost of the land and building was fifty thousand dollars. His florist store in this building is probably one of the most modern in all its new appliances in the vicinity of Boston.

Thomas J. Grey, the seedsman, has been at home from business with a bad cold but is steadily recovering and will be quite well again in a few days.

We have had a genuine January thaw and the severe snowstorm of a week ago has disappeared. Now we can see more easily the damage done by the Christmas snowstorm to vegetation. Trees and shrubbery have suffered in this vicinity more this Winter than they have probably done in the past fifty years. The only snowstorm we can remember that will in any way compare with that of last Christmas is the storm on the night the steamer Portland was lost.

There is every evidence at the present time of a large gathering at the Gardeners and Florists' Club banquet on Thursday, Jan. 27 at Horticultural Hall. Tickets are selling splendidly. The committees are working hard to make this the best banquet the Club has ever held. T. Mellstrom, representative of Sander & Sons, England, was in Boston and booked some good orders from the growers.

Baltimore

The present weather conditions prevailing are much more encouraging to the trade in general than the preceding week; however, we had a light snowfall last Friday night which melted away as it fell in the city but the country was less fortunate, three inches covered the roads; no inconvenience was heard of and the growers made their usual deliveries to the city. Carnations at present are almost a glut; the street fakirs use up the surplus, offering them at 25c. a dozen. Violets are 35c. a bunch of fifty. Roses are scarce and bring a stiff price; the retailer manages to find a way out. Paperwhite Narcissus are in demand, being offered at 50c. a dozen and up. Asparagus seems to meet the requirements. Smilax is seldom over plentiful as considerable is used up.

Pot plants are in demand, especially Ferns.

Funeral work is heavy as the death rate keeps up; many elderly people are dying.

Many balls, banquets, dinners, and entertaining of all kinds are in full blast, calling for various kinds of decorations.

R. Vincent, Jr. & Sons Co. have erected two new houses, 35x250 ft.; 1500 feet of piping was consumed in these houses.

Readers will confer a favor upon us of more than passing value if, when ordering stock of our advertisers, they will mention seeing the advt. in the Exchange.

Chicago

"Don't ask!" is the answer all give when questioned as to the condition of stock this week. This noted scarcity has been increasing, if anything, the sudden falling off in receipts, being due to the weather.

Roses are scarcer than ever at this time of the year. Killarney, one of the mainstays in the Rose line, becomes dormant about the middle of January, remaining so about two weeks; this is the only bad feature possessed by this popular Rose and, owing to so many growers discarding Brides for White Killarney, the shortage of white Roses is more perceptibly felt this season than at any previous.

Am. Beauty are also off crop and as scarce as any variety of Roses; the growers announce, however, that after taking a careful review of the condition of their houses of Am. Beauty that they have already budded they can expect a new crop in about three weeks, Killarney and other Roses coming in about a week earlier if the weather would only consent to give some sunshine instead of continued clouds and storms.

Record has been made of the conveyance by Arthur W. Dickinson, for a nomi-

nal consideration, to the city of Chicago, of a triangular tract of land at northeast corner of Belle Plaine and North Fifth ave. The property is to be used for park purposes only.

Two parcels of land, to be used for small park purposes, have been donated to the special park commission by the Pullman Company, on condition that permission shall be given to erect on one tract a statue of the late George M. Pullman. The plots, which are of an acre each, are on 11th st. The gifts will be accepted by the commission at its next meeting.

The South Park commissioners have bought part of the land for a park (number 18) to be located at Dauphin Park, Ill.

The flowers used at the funeral of John Farson, last Thursday, were most elaborate, the house being practically filled. Noticeable among them was a casket cover of Easter Lilies and emblems of the orders in flowers of the Medinah Temple Shriner and Cicero Chapter, No. 180, R. A. M.

At many of the recent weddings, in place of the bride's shower bouquets, which have become so fashionable the past few years, the old-fashioned bouquets of former years have been used.

T. Matchen is handling the stock at Peter Reinberg's in place of Archie Spencer, who is no longer in the employ of same. A letter from Leonard Kill, who is spending some weeks in California, states that he is having a splendid time.

Winter's Seed Store has been busy moving a carload of Cannas received last week from the East, and which are meeting with a ready sale. They are also shipping many orders for the "Evergreen Brand" of fertilizer which they are handling for the D. D. Johnson Co.

J. A. Valentine and Emil Glauber of Denver, Colo., arrived in Chicago on Monday morning, and joined the party of Chicago florists who left for Pittsburgh on the 5:30 p.m. train Tuesday. Among those from Chicago and vicinity who will attend the A. C. S. convention in that city are C. L. Washburn, W. N. Rudd, Carl Cropp, M. Barker, Geo. Asmus, N. J. Rupp, P. J. Foley, A. T. Pyfer, Fred Lautenschlager, P. Olson, N. Zweifel, F. Dörner, W. C. Johnson and August Poehlmann.

B. Olson, formerly with J. H. Kidwell, has taken possession of Irason's store on 47th st. recently occupied by the late John Morgan.

Heinz & Hout of Niles Centre, Ill., have taken charge of the place given up by Albert Frymann; the plant consists of six large greenhouses which are devoted to the growing of Roses.

Adam Graham of Cleveland, O., spent a short time in this city last week, visiting friends. Mr. Graham is on his way to Japan, expecting to be gone for some time.

Owing to the shortage of coal R. R. Davis & Co. of Morrison, Ill., had frozen a range of houses covering 40,000 ft. of glass which is used for forcing Cucumbers.

C. L. Washburn says they are beginning their seventh week of sleighing at Hinsdale, Ill. This is the first time since they have been established at said place that this has occurred, and the prospects are that it will continue several weeks more. Mr. Washburn has taken with him to the A. C. S. convention some choice blooms of O. P. Bassett Carnation.

D. D. Johnson of the Evergreen Brand Fertilizer, has returned from a trip to Ohio, and will leave shortly for a trip to Michigan in the interest of this business.

This firm will mail a reasonably sized trial package of their fertilizer, free, to any State experiment station, providing the application is made direct by the official in charge of the station.

The coal question still remains a problem and as yet deliveries are as uncertain as for some time past. One thing in the favor of the growers is the rise in the temperature, which has relieved them of the necessity of consuming such vast quantities. The amount of coal that has been used this past six weeks far exceeds that between similar dates of recent years.

In the retail store windows the shortage of stock is quite noticeable, as many are utilizing Immortelles, greens and preserved leaves in place of the cut flowers usually displayed.

We noticed at Chas. McKellar's a fine lot of Cyclamen plants full of bloom; they are meeting with a ready sale.

E. C. Pruner of E. H. Hunt Co., is attending the A. C. S. convention this week.

HOERBER BROTHERS

ROSES and CARNATIONS a specialty

Prompt attention to all orders.

51 Wabash Ave., CHICAGO, ILL.

Greenhouses, Des Plaines, Ill.

Long distance telephone, Randolph 2785

Please mention the Exchange when writing.

Telegrams reaching some of the wholesalers asking for supplies of Roses indicate that Chicago is not the only market suffering for want of stock; it is impossible to fill any shipping orders for Roses at present writing.

The installation of officers of the Chicago Florists' Club will take place at the regular meeting of the Club, Thursday next, February 3, at Union Restaurant.

Robt. W. Leonard, son of Simon Leonard, president of the Leonard Seed Co., was married Tuesday, January 18, at Kalamazoo, Mich., to Miss Allita F. Hotchkiss. Mr. Leonard is a traveling salesman for the firm of which his father is head; congratulations are extended.

An article by Mr. Leonard on how to grow plants and vegetables by the aid of electricity, as tested at the greenhouses of Peter Reinberg, appeared in last Sunday's Tribune.

H. R. Hughes, the West Side florist, is preparing a very attractive Valentine card, which will be mailed to all the bachelors in his vicinity.

Visitors: John Bertermann of Indianapolis, Ind.; C. B. Knickman, representing McHutchison & Co., N. Y.; Fred Dörner, Lafayette, Ind.; J. W. Steiner, with R. R. Davis & Co., Morrison, Ill.

The regular weekly meeting of the Florists' Club Bowling League took place Thursday evening, Jan. 20, at Bensinger's alley, with the following result, three games each team:

CARNATIONS	vs.	VIOLETS
Total, 2225		Total, 2354
ORCHIDS	vs.	ROSES
Total, 2253		Total, 2010

Indianapolis

Mr. and Mrs. Richard Koots are the proud possessors of a fine baby girl. John Rieman reports an unusual run in made-up pieces. His widow presents a most attractive appearance at this writing.

Secretary Baur has left for the Pittsburgh meeting.

Mr. and Mrs. John Bertermann have left for an Eastern trip. They expect to take in the Carnation meeting while away.

Messrs. Smith and Junge inspected the various ranges at New Castle last week. They reported everything in fine order and also a pleasant time with their brethren there.

Edward Bertermann is taking a much needed vacation.

A new flower stand is located at the corner of Ohio and Illinois sts.

Messrs. Robert Ellis and Irwin Bertermann spent a day last week at the E. G. Hill Co.'s establishment in Richmond. There is always much of interest at Hill's and this visit proved no exception. The many varieties of new Roses and Carnations would consume much time of any flower lover. It would be impossible to enter into lengthy detail writings of the many worthy plants found there or to justly outline a few novelties, which will later on be found over the entire land. James Whitcomb Riley, the variety ostensibly visited, is doing nicely under Joe's supervision.

Tomlinson Hall Market reports a brisk wholesale and retail trade. But little if any stock remains at the close of each market day and prices are a trifle better than those of last season.

Homer Wiegand is planning a trip to Louisville in the near future.

Wm. Schilling is showing some fancy Begonia plants.

Visitors: Mr. White with Ralph M. Ward & Co.; Mr. R. Spero with Chas. Zinn & Co., both of New York City.

I. B.

The Troubles of the City Tree

Many and increasing are the forces which work against the tree in the crowded city. Gas and sewer pipes poison its roots. Horses gnaw its bark. Sidewalks and pavements pinch its feet. Overhead wires cause its branches to be lopped off. Falling wires and poles, in time of ice storm, break down its branches. The tree has a hard time of it in the city.

*Insure Yourself Maximum Crops of Excellent
Quality by Feeding and Nourishing
Your Plants With*

Evergreen Brand Fertilizer

*Specially manufactured for growing Flowers, Ferns,
Palms, Etc.*

Its recommendation is based upon careful, extended and disinterested experiments; showing that this material is a nourishing, easily-available food for crops.

It consists of about half Animal matter and half Minerals, treated and refined; thus it is free from all deleterious substances and will not burn or injure the most delicate plant root, unless an extraordinary amount is applied at the same time.

It is immediately available, and its effect upon most crops may be noticed within six days after its application.

It prevents the onslaughts of plant disease or insect pests.

It will greatly benefit all greenhouse crops; notwithstanding the richness of the prepared soil, since it furnishes all the Plant Food elements in

available forms and sufficient quantities to meet the needs of the plants.

It should receive careful attention, because its right use permits not only an economical utilization by the plant but a control of its growth; it may be used in such a way as to change the natural tendency, and thus improve it for specific uses; thus, in addition to the increase in yield which it produces, it enhances its market value.

Its uniform action seems to be to stimulate the capacity of the plant for absorbing water and developing foliage and stem growth, and to bring out numbers of new shoots; hence with Roses and other flowering plants, the best results are secured when this fertilizer is applied during the early growing period, as the energies of the plant are immediately concentrated upon developing its growth.

Can be used at any time during the growing season, dry or in solution.

Put up in 12-pound cans, price \$2.00

The Week's Work

BY FRITZ BAHR

Carnations

Preventing Disease in the Cutting Bench

It is a common practice with many growers to use the sand in the cutting bench over and over again. How very wrong this is many of us have had to find out. There are times during winter when one can get caught short of sand, and only then is there an excuse for using the same sand twice for propagating. Because you haven't had, or noticed, any bad result from using sand for several batches of cuttings isn't any reason for doing it, for it might be a dear experience when you do get a good dose of fungus and stem rot in some valuable cuttings. The good grower realizes that there is no better nor surer way to fight disease of any kind in plant life than to prevent it. We are, all of us, very much in darkness, as yet, regarding the proper remedies for plant diseases of any kind. No one will dispute that, when plants are really sick or infected with disease, with all that is known in science up to date we, only too often, lose the plants. With indoor stock this is even more noticeable; but one thing we can do, and that is by cleanliness prevent many fungous diseases. A cutting of any kind affected with disease, even if it doesn't die, has a hard time to grow into a good strong plant, therefore why not take every precaution to avoid trouble whenever possible. I am sure in a great many cases where the grower looks for outside help to solve the problem of stem rot, especially on the young stock, it can be traced to unclean conditions; and particularly is this the case when the loss of cuttings is caused by fungus. I don't mean to say that this holds good in every case, for there are other causes to bring about conditions favorable for the spreading of diseases.

Treating the Sand for Propagating Purposes

For the Carnation grower it is certainly of great importance to use nothing but fresh sweet sand. Whether this comes from pit, lake, or river is immaterial, but have it free from other matter. Soil of any kind in sand is liable to breed fungus during the dark winter months. The right way to remove every bit of sand from the bench after a batch of cuttings is rooted, and thoroughly clean every corner of it before the fresh sand goes into it. If there is any danger of fungus, the following formula is as effective as it is old: Two quarts of ammonia (aqua) strength 10%, and one pound of sulphate of copper, when the sulphate is properly dissolved use one tablespoonful of this mixture to a gallon of water. It doesn't hurt in the least to dip Carnation cuttings in this solution before they go into the sand, or water the sand before the cuttings are inserted. It is a sure preventive of fungus. While there is a good reason for using old sand over it should always be made use of, no matter what kind of plants you are propagating. One other important point with the propagating bench is to have it arranged so that there is perfect control of drainage. If a cutting has to be in the sand 20 to 30 days, a soaking wet condition of the sand during all of that time can't be good. You may succeed in rooting the cuttings, but you also bring about favorable conditions for disease, as well as weaken the cuttings, which makes them more subject to disease. Drainage is as necessary in the cutting bench as anywhere else, more if anything—so see to it that the water has a way to get through.

Verbenas

Grow to Supply a Demand for Better Stock

The Verbenas, considered by many as common plants, are as much in demand for bedding as ever. We may not sell as many as we did years ago, when we did not have the great bedding Cannas, and when Salvias were not used as they are today. Then, the Verbenas played an important part, especially as low priced plants. Stock in 2" or 2½", a single stem with a flower on top, was sold by the tens of thousands. It was a matter of cheapness, and while certain trade today even demands such stock there is also an increasing demand for well grown plants noticeable, plants grown in 3½" pots with four to five flower heads. Bushy plants which can be sold at a good price have the preference when once introduced. The retail grower will find the growing of such not only more pleasant but more profitable.

There is more and more demanded of us each year. If we want to stay in the ring the day where quantity was the watchword with the florist is rapidly passing. Quality comes first, and while it may seem hard work to get a certain class of people used to the paying of a higher price for a better article, yet this ought to be our constant aim. Everything that we use to do business with is constantly getting dearer, and while the florist has kept pace, faithfully, in the cut flower line, his progression hasn't been so pronounced with bedding stock. The "one dollar per dozen" sign for 4-inch Geraniums is still made use of by many. If the plants are not worth any more they don't belong to 4-inch pots. You can't grow a good Geranium of that size for that price, and so with Verbenas. Grow a few good plants in larger sized pots than 2-inch. Let your customers see the difference, and charge accordingly. They may buy less in number, but will take the better plants, and that's the object. Grow fewer in number in a certain space, but better stock.

Growing the Stock from Seed

In order to have the best results with Verbenas when grown from seed, sow early and let the plants come along in a house not over 50° at night—a little below is even better. This will produce a short, stocky growth and dark leaves, while a high temperature means a weak spindly growth. Sow now. If separate colors are desired select white, deep and light pink, red and just a small portion of blue. They will come almost true from seed. We find the white and the deep pink the best sellers. When large enough, transplant the seedlings into flats, and later into 2½'s. Verbenas like a good stiff loam, to which should be added one third of well rotted manure. When the plants are about 4" to 5" high we pinch them back to encourage the little plants to branch out. Sometimes this is not necessary but, especially when grown in close quarters, if not pinched the plants will run up into a straight shoot and bloom. A shift of the 2½ plants into 3½'s about April 10, and giving the stock plenty of room on a sunny bench, will result in nice bushy plants, which will have seven to ten good straight shoots each, and from 3 to 6 open flowers by bedding out time. We find stock grown from cuttings, while, of course, always true to name, is not as well adapted to the above described method of culture; they do not make as much growth as the seedlings, but are easier to get into bloom, which fact, when only small plants are required in bloom, is in their favor.

Marguerites

Small Stock for Made-up Dishes for Easter

No matter how many new Roses or Carnations may appear, the public does not seem to tire of the Marguerites, or Daisies, one bit. There is always a demand for them, either as cut flowers or as pot plants. The great times for selling the latter are Easter and Decoration Day. A well grown plant in bloom, one which isn't too tall, always sells on those occasions. To have a plant in a pot not too large, and foliage down to the pot, is almost impossible, for as soon as the wood of the plants hardens the leaves drop off. The only complaint we ever had in selling Marguerites was on that account; while the tops of the plants were all that could be desired the lower parts were bare, and thereby made the whole look bad. To grow the large plants, if wanted for pot plants in bloom for Easter, requires a great deal of attention. A crowded condition should be avoided, and a really much better way is to use smaller plants and put a number of them into dishes ranging from 6" to 12" in diameter. In that way you can have both the same amount of flowers as on a large pot grown plant, as well as foliage right down to the rim of the pan. This will require the growing on of the plants in small pots, such as 2½'s or 3's up to two or three weeks before Easter, and then making up the dishes or pans they are to be sold in; for if you were to plant the small plants into the dishes now nothing but a rank growth would be the result. A Marguerite, to bloom, needs to be pot bound, so any stock that you have now in 2½'s or 3's does not need another shift, if wanted to bloom for Easter; nor do they want to be cut back—give them room, and an occasional dose of liquid cow manure. Of course, if the small stock has been in the pots for some time and is in need of a shift it will be better to let it have a half size larger; even then the plants can be used for made-up dishes. The stock of Marguerites intended for Spring sales should be kept growing; shifting the 2's or 2½'s into 3's and pinching the plants back will make them bushy and prevent them from blooming for weeks to come.

Spiraeas

Cultural Notes for the Easter Stock

There are but few of us who could not get along nicely with the Spiraeas at Easter, and yet whenever we haven't any for that day we seem to miss them. They are of most value

Get ready to grow plants for Spring

It's time to learn all about:

Write to-day to

Sunlight Double Glass Sash Co.
933 E. Broadway
Louisville, Kentucky

Please mention the Exchange when writing.

The double-glass with air space is a transparent blanket. Covering and uncovering saved. Plants get all the light all the time and grow strong.

Thousands in use—north, east, south, west—get our catalog. It gives valuable information. Then get some sash. They yield big returns every season for a life time.

Hot-Bed Sash

We have stock in all grades, including the "Best" made of Washington Red Cedar. You will find the Cedar Sash superior even to the old-time White Pine Sash. Write for prices.

Do you want to arrange part of your sash for doubled glass? For 30c. per sash we will supply you with sufficient glass-seat-moulding to do this in a satisfactory manner.

when used for decorating; in that way they will often take the place of more valuable plants and answer fully as well. The retail grower can also make use of left-over plants whenever flowers and green are wanted for funeral work; quite frequently, a few pots will come in very handy in that way. The unsold plants if planted out in the nursery row will in two years make fine stock again for forcing. While it doesn't require nine weeks, to get the plants of *S. Japonica* into bloom, one should allow plenty of time, for if the plants had a 60° house 10 days before Easter, a lower temperature will help to harden the plants and thereby have them in better shape. The old method of starting the stock below some bench is all right when short of room, but whenever this is not the case let them start to grow on the top of the bench. I have seen *Spiraea* make 18 inches of growth below a bench before they were brought to the light—this will not happen when the plants are on top. A bench in a Carnation house for the next four weeks will be the proper place for stock intended for Easter. By the end of February if not sufficiently advanced—by that I mean that the flowers buds hardly show—Rose house will soon give results. While the *Spiraea* are hardly ever infested with insects which would require fumigating, some of the other stock in the house they are in most likely does and as the fumes of tobacco ruin the tender leaves of the *Spiraea* use care in this respect. While the plants are small cover them properly whenever fumigating is necessary, and when the plants are of considerable size either remove them, or instead of fumigating, spraying with a nicotine solution might be recommended. The attention of the beginner should also be called to the fact that the plants should never be allowed to suffer for the want of water.

Lily of the Valley

Forcing the Last Fall's Imported Stock

From now on, with each week as we come nearer the time of the natural flowering of the Valley, less bottom heat will be required to get the pips to bloom. A temperature of from 80° to 85° for the roots to be in will give good results. For the retail grower it always pays to have a good number forced in pots; quite frequently one finds a customer for such, and if not sold, they can be cut, for the flowers and foliage on the pot plants will be equally as good as those forced out of pots. Be a little particular when potting the pips; have the outside row close to the inside of the pot and let only the pip itself project above the rim of the pot. Have the pips evenly distributed and even on top. It matters but little what you use to plant the roots in, the main point is to maintain a steady bottom heat and to maintain the roots suffer for the want of water, for heat and moisture are the only things practically required to bring the foliage and flowers, and it depends on the proper care in those respects as to what success you have with them. There is no necessity of maintaining 85° overhead, 60° is nearer right, but shading is necessary to get the desired length of stem.

Kalamazoo

A week of good weather together with the wedding of one of the most popular young ladies of the city made most of the florists busy with home trade. Shipping trade has been good right along, the dull weather keeping the supply easily under the demand. Bulbous stock of all kinds and Callas are in plenty but cannot be called in active demand, this stock chiefly being used as a filler.

Activities have already commenced for a considerable amount of building this year. Van Bochove's have already received one carload of glass and one of pipe and fittings, two boilers of 150 h. n. each, and the necessary quantities of iron gutters and roofing material for the 30,000 ft. addition they intend to erect as soon as weather permits.

William Thomas is preparing to erect a house, 100x27 ft., with all the necessary modern improvements, in order to meet the demands of his increasing business. Fred Marker will also be busy with one or two re-modeled houses; so, on the whole, we expect to be able to accommodate all the business that comes our way.

James Fraser, who made many improvements last year, has now an up-to-date establishment and is doing good business. He expresses great satisfaction with the solid bed arrangement in his Carnation houses which has more than equaled the products of the raised beds. A bed of Callas Lilies is certainly good proof of his assertion, and promises to be a money maker for him for a long time to come.

I am sorry to report the death of Mr. Neuner's wife, a short time ago. Mr. Neuner is Van Bochove's Rose grower.

S. B.

3 Houses, 150x30—7 foot sides

It was during that near blizzard last month. Mr. Schuneman's houses are open to a clear wind sweep for miles. When our man went down after the storm there wasn't a cracked glass in all three houses, and they were as clear of snow and ice as on a summer's day.

The other fellow had a truss house—(not an extra wide one, either). When the wind struck his house, he thought sure it

NEVER HAD A BROKEN GLASS
WHILE HIS NEIGHBOR'S GREEN-
HOUSES NEARLY BLEW DOWN

was going down—now he has planted a windbreak to save it. It's these straight from the shoulder facts brought out by real tests that show just how good and staunch the Hitchings houses are.

It will pay you many times over to put up Hitchings houses.

Let us hear from you.

THINK THIS OVER

OUR factory has turned out more cypress greenhouses than any other factory in America. We have furnished the largest range in the world and the finest commercial plant in existence to-day. For forty years we have been in business. Greenhouses have been supplied to every State in the Union, to Canada and Mexico and to Europe. . . . There are more commercial greenhouses in the U. S. of our manufacture than of any other firm in existence. You can buy the house all complete from us, or we'll furnish any part of it. . . .

BULBS and THEIR CULTIVATION

By T. W. SANDERS, F. L. S., F. R. H. S.
Crown 8vo., Cloth, 212 pages, 42 illus.

A Practical Guide to the Cultivation and propagation of hardy, greenhouse and tuberous-rooted plants, including lists of all the genera, species and varieties worth growing. Price, postpaid, \$1.25. Address, **FLORISTS' EXCHANGE**, 2 to 8 Duane st., New York.

Luther Burbank

The New York Times of Jan. 16 contained an article headed "Doubts Cast on Burbank Wizardry," in which attention was called to the part that gentleman's name had recently played in the lurid advertising of certain land boomers, the New South Farm and Home Company, with offices in Chicago, that concern having, in October and November last, published a two-page advertisement in numerous papers headed "Luther Burbank's Marvelous Farm Products will make your Fortune in Florida," and in the course of which advertisement were included two letters purporting to be from Mr. Burbank. One of these letters contained an alleged facsimile of his signature. The attention of our readers to this advertisement was called at the time (Page 732, issue of Nov. 13).

In addition, the New York Times' article dealt with the controversy concerning the Wonderberry and the so-called Spineless Cactus. And it also spoke of the \$10,000 annual grant to Burbank for ten years from the Carnegie Institute, in order that he might pursue his scientific studies unhampered by lack of funds.

In justice to Mr. Burbank and in order that he might be heard from, we reprint his reply to the Times' article, telegraphed from Santa Rosa, Cal., his home.

To the Editor of The New York Times: SANTA ROSA, CAL., Jan. 17.—At the time of introducing some of the first of my spineless Cactus (Opuntias,) nearly three years ago, the following words occupied the first place in the catalog:

"For more than fifty years I have been quite familiar with thornless Cactus of many species and varieties. In fact, one of the first pets which I had in earliest childhood was a thornless Cactus, one of the beautiful Epiphyllums.

"The Phyllocactus and many of the Cereus family are also thornless, not a trace to be found on any part of the plants or fruit.

"Thus the somewhat indefinite popular name of 'thornless Cactus' has been used by persons unacquainted with these facts, for he it known, that a thornless Cactus is no more of a novelty than a thornless Watermelon.

"But among the Cacti, which grow to an immense size with great rapidity, and which can be readily cultivated in garden, field, or desert, no perfectly thornless ones were known and very little interest was taken in the Cactus of any kind, either thorny or thornless, as to their agricultural or horticultural value, until the work of improve-

ment was taken up on my experiment farm and improved. Perfectly thornless, rapidly growing varieties have been produced and made known within the last few years.

"The facts in the case are too well known to need comment. Let some one even now mention a single absolutely thornless Cactus of agricultural value produced by anybody or not produced on my grounds.

"I am exploited, whether willing or not, and very much against my own wishes. Does it pay to exploit commercially a proposition which does not stand on a sound basis of character and value?

"It was mutually agreed upon and fully understood both by the Carnegie Institute and myself that I should have the privilege of supplementing their inadequate annual aid toward the continuation of my experiments by the sale of my productions as before.

"I am now past 60 years of age. I have done good work and no one is dependent upon my efforts. The grant brought with it more care, responsibility, correspondence, and visitors and a full crop of envy and jealousy, and but for the advice of friends I should have dissolved my connection with the institution last year.

"Personally, I have no desire for wealth or fame—a thirst for these is the root of many evils. My ambition has been to leave the world better for having passed this way.

"To be misjudged is a passing trifle; to have lost a life of honest, earnest labor is a tragedy."

It will be noticed in his reply that Mr. Burbank does not deny the connection of his name with the misleading advertising of the New South Farm and Home Co. of Chicago, which is to be regretted.

Landscape Gardener (Male) Wanted

The United States Civil Service Commission announces an examination on March 3, 1910, to secure eligibles from which to make certification to fill a vacancy in the position of landscape gardener (male), \$2400 per annum. Engineer Department at Large, Washington, D. C., and vacancies requiring similar qualifications as they may occur.

Applicants should at once apply to the United States Civil Service Commission, Washington, D. C. No application will be accepted unless properly executed and filed with the Commission at Washington. In applying for this examination applicants should ask for "Form No. 104, Landscape Gardener (male) Engineer Department at Large," and should do this without loss of time.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSEYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXIX. NO. 6

NEW YORK AND CHICAGO, FEBRUARY 5, 1910

One Dollar Per Year

SELECT FERNS

For Fine Store Trade

We offer a grand lot of exceptionally well-grown plants of the different varieties of

NEPHROLEPIS

which will be found one of the best-selling and most profitable plants that florists can handle. Our stock is in unusually fine shape, and we will guarantee it will please the most exacting, as it is exceptionally good value at the prices quoted.

Improved Elegantissima. The finest of all this type. It was introduced by us in 1905. This form of *Elegantissima* has been greatly improved, and shows no tendency to revert to the Boston, making it the most valuable fern of this type.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8-in., \$12.00 to \$18.00 per dozen—according to size.

Superbissima. Introduced by us in 1908. A very unique and distinct novelty. Its distinguishing characteristics are its dark green foliage and dense growth. Fronds are very heavily imbricated, making them very dense and compact.

Strong plants, 4-in. pots, \$3.00 per dozen; 6-in., \$6.00 to \$9.00 per dozen—according to size; 8 in., \$12.00 to \$18.00 per dozen—according to size.

Bostoniensis, Piersoni, Whitmani, Scottii—Extra fine plants, 6-in. pots, \$6.00 per dozen; 8-in. pans, \$12.00 per dozen.

1000 Pounds of Rhubarb Seed

CROP OF 1909

This seed was taken from the field in a mature state; consequently, every seed will germinate. Seedsmen can sell lots of it, as there is a great demand for "Forcing Rhubarb Roots" in the winter. The best and cheapest way to raise Rhubarb Roots for forcing is from seed, and in one year.

I have also 200,000 two-year-old Asparagus Roots, 30,000 Peach Trees, 5000 Apple Trees, English and Black Walnuts, Plum and Quince Trees, and Strawberry Plants.

European Notes

Three consecutive dry days, the first for many weeks, accompanied by moderately sharp frost, have enabled us to get on to our sodden fields and form a fairly accurate opinion of the condition of the plants of Brassicas, Turnips and Rutabagas. It must be admitted that the outlook is far from cheering.

Great ugly gaps are apparent; in some places not more than one plant is visible in ten yards and that one looks ready to perish.

Not only have the floods destroyed the plants but on the lighter and higher lands the vermin, owing to an abnormal mild season, have had free play, and the more vigorous the plant the more it has suffered. This is especially true of Cabbages and Rutabagas, while Kales and Brussels Sprouts, being coarser in flavor, are left severely alone and have only the inclemencies of the weather to contend with; that, however, is bad enough.

A visit to the barns where the Onions are stored waiting a favorable opportunity to plant them, finds a large per-

RAWSON'S RENOWNED SPECIALTIES

FOR FLORISTS

DAHLIAS

To clear a large surplus, we give Florists the first opportunity to purchase some of our latest Dahlias at remarkably low prices. The following list is only an extract from Rawson's florists' catalogue.

Cactus Dahlias

	Per 10	100
Alfred Vasey, pink	\$0.75	\$6.00
Alpha, white, striped crimson	1.00	8.00
Ambassador, pure white	1.00	8.00
Amos Perry, scarlet	1.00	8.00
Antelope, yellow	.75	6.00
Aschenbuedel, pink	.90	7.00
Bienenreges, scarlet	.75	6.00

FLOWER SEEDS

SALVIA SPLENDENS

	1/2 oz.	Oz.
Grandiflora	\$0.25	\$1.50
The best tall Salvia in the market		
Compacta	.40	2.50
Bonfire	.40	2.50
Hardly any foliage, but masses of flowers		
Lord Fautleroy, very dwarf	.75	4.00
Maroon Prince, deep maroon	.75	5.00
Fire Ball, most intensely colored	.75	6.00
Silver Spot, leaves spotted very attractive	.25	1.50
Zurich. The best salvia yet introduced. Plants grow very compact, show little foliage and bear heavy flower spikes, which are thickly laden with bright scarlet flowers. Flowers early in July and remains in bloom with later varieties.	1/2 oz. 75c., oz. \$5.00.	
Fatens (Late Salvia) 1-16 oz. \$1.00.		
Salvia Splendens. King of Carpets. The best dwarf bedding Salvia on the market today, outtravailing even "Zurich". The plants branch from the bottom and to such extent that the main stem is never visible. All side branches droop completely to the ground, making the whole plant a perfect half ball of fire. The plant grows but 16 inches high and flowers even earlier than "Zurich". 1/2 oz. \$1.00, oz. \$6.00.		
The veteran Salvia grower, Mr. F. Bedman, says: "About the Salvia, 'King of Carpets,' I have done very well considering the dry weather that we have had, and I consider it one of the grandest dwarf salvias that I ever saw."		

AGERATUM

	1/2 oz.	Oz.
Extensively raised as a pot plant and used for edging		
Lasseauxi	1/2 oz. 20c.	\$0.60
Messanum		.15
Albim		.20
Blue Perfection		.30
Dwarf Imperial White		.25
Dwarf Imperial Blue		.25
Dwarf Swanley Blue		.30
Dwarf Little Dorrit		.25
Dwarf Little Blue Star, 1-16 oz. 75c.		

ANTIRRHINUM

	1/2 oz.	Oz.
A most valuable plant for the cut flower market, easily grown and very profitable; we have been careful to select but such colors as are ready sellers.		
RAWSON'S TALL GIANT. This strain grows three to four feet high and is covered about two-thirds with single flowers of grace and beauty.	1/2 oz. Oz.	
Finest Mixed		\$0.40
White	\$0.25	.75
Scarlet	.20	.60
Yellow	.20	.60
Dark Rose	.20	.60
Delicate Pink	.20	.60
Coral Red	.25	.75

ASTERS

Rawson's New Midsummer Aster
The colors are true and hardly any open-centered flowers among them.

	1/2 oz.	Oz.
Pure White	\$0.60	\$2.00
Delicate Shell Pink	.60	2.00
Royal Purple	.60	2.00
True Lavender	.60	2.00
Bright Rose	.60	2.00
Finest Mixed	.60	2.00
Aster, Rawson's Late Branching. Flowers are very large in size and borne on long, stiff stems. It is one of the best and most popular varieties for late flower markets.	1/2 oz. Oz.	
Finest Mixed	\$0.25	\$0.75
Crimson	.30	1.00
Dark Blue	.30	1.00
Light Blue	.30	1.00
Rose	.30	1.00
Shell Pink	.30	1.00
Scarlet	.30	1.00
White	.30	1.00
Dawn of Day. (Novelty, 1908). The earliest flowering Aster in existence. Fine white, perfect in form and growth, long branching stems and flowers; often three weeks ahead of Queen of the Market. It is of branching habit and very full and freely cut will continue to bear blooms until late in Fall. 1/2 oz. 50c., oz. \$2.00.		

Rawson's Daybreak. This variety must not be compared with the strain offered elsewhere and a trial will convince the ever-so-critical of its superiority. 1/2 oz. 40c., oz. \$2.50.

Rawson's Parity. (Pure white.) Of the same type as Daybreak, differing only in color, which is a pure glistening white. Just as free-flowering and symmetrical as Daybreak and undoubtedly unsurpassed as a white bedding variety. 1/2 oz. 60c., oz. \$2.00.

Rawson's Queen of the Market Aster. The best early Aster for the Florist, quality being very much improved. Finest Mixed, 1/2 oz. 15c., oz. 60c. Crimson, Dark Blue, Light Blue, Rose, Peach Blossom, White. 1/2 oz. 20c., oz. 60c.

centage so soft and sprouted as to be practically useless.

French growers are expecting much better prices next season; this they certainly deserve for the large surplus of the past two seasons now on hand will not be salable in 1911. As the prices of Onion bulbs for table use in the French markets have been steadily rising it is possible that a largely increased demand for the seed may spring up, in which case surpluses would be within reasonable bounds.

The later threshings of Radish, both in France and England, are causing very serious trouble and loss. To all outward appearance the seed seems to be all right, but within 48 hours after being sowed it begins to sweat and we have the greatest possible difficulty to save it. The waste in dressing adds fully 30% to the cost and confirms the growers in their resolve to quit the culture. The profits of three good seasons will be needed to compensate for the losses of 1909.

It cannot too strongly be impressed on our friends on your side how absolutely necessary it is that they should keep a very close watch on all seeds from Europe now arriving, opening all packages promptly, so as to admit the dry air and thus keep the seeds in good condition.

EUROPEAN SEEDS.

American Notes

The Opening Season

Gradually the opening season is gathering momentum, and with each succeeding day our seedsmen find themselves receiving an increasing number of orders. The wholesalers especially are beginning to be very busy, as the sellers of seeds throughout the country, as a whole, are placing their orders much earlier than usual; this early ordering is attributable, no doubt, to the widespread reports that seed crops are short, and that the late comers will fare poorly. As a rule, the seed catalogs are now pretty well distributed. Speaking of the distributing of seed catalogs, every year the question comes up as to when is the very best time at which to send them out to prospective customers. The answer to this much mooted question must always depend upon the class of business being done; but for those sellers of seeds who do purely a local business there are many very substantial arguments in favor of sending out their lists just before their customers are ready to buy their season's supply of seeds, which will, of course, be several weeks later than the date at which the large mail order houses mail their seed books. Counter retail sales have started quite a little the last few days; another week or so will see all lines getting well underway. On every hand all signs point to a most prosperous season.

The New African Daisy

Among the many excellent flower seed novelties being offered this season, none bids fair to have a larger sale than the new "golden-orange" Daisy from South Africa. This remarkably showy annual was discovered by the late Peter Barr in Namaqualand, South Africa. On account of its easy culture and uniquely colored flowers it is sure to be a favorite. The plants themselves are of neat, branching habit, grow about fifteen inches high and bloom profusely. Its Marguerite-like blossoms, from two to four inches in diameter, show a glossy rich orange-gold, with dark-colored disc surrounded by a black zone, well suited for groups or borders; it produces its pretty flowers very early after being planted out in the open ground, in sunny situations, and will continue to flower during the whole Summer. This novelty gained an award of merit at the Temple Show, London, in 1907. The retail packet price is 25 cents.

Catalog Illustrations

The writer has several times in the past called attention to the matter of properly illustrating our seed catalogs. It would, indeed, seem absolutely imperative in these days of advancement in all lines of our business, that we should be especially careful regarding the use of half-tones, electrotypes and zinc etchings in our catalogs, and be absolutely sure that such, when used, truthfully and ac-

Please mention the Exchange when writing.

curately represent the subjects as per the titles affixed to them. The day has passed when almost anything in the way of a "cut" will do to illustrate the text; unless a true and representative picture of the variety to be described is procurable, it is very much better to use nothing at all in the way of an illustration. Within a few days the writer has received several suggestions along this same line and will discuss them in this column just as soon as opportunity offers.

Cannas

Nothing in Spring bulbs will be more in demand the coming season than the better varieties of the dwarf-growing, large-flowering Cannas. There was a time, and not very long ago, when no plant was acknowledged to approach the Geranium in value for bedding purposes; but during the last few years the Canna has taken its place as a very close second to the ever popular Geranium in this respect. The Canna also has the advantage of being less bulky to handle than the Geranium, and either in dry roots or started plants is especially adapted for the seedsman to handle. Do not neglect to provide a generous supply of the best sorts of Cannas for your trade this season, you will find them most profitable and rapid sellers. V.

Philadelphia Seed Trade

The Paris disaster has made its impression on many in the seed trade here, for shipments of early forcing vegetable seeds were expected daily, but later advices received were to the effect that much of the stock was hard to get at and that orders still on hand must wait for the subsiding of the flood. It is sincerely hoped that the stock is uninjured, as many Southern orders are waiting to be filled, and the inability to execute them will result in quite a financial loss, both to gardeners and seedsmen.

N. Simon & Son report a heavy Spring trade and orders have been booked far in excess of the firm's expectations and the continuance of this amount of business should result in a satisfactory year's total.

Henry A. Dreer, Inc., have been busy

the past few weeks replenishing the shelves and drawers of the store with Spring necessities and books on all matters pertaining to horticulture are prominently displayed on the counters of the store. Kil-O-Scale, an invaluable insecticide for ridding trees of San José scale, is being pushed quite extensively by the firm, as all hands are fully alive to the importance of preventing the spreading of this harmful pest, and the remedy can be applied at so small a cost that its adoption will be general, as soon as its qualities are more widely known.

The Johnson Seed Co. has an attraction—several prize winning Brazilian ducks on show in the store window, which were secured from the recent poultry show. The display serves the purpose of advertising the many poultry foods and appliances handled by the firm. Mr. Sherry, whose mother recently was reported quite sick from a fractured hip, is glad to say that the aged lady is recovering rapidly, and that the accident is not quite so serious as at first supposed; the expectations are that within a few days she will be removed to her home. The firm, this week, has secured the services of several extra persons to assist in the Spring work.

Orders for Aster seed have commenced to show up and the many varieties to select from as listed in the catalogs should prove interesting to the prospective buyers.

The Moore Seed Co. is handling a fine grade of low priced tuberous Begonia bulbs, and is also showing a great display of farming and florists' implements, including fine tooth cultivators, seed planters, saws, knives, shears, etc.

The Henry F. Michell Co. is glad to say that its brand of Asparagus plumosus seed is fully up to the standard of former years, and that the bulbs of Gloxinias and Begonias are fine and plump; from testimonials received from local florists concerning last season's results of growing on these bulbs the house feels assured that its sales will increase.

Carl Cropp, secretary of Vaughan's Seed Store of Chicago and New York, was a visitor here this week, and from his conversation one can readily understand why he is occupying such a position as he is first last and all the time a thorough seedsman.

Please mention the Exchange when writing.

THE EXCHANGE—Best Advertising Medium

NOTE—We exercise great care to have all seeds sold by us pure and reliable, but it is mutually agreed between ourselves and the purchaser of this bill that no warranty is either given or required.

Plaintiff admitted that he had at sundry times seen various catalogs of the Iowa Seed Co., but denied ever having read the disclaimer or non-warranty clause, which is printed in three different parts of the catalog. Plaintiff also had a copy of a Special Price List of Clover and Grass Seeds on which the disclaimer was printed.

Defendant testified that for more than thirty years it had continuously used the disclaimer in selling seeds, and had never warranted them in any respect.

Defendant had on exhibition not only its own catalogs, but the catalogs of more than 100 American dealers, and about 40 foreign seed dealers, all of which contained a disclaimer clause.

After four days' trial, which was contested and fought on every point, on Jan. 19, 1910, Judge McHenry finally ruled on motion of the defendant to dismiss the case.

In support of the contention on which he ordered the dismissal, the learned judge quoted from a decision of the Supreme Court of Pennsylvania wherein it held that whoever sells seed by a name, where the seeds are open to inspection of the purchaser, the seller cannot be held to an implied warranty. The Supreme Court of Montana has also rendered a similar decision; likewise the Supreme Court of the State of California.

The Supreme Court of the United States has said in substance that where there was a sale of personal property which is subject to inspection, the property not being manufactured to order nor produced by the vendor, that there was no implied warranty. Similar decisions have been rendered by the Supreme Courts of Iowa and New York.

The point in favor of the defendant on which the learned judge placed his strongest argument was to the effect "that the defendant in this case has continuously and persistently refused to sell under a warranty and has persistently and continuously advertised to the world that it would not sell its goods under a warranty. . . . Would it be right, moral or just under those circumstances, against the open and continuously published denial of its willingness to warrant, would it be fair, or just or right by a construction of law to foist upon this defendant a warranty that it never would have made or never intended to make?" Another point made by the judge was in the fact, "that there is a universally established custom among the seed dealers to sell without warranties, and to refuse to warrant, which custom has not only become generally known by their habits and conduct in specific cases, but by their publishing the fact to the world in every possible way."

This decision will prove of far-reaching importance, as it was our object to make it a test case, and the judge in rendering his decision has apparently considered each standpoint; not only is the disclaimer held to be good as applicable to an express warranty, but the universal custom of the Seed Trade during the many years past of printing this disclaimer in their catalogs and price lists, on stationery, tags, placards, etc., has been held to establish the custom and usage as a law, of which the customer or purchaser of seeds is bound to take notice.

CHAS. N. PAGE, Iowa Seed Co.

Sweet Pea Growing in California

Anton C. Zvolanek of Winter-flowering Sweet Pea fame, who left New York Dec. 16 for California, has just returned after a six weeks' absence. During that interval he has been doing great work in Santa Barbara, where he has his Sweet Pea trial grounds, and at some half a dozen points in Santa Barbara Co. and Shasta Co.; in fact, wherever good ground could be found for Sweet Pea planting.

In December and January and inside of three weeks' time, Mr. Zvolanek has planted 65 acres of his famous Winter-flowering Sweet Peas, 25 acres of Nora Unwin (white) and 95 acres, in some 18 varieties, of the late-flowering sorts, mostly Spencer and Unwin types. The planting was done entirely by machine, with the exception of a few rows of rare kinds, which were hand planted. The plows used turned up three furrows, with rows 4 ft. apart, and the planting is also done automatically by a machine which drops the seeds at any given number of inches apart.

No manure was used in this planting, nor is it required; neither will it be ne-

cessary to do any irrigating to bring the crop into maturity.

Mr. Zvolanek's eldest son, Charles, will have charge of the California fields in the future.

Mr. Zvolanek advises us that, while in California, he picked off his grounds flowers with 16-in. stems growing on 8 ft. tall vines. These were planted in August, began to bloom profusely the latter part of October, and at the time of his visit were still covered with blooms. Some of these vines had been in frost, when the thermometer had gone down to 28° and 29° in the early morning, and while the stems had been made so brittle that they would snap apart when handled, as would a thin icicle, no plant nor blooms were at all injured.

Mr. Zvolanek noticed quite a little defective planting of Sweet Peas in California, and says that the people there plant both too thick and too deep. The depth at which the Peas should be planted must not exceed two inches. The seed should be sown 2 in. apart and then thinned out to 6 in. for best results. If threatened by frost at any time, the growers should cover with cheese cloth. This latter point, naturally, is for amateurs and small growers.

Hybridizing Gladioli

The garden Gladioli, owing to the large size of the blooms and their open character, is one of the easiest of plants to fertilize, or rather pollinate, artificially. Healthy vigorous plants should be selected for seed bearers, and the bloom spike supported with a firm stake. The blooms should be visited in early morning as they open, and the anthers removed with the fingers, or better with slender forceps, before they have shed pollen, taking care not to injure the style or the three-part stigma, which will be ready to receive pollen about midday in bright weather or late in afternoon, or even next day if cloudy or dull. The blooms should, immediately after the anthers have been removed, be covered with thin cheesecloth, or "bobinet," firmly tied or pinned in such a manner as effectually to keep out bees and visiting insects. Ordinary mosquito netting will not serve after it has been wet with dew or rain, as the mesh becomes so loose that energetic little pollen-carrying bees force their way through, often entirely spoiling results. The pollen-bearing blooms should be carefully selected to open the same day and should be as well protected with muslin or fine netting as possible to prevent robbery of pollen.

About noon, when the anthers are covered with dry dust-like pollen, they can be pinched out with forceps and carried to the seed-bearing spikes in a covered dish to protect from wind. The anthers may be taken separately in the fingers, or with forceps, and lightly brushed over the stigmas, which should be erect and open if they have reached the receptive stage. One anther will usually suffice for a seed bloom if pollen is abundant, but in some of the lighter-colored varieties it is scantily produced and several may be needed. Occasionally the anther valves do not open freely enough to permit the escape of pollen, which may then be taken out with a narrow-bladed penknife, or better with a little instrument made of a flattened pin fixed in a wooden handle. The pollinated blooms should immediately be covered with the netting, which should remain on until they fade. If conveniences are at hand the work may be rapidly accomplished—several hundred pollinations being made in a clear day by an active worker. Pollen can also be used from cut blooms, the spikes being kept in water in a light room, free from flies or bees, but it gradually loses power when the upper blooms open under such artificial conditions. If the work is carefully done the resulting seeds will produce hybrids or cross-breeds as the case may be, and it is always possible that the ideal sought for may appear among the number. White garden Gladioli appear to be albinos, however, and rarely produce white seedlings with sufficient vigor to increase with commercial rapidity. Best results may probably be looked for in crossing the finest procurable whites and yellows together, though the raising of seedlings from choice white or very light kinds, both self-pollinated and inter-hybridized, should not be neglected by the breeder desirous of improving existing varieties.—W. van Fleet in Rural New Yorker.

AMERICAN ASSOCIATION OF NURSEYRIMEN

F. H. Stannard, Ottawa, Kan., President; N. P. Stark, Louisiana, Mo., Vice-president; John Hall, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., treasurer.

MARSHALL, Mo.—The National Nursery Co. of Lawrence, Kans., has established an office here with Col. Preston in charge.

AUSTIN, TEX.—The Port Arthur Nursery Co. has been incorporated with a capital stock of \$40,000. Incorporators are Fred Clark, C. E. Smith and R. H. Woodworth.

LOUISIANA, Mo.—Stark Bros., through their assistant treasurer, Wm. H. Stark, have purchased land at Girard, Pa., in the famous New York-Pennsylvania Grape belt. Mr. Stark also purchased for the Company an excellent farm at Marionville, Mo., where he spent several weeks locating the ideal soil of that section for the growth of delicious Apple trees.

Use of the Verhena Shrub

In looking around for a common name for *Caryopteris Mastacanthus* that of Verhena Shrub has been given it, as catalogs show, an appropriate one in some respects for it belongs to the natural order in which the Verhena is found. Horticulturists class it as half shrubby, which term covers such shrubs as die back partly but not wholly in the Winter season. In addition to this it will not endure severe freezings, thriving best when a few inches of its lower shoots are covered in Winter with manure, ashes, leaves or soil, to preserve them through the cold, much as is done in some localities with the more tender Roses. This makes certain of sufficient shoots being preserved to serve as a foundation for vigorous shoots, to give flower in the coming Fall. It needs close pruning to have it make its best display, hence the losing of the greater part of its tops, whether by frost or by the pruning knife, is a good thing as, if alive, they should be cut back to the few inches spoken of.

It is a good plan to have a small plant in a pot indoors for the Winter, so as to afford cuttings for stocks, these rooting with the greatest ease. The flowers of this shrub are of a purplish blue, in flat heads, rather similar to those borne by the Verhena; and when in a pot they make a display that is much admired.

Florists who are on the look-out for new plants for pots for Easter should try this one. It would be a novelty, and one worth giving a trial. As it flowers from strong shoots, resulting from the close pruning it gets, it would require forcing some time ahead of the season as, when outdoors, the flowers are not produced until early Autumn.

Douglasii of the Rockies

While with us of the eastern States the Colorado Douglas Fir, or Spruce, is the one desired, Europeans generally, excepting those in the very coldest countries, prefer the one from the Pacific Coast. The reason is that the Pacific variety is a much faster grower than the one of Colorado and New Mexico, making a serviceable timber tree in much less time than the other—a great gain to the forester.

Although, as a rule, the Pacific one will not flourish even in Pennsylvania there are exceptions, and when the seeds are from trees growing well up in the mountains back of the coast, where they meet more cold, the seedlings from it will live here, as will other trees from the same or similar localities. Foreign lists make much of a difference in color of the foliage of these two varieties of the Douglasii, but to call the Colorado grey or blue, as some do, is overdoing it. Its foliage is as green as any ordinary evergreen, greener than a great many, still the Pacific one may be still greener. Then as to the rapidity of growth, the Colorado one is one of the fastest growing of hardy evergreens, young trees of but 4 to 5 ft. high making an annual growth of 2 ft. in their leaders, often, and more than this when older and in good soil. While our foresters here are calling for all sorts of seedlings for forestry planting the wonder is that none have set out the Douglas Fir, in view of the fact that it is one of the most valuable of timber trees and as rapid a grower as any other tree useful in the same way.

European foresters have been alive to the value of this tree for many years. A quarter of a century ago the foresters of Germany were setting out this tree, adding to their useful forests, while we were depleting ours by waste.

The time is here when those of our nurserymen who have a stock of useful seedlings will reap a good harvest for their pains, for forests must be created anew with us.

Evergreen Andromedas

The two *Andromedas* somewhat common in plantings, *floribunda* and *Japonica*, make excellent pot plants for Easter if potted soon after New Year's, or even later if they have good balls of soil with the roots. The foreign nurseryman, who make a business of growing these and similar desirable plants for supplying our wants, see to it that they are shipped with a nice ball of soil to each plant. This is the making of successful transplanting, as when the plants reach this side of the Atlantic the roots are in a measure undisturbed, so that there is only the little check the week or two of being boxed up gives them. Such good plants, if well set with flower buds, usually comes in such good condition that forcing can be commenced at any time.

These *Andromedas* are beautiful when in flower. They bear loose clusters of flowers, white in color, which are well set off by their dense, green foliage, and after flowering they can be planted in the garden, if desired, being quite hardy.

Many of the deciduous *Andromedas* are used in great quantities by landscape gardeners. A *Mariana*, one of the hardy northern species, is noted for the great beauty of its bell-shaped flowers. It is the best of all the deciduous species.

Pinus Edulis Pinyon Pine

Pinus edulis Pinyon Pine

The Pinyon Pine, as *Pinus edulis* is called, is one of the best known Pines of the Pacific Coast, its fame being due to the value of its nuts to the Indians, in the first place to the beauty of the tree in its habit of growth, and its usefulness as a timber tree.

The nuts have been an article of food with the Indians since the beginning it would appear, for it was observed on first acquaintance with them; that they still gather them is shown by the statement of collectors who sometimes have been saved the trouble of getting them from the trees by procuring them from the Indians. The nut itself is fairly large, and has a thin shell, so that it can be broken by finger and thumb.

As a rule, the Pines of the Pacific States do not thrive in the East, but among the few that do is the one of our notes, *P. edulis*. It appears both hardy and satisfied with the climate, though it must endure more cold here in Pennsylvania than it does in its native home.

It is a great satisfaction to find our best landscape gardeners demanding more of these evergreens than they have done in the past; the trouble has been that young plants could not be procured. European nurserymen engaged in the work of growing seedlings for the American trade are now offering *Pinus edulis* among the rest, and importers will be looking for it, as it is a fast growing, bushy and beautiful Pine. We need more of our native evergreens in our plantings mingled with the useful European sorts.

Uses and Value of the Tulp Tree

Among the trees which have come prominently into notice for forestry purposes is the Tulp Tree, *Liriodendron tulipifera*. It is of great value in the production of paper, the pulp mills in many parts of the country using it in great quantity. Additionally it is one of the best park trees we have, and on extensive places a group of them are a striking feature. The tall growth, together with its smooth green bark when young, its shining green leaves and handsome tulip-like flowers, impart to it a character distinct from all other trees. Some of the grandest trees of our forests are the *Liriodendrons*, old specimens measuring 20 to 25 ft. in circumference at a point near the ground. Especially do they attain large size when in wet ground.

The conelike seeds of this tree are familiar to many, being conspicuous in the trees in late Autumn. Each cone has a dozen or two of seeds in it, but it is rare that as many as one half of them are perfect, so that, in a pound of seed, perhaps not half the quantity would be found sound. These seeds require sowing in Autumn, otherwise if kept dry and sown in Spring they remain a whole year before sprouting although stratification—mixing the seeds with damp soil through the Winter—is as good as sowing them early would be.

White-Flowered Judas Tree

There is always a doubt in the mind of the catalog compiler whether to class the *Cercis Canadensis* as a tree or a shrub. It has long been called the Judas Tree, and when in its wild state one does see it of tree size, that is 20 ft. and sometimes taller, but when in groups often a bush growth is what they make. The battlefield of Gettysburg is, or was, a home for this Judas, and the trees were mostly of a bushy growth. Anyway, it seems that as there are tree-like specimens to be found we may as well adhere to the old term of "tree."

Some years ago the Japanese species, *C. Japonica*, was introduced; and this is surely but a shrub in growth. But it is an uncommonly beautiful sort, the flowers, though pink, as are those of *Canadensis*, all of a deeper color and larger, making of the bush when in flower one of the attractions of Spring.

A third addition has been made of late, a white-flowered variety of the *C. Canadensis*. This makes a good one to set with the others, to help the effect, as with all three together the combination is good; but when the white one is growing alone, although the blossoms are numerous they are so small that the effect is not great. Being but a variety it could not be depended on to come true from seed, but would require to be grafted or layered to get up a stock of it.

Flat Trained Fruit Trees

Many gardens of the wealthy in our midst, which are under the care of gardeners who have had a European training, contain specimens of fruit trees trained in a flat shape, espaliers, as some term them. These trees are started to grow horizontally when young by training them to wires, stakes, and such contrivances and, when the branches are set in the direction desired, the trees are planted in orchards or in vegetable gardens, often one tree after the other to make a division the whole length of a walk.

This form of tree is often used in European gardens, and those who have introduced them here merit praise, for such trees are both useful and profitable. Often, where a walk runs through a garden, they can be planted a row on each side, defining the division, and adding to the attractiveness of the whole. These trees, as grown in Europe, receive annual prunings. This is necessary not only to keep up the flat shape of the tree, but also to promote fruitfulness. The pruning is given once a year, in Mid-summer, or before the growth for the season has ceased. Lots of branches are cut away entirely, of course, others pruned in well, which operations cause the free setting of flower buds, because of the check to growth the close pruning causes.

In many respects such fruit trees are better adapted for planting in a vegetable or other garden than standard ones. The flat trained ones do not cast the shadow so far over the garden the others do; in this way it is possible to grow vegetables or flowers much nearer the trees than otherwise.

It is probable that if nurserymen would keep a stock of these on hand, small ones, so that there would be no great trouble in packing them, there would be awakened a good demand for them; the trees to be an assortment of all kinds of fruits now common in orchards.

[Mr. Meehan's recommendation has great merit. For any vegetable garden, small or large, the trained fruit tree is to be highly recommended, not only for its value as a food producer but because of the decidedly attractive appearance it gives to the garden.—En.]

The Grenoble Walnut is a name belonging to a single variety, having a particularly soft shell and a fine flavored nut; but as a rule all imported nuts of the Walnut are called "Grenoble" by commission houses.

California is the great Walnut State at this time, but anywhere from Philadelphia southward the tree flourishes, and those interested should plant only the improved sorts, which have been increased by grafting on the common seedling stock.

Last Fall

Ribsam's Reputation

MY OUTPUT OF CALIFORNIA PRIVET WAS GREATER THAN EVER BEFORE.

Orders booked now daily. Owing to bushiness and fibrous roots my plants are far above the average grade sold by others at less prices; just one order will enroll you as one of our regular patrons. Thanking all for past favors.

THE EXCHANGE—Best Advertising Medium

CLUBS and SOCIETIES

G. and F. Club of Boston

The next meeting of the Club will be on Feb. 15. A paper will be read by S. J. Goddard of South Framingham on "Carnations." This will be "Carnation Night" and a large audience is expected. In former years we have always had more than two hundred present. Let us beat the record this year. Don't think that we know all about Carnations yet; the study of them is only in its infancy. When the Mendelian law is better known the present Carnations won't be in it.

There are many novelties promised, some not before seen in this city.

The delegation from Boston at the Carnation convention at Pittsburgh is to be present and has promised to tell us about the novelties and principal exhibits of that great show.

All exhibits addressed to William N. Craig, Horticultural Hall, Boston Mass., will be looked after and staged if the owner cannot be present at the meeting.

Florists and others who are not members of the Club are cordially invited to attend this interesting meeting.

R. C.

Monmouth Co. (N. J.) Hort. Society

A meeting of this Society was held at Oceanic, N. J., on the evening of January 28, with President Wm. Dowlen in the chair. Nothing but praise was heard from all the members as to the success of our annual dinner, which was up to high standard of previous years or, if anything, better. The dinner committee is to be congratulated for their painstaking efforts towards making the event one grand success; also to the Sheridan Hotel for carrying out the committee's instructions to the letter.

There were 80 present and I feel safe in stating that everyone thoroughly enjoyed the jolly event. A. Herrington of Madison, N. J., acted as toastmaster, and proved to be the right man in the right place, keeping things lively from start to finish. Madison (N. J.) and New York were well represented, also our neighboring society of Elberon.

Several new names were handed in at the meeting.

Friday evening of Feb. 4 will be set aside solely for the purpose of entertaining the ladies—our ladies night, also an annual event. It will start with progress in the evening, the members procuring suitable prizes for the occasion. Refreshments will be served and a dance follows.

A committee of three was present from the Monmouth Fair Association, which seeks our co-operation at the time of holding their Annual Fair, next September, with the intention of making horticultural exhibits one of their leading attractions and famous throughout the State.

W. T.

Tuxedo Park (N. Y.) Hort. Society

For many years there existed in Tuxedo Park a flourishing horticultural society with a good membership and a substantial fund in its treasury. For reasons not very well known this Society, about two years ago, ceased to hold meetings and exhibitions. It is known that there are in the Park many very beautiful and extensive estates, superintended by as bright and able a lot of gardeners as may be found anywhere, it will not be wondered at that the need of an active horticultural society gradually became so acutely felt that something happened; with the result that the old Society is up and at work again as bright and lively as it ever was.

A meeting of the old officers and members of the Society was held recently, when it was voted to resume fortnightly meetings. In order to increase the membership the acting secretary, Mr. James MacMachan, was requested to issue application blanks to every one presumed to have an interest in the Society. Its financial condition is excellent; in fact, it is astonishing that a Society with no more members than this one had, could have so large a sum (\$600) in its treasury at the time it ceased to hold meetings which, however, goes but to prove that in at least one of the very important essentials those in charge were not lacking.

When we realize that during the years of its activity the work done included one or more creditable exhibitions and many lively and fruitful meetings each year, we can understand that in every way the Society was doing a good work along the lines laid out for it.

There is, therefore, every reason for us to believe that, with the old Society on its feet again and a strong contingent of new members willing to help to push it along, a bright future is in prospect for the Tuxedo Park Horticultural Society.

Tarrytown (N. Y.) Hort. Society

At the regular monthly meeting of the above Society, held in their rooms, Jan. 28, after routine business had been transacted, the matter of the Fall show was taken up and the dates fixed for November 1, 2 and 3. The committee appointed at a former meeting to make inquiries regarding a suitable place for the show reported that the Tarrytown Hall could not be had but that very suitable arrangements could be made for the Irvington Town Hall. They reported this as being equally as large as the Tarrytown Hall and even better suited for the purposes of a flower show. On their recommendation it was decided to hold the show there. Mr. John Brunker, gdr. for I. M. Seligman, Esq., Irvington, N. Y., was appointed manager of the show.

The monthly prize, for two plants of Cyclamen, was won by Mr. James Stuart, gdr. for Mrs. F. A. Constable, Mamaroneck, N. Y., with splendidly grown specimens. So highly did they appeal to the judges that they recommended the awarding of a cultural certificate in addition to the regular prize; and vote the certificate was unanimously awarded. Mr. Stuart then gave his methods of raising Cyclamens. This will be found on another page.

At the next meeting of the Society the subject is to be Roses, the monthly prize being offered for a vase of twelve other than American Beauty. Mr. M. Hendry, gdr. to W. A. Road, Esq., Purchase, N. Y., will give a talk on Rose culture.

For the March meeting, the prize is offered for three varieties of forced vegetables. **WILLIAM SCOTT**, Corr. Secy.

Florists' Club of Philadelphia

The regular monthly meeting of the Florists' Club of Philadelphia was held February 1, and was well attended. After the business session, a paper was read by A. Fahrenwald on "Why a Rose Grower should join the American Rose Society," which was well received, and upon motion was accorded a unanimous vote of thanks by the members present. After the reading of the paper (which is printed elsewhere in this issue) considerable discussion was indulged in by Chas. Meehan, Leo. Niessen, O. J. Thillow, Geo. Watson, Robt. Kift and others, and many interesting points were brought out relative to the small amount of interest in the hybridizing of Roses, and the trying out of the new varieties, by the average grower. As to whether the Rose or the Carnation was the most popular flower opinions varied considerably, but the majority thought that the Rose was the greater favorite, although its close competitor was a near rival. Because one grower in a community could not make a new Rose variety pay, his failure was generally accepted as meaning that the variety was no good, and as such news travels rapidly, such variety was soon relegated to the rubbish heap; if every grower would try for himself, and give the newcomer all possible chance, it was agreed that there would be on the market many more varieties of Roses, than are seen today. The raising of Roses from seed, the elimination of the bad stock, and growing on and establishing of new varieties, was no small task, and one in which a deal of labor and expense was involved, while the final perfecting of exhibition blooms from these seedlings was a job which few growers cared to undertake. The rapid strides into popular favor which the two Killarneys have made, was cited as an instance, and although the variety made a poor showing at the start, it has proved that when growers understood its nature, it was as profitable a Rose as could be grown today.

The retailers came in for their share of criticism but Mr. Kift ably defended the retailers by saying that all first-class stores were willing to handle the greenhouse products, providing they could be produced at a price reasonable for the demand, and the keeping qualities were such as to recommend them to the store patrons. Mr. Fahrenwald thought it strange that no attempts had been made to improve on the American Beauty, saying that a Rose of that class having the same perfume, but with the color of a Richmond, would be welcomed by the trade in general. Mr. Thillow lamented the fact that most of our newer varieties had to be imported from other countries, and spoke of the large field in America for the hybridist, in which to produce American raised seedlings.

Mention was made of the coming meeting of the American Rose Society in New York, on March 16 next, Mr. Fahrenwald agreeing to take care of any who would make up a party to attend the convention, either as exhibitors or visitors. At the next meeting a paper will be read by A. M. Herr of Lancaster, Pa., on "The Carnation," which should prove to be more interesting as following so closely on the recent Carnation Convention in Pittsburgh, Pa.

F. E. Best Advertising Medium—Alive and Up-to-date

AMONG THE GROWERS

Lehning & Winnefeld, Hackensack, N. J.

This firm has been very successful with pot grown Carnation plants, the variety handled by it proving very adaptable for the purpose. It is a seedling raised by the firm, and grows about 12 to 15 inches high, plants having as many as 12 blooms on at one time, besides numerous buds. These plants have been largely handled by the prominent retailers of New York City. The color is deep rose pink and a red sport from it will be propagated and grown into salable plants for next season. Three plants, grown in an 8" or 9" pan, sell at wholesale for \$1 and \$1.50. The firm has a number of these plants which will be ready for Easter, and it is the present intention to disseminate the variety among the trade next Fall. The firm is also growing about 6000 Easter Lilies, giganteum and Formosum being the two varieties most prominent. But very little disease has been seen in the bulbs secured, and only about 5% will be discarded.

Twenty-five thousand Cyclamen seedlings are growing on, to be ready for next year's crop, a product for which the firm has become well known. Many varieties of Nephrolepis are also handled, and Begonia Gloire de Lorraine, Poinsettias, Ardisias and Alternantheras are grown extensively.

John Birnie, West Hoboken, N. J.

This establishment is a marvel of productiveness and a visitor can see at a glance that an experienced hand is at the head of affairs. Mr. Birnie has growing several thousand Carnation plants, which are now in excellent crop, including such varieties as Queen, Fair Maid, Enchantress, Harlowarden and a few others. The two first named varieties, while not new by any means, have proved so satisfactory that unless something unforeseen occurs, they will form the staple kinds for the next few years; although the flowers produced are not as large as those from some varieties recently introduced, the productiveness is about three to one, and this is an important factor; besides, the popularity of Fair Maid among the local florists is warranty enough to continue growing it on.

Preparations are now under way for the growing on of thousands of Geraniums, Heliotrope, Fuchsias, Petunias, Verbenas, Stocks, Mignonette and other bedding plants for which Mr. Birnie finds a ready sale in the New York Plant Market and other places, and his products are such that each year finds him sold out.

Thousands of plants of English Ivy in 2½" pots are handled yearly by Mr. Birnie, these being shipped to all parts of the country.

Mr. Birnie is well known among the trade of New York City, chiefly for his untiring efforts to secure a permanent plant market, a project in which he is still deeply interested, and he hopes some day to see his efforts, as well as those connected with him in the matter, rewarded.

The time is not far distant when Mr. Birnie's property will be divided by having a street cut through it, which will take away a part of the Carnation house, but it is intended to tear the whole structure down and rebuild away from its present location. After the street has been made one section of the property will be divided into building lots.

A. H. S.

Henry A. Dreer, Riverton, N. J.

Preparations are under way at this establishment for an unprecedented Spring trade. With this in view, propagating of the many varieties of bedding stock is in full swing, and it will be hard to find an establishment which carries so complete a list of plants as the firm's recently issued catalog calls for.

A walk through the greenhouses reveals all kinds of stock, and includes many varieties of Geraniums, Heliotrope, double Petunias—for which the firm enjoys a country wide reputation—several new varieties of Coleus, vines for hanging baskets, and many other plants useful to every florist. The bulb department is stocked with a fine grade of Gladioli, tuberous Begonias, Gloxinia, Canoe and Dahlia bulbs, all true to name; and no expense is spared to keep the varieties from becoming mixed, as an elegant yet simple system is worked out in this department.

Several thousand hardy Ferns for use in ferneries, have recently been transplanted to flats, in readiness for Spring orders, this department alone furnishing labor for several men during the entire Summer.

In the herbaceous department, digging roots of every variety of plant in the field is under way, the recent mild weather enabling the men to execute this work, a job which, owing to the immense amount of snow on the land, would have been a serious undertaking but for favorable weather which caused the snow to melt away.

The Hardy Rose department is a hive of industry, and the many thousands of hybrid and other Roses, being potted up are, to the uninitiated, a marvel, and wonder is where they all go. The firm has found that pot-grown Roses of every variety prove great successes to the purchasers, more so than the sending of a dormant stick with a label attached, and the idea is meeting with greater success yearly. The plants are dug, pruned and potted, then placed on the floor in a cool house, each plant having the variety name wired on. They are then watered thoroughly, and allowed to make roots and develop top growth slowly. Cold frames, having the sash raised, and boarded on all sides to keep off the cold winds, with mats on the glass, are also used to accommodate some of the stock, the pots being plunged into the soil. By this method florists can readily see that by early Spring Al stock is produced. Referring to the popularity of this class of stock, an order for several hundred plants was received last year, and in order to send plants to reach the purchaser in good condition a box car was arranged for, in which two shelves were built, and the plants were packed (in pots) in this, thus making three tiers. The shipment arrived at its destination in very satisfactory condition, enabling the recipient to plant the Roses immediately; and although perhaps, the first cost was a trifle more, the established plants proved a wise investment, as all the plants flourished without experiencing any setback.

In the Palm and Fern department, which includes all foliage and decorative plants, the stock grows apace, and despite the immense quantity disposed of it is so managed, that other plants are coming along to fill up the gaps, so that it can reasonably be said, the firm can fill any sized order at any time.

The California Rose Co., Pomona, Cal.

In the propagation of Roses under glass it must be borne in mind that wood ripened under glass roots more readily than that grown outdoors, but Mr. C. E. Howland, president and manager of the California Rose Co., begins his work on wood, grown in his twenty acre field, about June 1, and continues until about Sept. 15, in a

manner entirely different from any other I have seen, and that, too, with so little invested in the propagating part of the establishment as to be surprising to the old orthodox growers. Entire frames, 6x100 ft., showed 98% of a strike; even those varieties considered most difficult to root showed 80% rooted cuttings. These statements are not from someone else, but are made from my own observations, on different visits to the grounds of this establishment.

The field itself, 20 acres, almost as level as a floor, about an inch fall to every hundred feet, is set solid to Roses every Spring, with plants out of three-inch pots, the rows as straight as an arrow. The majority of the plants are Teas, or of that class, and begin to bloom as soon as they get hold of the soil. The buds are picked off until June, when the plants have made a foot or two of growth, then the wonderful sight begins and is kept up until October or November, according to how soon the rains set in. Twenty or twenty-five thousand Kaiserin Augusta Victoria are in contrast with the same number of the brilliant Gruss an Teplitz, followed by eight or ten thousand of the soft, beautiful colored Winnie Davis, which in turn is followed by the wonderfully floriferous and fragrant Duchesse de Brabant. It is not necessary to extend the list of varieties further. Rosarians will understand when it is said that the field is one solid mass of foliage and flowers. These lines are written for the benefit of southern California nurserymen, who have never seen this field of wonderful beauty, as well as for the information of the less fortunate members of the craft whose privilege it has not been to visit this land of wonders. The fact is that in all my journeyings in these United States, covering a period of half a century, my eyes have never beheld a sight equal in beauty and perfume as is presented by the half million young Roses each season, when in bloom, at the grounds of the California Rose Co.

P. D. BAERHAET.

Among the Nurserymen

DOVER, DEL.—The American Pecan Co. has been incorporated to engage in a general nursery business and nut culture. The incorporators are Wilmington charter representatives, and the capital stock is \$500,000.

WASHINGTON, D. C.—Regret has been expressed by the president and by Mrs. Taft because the 2000 Japanese Cherry trees, presented by the municipality of Tokio to this Government, have been found to be infected with root gall worms, certain fungus diseases, and insect pests. The trees were to have been planted in Potomac Park, but the Secretary of Agriculture has found it necessary to recommend the destruction of the trees.

OLYMPIA, WASH.—The Supreme Court has decided in favor of defendants in the Spokane case of the Inland Nursery & Floral Co. against H. C. Rice, J. H. Mumm and E. L. Rice. The action was brought to cancel and hold void for fraud, stock held by the defendants. Rice & Mumm were engaged in the floral business at Spokane and organized this company with \$50,000 capital and so sold their business and good will to the corporation for \$25,000 paid up stock. Others were induced to invest \$17,000 cash in stock of the company. It was claimed by plaintiffs that the business, instead of being worth \$25,000, was worth less than \$2000. It made no difference, said the Supreme Court, what the actual value of the property was so long as the corporation gave its stock in payment, and it cannot now claim the deal was one-sided nor can new stockholders complain.

New York

Business among the retailers has been very good the past week, and the orders already booked for the remaining days of the social season will create more activity than usual. Decorations of all kinds are going on, and while no big events are looked for, the aggregate of material will be considerable.

Spring flowers are freely used in the uptown stores for window decorations. Thorley's House of Flowers is a veritable bower of beauty. Among the flowering plants seen this week are Crimson Rambler Roses and Hydrangea Otaksa in full bloom; these, together with Azaleas, Acacias, Ericas, and pots of Spring bulbous stock make a very fine window decoration.

Alex. McConnell's store window was decorated this week with a fine display of Beacon Carnations, in a large glass vase, surrounding which were potted plants, in bloom, of Apple and other flowering shrubs, besides fancy boxes filled with various colored Tulips.

A branch store of the Boston Flower Shop, 34th st. and Lexington ave. has been opened at the entrance to 509 Fifth Ave., at which place a large display case filled with cut flowers attracts the public; plants and other floral necessities are sold from a stand in the hallway.

G. Bradshaw has moved his office from the store of B. S. Slinn and is now located on the second floor of the Coogan Building.

E. Persson, grower for Mr. Fengar of Irvington, N. J., is sending to the cut flower market some white Perfection and Enchantress Carnations that show excellent culture. These flowers are select stock and arrive packed fifty in a box; needless to say that the demand for them is good.

Wm. Hanft, of Young & Nugent, 42 W. 28th st., has a decided novelty for St. Valentine's Day. It is a wire frame on which various flowers are fastened; the shape is conical, the top forming a cover which, when opened, discloses a bunch of Violets, candy or fruit, according to the taste of the sender.

Anton C. Zvolanek of Bound Brook, N. J., has settled his claim for damages for \$1200 on account of the recent accident when he was run into by an automobile, his vehicle demolished and himself bodily injured. Mr. Zvolanek returned on Tuesday from his trip to California. He returned by way of Mexico and says he had a most enjoyable trip. That it

THE PUBLIC APHINE TESTS

held in New York in December, and in Boston in January, have given such satisfactory results to the manufacturers of Aphine, that another test will be held in Philadelphia on Lincoln's Birthday, February 12th, 1910.

Further particulars in next week's issue.

If you are not familiar with the new insecticide discovery APHINE, send for descriptive circular.

If your supply house does not yet handle APHINE, write us for names of nearest selling agents.

APHINE MANUFACTURING CO.,

Madison, N. J.

suiting him may be judged by the fact that he added 12 lbs. to his avoirdupois. The Astoria Florist of 2208 Broadway has opened a branch store at Broadway and 53d st.

In our report of the convention of the A. C. S. at Pittsburgh the telegraph wire made us say that "John Boone" was one of the judges. Of course, everybody knows that this meant John Birnie. John Reimels of Woodhaven, who was taken seriously ill at Pittsburgh last week, necessitating his removal to the South Side Hospital there was brought home on Sunday by Mrs. Reimels. His illness was supposed to be pneumonia, but later was diagnosed as acute stomach trouble. Latest reports are that his condition is improving.

Recently we stated in these columns that the building in which is located the store of Geo. Saltford, was sold. That was an error and we now make correction. The buildings sold were Nos. 37-39-41 W. 28th st.

C. C. Trepel of Brooklyn, and also at Bloomingdale's, is offering weekly sales of Violets, he having placed orders for many thousands the past few week ends. This is a great relief to the wholesale market, as with such orders, a general clean up is possible. Carnations also meet the same method of disposal.

Several shipments of badly bruised Cattleyas were received this week in the wholesale district, a fact which spoils the sale of the flowers entirely.

Florists' Club Exhibition

At the next meeting of the New York Florists' Club, Feb. 14, the following prizes will be awarded: First prize for the best exhibit of Carnations; second prize for novelties sent out in 1908-'09, not less than 25 flowers of one variety; third prize for the best 50 Carnations of any variety. These prizes are offered by Reed & Keller, Stump & Walter Co., and Vaughan's Seed Store. All exhibits should be sent in care of Walter F. Sheridan, 39 West 28th st., who will see they are properly staged. The essayist of the evening will be Mr. W. H. Taplin, on "Carnations." Ladies are invited to attend this meeting.

Baltimore

The next meeting of the Club is expected to be a banner event; it will be a "Carnation" affair.

The cut flower market is still as fair as could be expected, considering the disagreeable weather we are now experiencing; it is cloudy nearly every day, naturally keeping the blooms back; there seems enough stock on the market to meet the demand, however, excepting in Roses. On Friday we had a heavy snow-storm, doing thousands of dollars damage to ornamental trees and shrubbery in some sections. Telephones were out of commission for a while and the roads in fearful condition. At present writing weather has changed and it will, no doubt, bring out blooms once more.
